In limiting the size of the board to seven members, it was regrettably necessary to leave off representatives of organizations which have performed valuable services to the minority communities surrounding the project. But in order to assure that the board is compact enough in point of view to be a dynamic and forceful body, its size is limited to seven members. The broad consulting authority of the center will provide for involvement of all organizations who can contribute significantly to the advancement of minority interests.

It is clear that the Minority Resource Center must maintain a focus on the programs and policies which directly re-

late to the construction and operation of the Tennessee-Tombigbee project if it is to be an effective force in the ultimate design of the project. It is equally clear that a substantial part of the problem and opportunity for minority participation involves the economic impacts of the project which derive from secondary project benefits such as the growth of the construction industry in the area and the establishment of industrial and commercial facilities through public and private investment encouraged by the project.

For this reason the center is charged to oversee the planning and policies directly affecting the distribution of project benefits among minority communities, to evaluate the involvement of minorities in organizations which control or influence decisions regarding project design, construction, and operation and decisions which affect the distribution of secondary project benefits, and to submit to Congress and the Secretary of the Army its findings with regard to the adequacy and effectiveness of these programs and policies.

This range of responsibilities should assure that while the project focus of the center is maintained, the range of impacts from the project which the center considers should be comprehensive rather than narrow.

In describing the purposes of the center the proposal sets forth that the center shall "oversee" minority involvement in the construction and planning of the project. While the center is not given direct authority or jurisdiction over the agencies and organizations which have charge of the construction or planning of the project, the term "oversee" is meant to indicate that the center should actively involve itself in influencing the course of the project through routine interaction with those agencies and organizations.

The Tombigbee project is already over 20 percent complete and is moving rapidly toward its scheduled completion date. It would be clearly inadequate were the center to view as its mission simply to monitor the progress or the lack of progress in the accomplishment of minority goals so that it could report findings to Congress. That is an important part of the center's function to be sure, but beyond that the center should provide immediate input and guidance where possible in an effort to influence policies and programs toward better utilization of and service to the minority community as quickly as possible.

Mr. President, the amendment provides that the costs of the center and the corps' training effort will not be charged against the costs of the project. This is done because neither are the benefits of minority advancement and training attributed to the project. I believe that this is an indication of an inadequacy in the benefit cost analysis of this project and others subject to such analysis. Should this matter be corrected, of course, these costs might then be properly attributed to the project.

● Mr. SASSER. Mr. President, I am proud to support and to cosponsor this amendment authored by my senior colleague, Mr. BAKER. It is time that Congress recognized the unique needs of the people in the area affected by the Tennessee-Tombigbee project. The human Resources Center will fill a need which we have come to recognize clearly in the past several years. That need is to assist the residents of Tennessee, Mississippi, and Alabama in taking full advantage of the opportunities that this project offers.

To this end, I am particularly pleased that the amendment call for "such branch offices as are necessary to serve as information clearinghouses * * *" Further than that, I wish to encourage the center, when formed, to establish one or more mobile information centers in order to bring the opportunities to those people in the most isolated parts of the project area. With an "information van," the message of the center could be affirmatively and aggressively brought to all the people of the region.

I wonder if my distinguished colleague could comment on whether or not he considers the concept of mobile information centers within the meaning of branch offices as that term is used in this amendment.

Mr. BAKER. I thank my colleague for bringing the possibility of mobile "branch offices" to my attention. Indeed, I do think that mobile information centers could be usefully deployed in the project area and I consider the language of section (d)(1) of the amendment broad enough to provide for such vehicles.

Mr. SASSER. Mr. President, mobile information centers would do several things which are not now being done. First, they would provide visibility for the efforts of the Government to provide the opportunities which the region has not previously had. Second, they would provide accurate information about the project. Third, used effectively, they would reduce the need to establish large numbers of small permanent offices of the Human Resource Center.

I thank my colleagues and I look forward to the establishment of the Human Resource Center and the good which will come from it.●

Mr. GRAVEL. Mr. President, I have no problem with the Senator from Tennessee's amendment and, therefore, yield to my colleague.

Mr. DOMENICI. I have no objection to the amendment proposed by the senior Senator from Tennessee.

The PRESIDING OFFICER. Does the Senator from Tennessee yield back the remainder of his time?

Mr. BAKER. I yield back the remainder of my time.

The PRESIDING OFFICER. Does the Senator from Alaska yield back the remainder of his time?

Mr. DOMENICI. I yield back the remainder of time on behalf of the Senator from Alaska.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment of the Senator from Tennessee.

The amendment was agreed to.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. DOMENICI. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. I thank the distinguished managers of the bill.

UP AMENDMENT NO. 1275

(Purpose: To increase the authorization on a navigable waters weed control program)

Mr. CHILES. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Florida (Mr. CHILES), for himself and Mr. STONE, proposes an unprinted amendment numbered 1275.

Mr. CHILES. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the proper place in the bill insert a new section as follows:

SEC. . Section 104(b) of the River and Harbor Act of 1958, as amended by section 302 of the River and Harbor Act of 1965, approved October 27, 1965 (79 Stat. 1093), is amended by striking out "$5,000,000" and inserting in lieu thereof "$6,900,000".

Mr. CHILES. Mr. President, I am introducing today for myself and Senator STONE, an amendment to H.R. 8309 which would increase the limitation on appropriations for the Army Corps of Engineers Aquatic Plant Control Program (APCP). Congress established this continuous Federal-State cost-sharing program in 1965 (under provisions of the Rivers and Harbors Act, P.L. 89–298) to help States deal with their aquatic weed problems. At the present time 19 States participate in the program and receive Federal research and operational assistance to supplement their efforts in meeting the problems caused by aquatic weed infestations.

In 1965 it was estimated that the annual cost of carrying out such a weed control program would not exceed $5 million, and so under the APCP authorization the corps' budget is limited to $5 million a year. Since, 1965, however, the costs associated with weed infestations have continued to increase due to a new weed species being introduced into the country and the rapid spread of aquatic weed problems. Florida presently has 200,000 acres of weed infested waters and is spending between $12 and $14 million annually in State funds for aquatic weed research and control. In the past incidences of aquatic weed infestations have been considered State, or, at best, regional problems, but there are weeds in our country now that have the potential of becoming serious problems nationwide. Each year more lakes, rivers, and streams become clogged with weed pests which seriously affect water sports, recreation, industry, and irrigation. In light of the scope and size of the national weed infestation problem, it is necessary to review the statutory limit on appropriations for the corps' aquatic weed program.

In February of this year, the Corps of Engineers came before the Senate Public Works Appropriations Subcommittee

to discuss the 1979 budget request. At that time the aquatic plant control program was discussed and questioning brought out that, if the authorization were increased, the corps capability for aquatic weed control would be $6.9 million. This adjustment is necessary in order to insure the continued effectiveness of the aquatic weed control program.

Mr. President, this amendment would increase the limitation on the appropriation for aquatic weed control from $5 million to $6.9 million. That is all it does.

I have discussed it with the managers of the bill.

AQUATIC WEED CONTROL AMENDMENT

● Mr. STAFFORD. Mr. President, the amendment offered by the Senator from Florida (Mr. CHILES) would increase the authorization on the navigable waters weed control program from $5,000,000 to $6,900,000 annually. I support the Senator's amendment. I am informed that the higher authorization figure contained in the bill conforms with the Army Corps of Engineers' stated capability.

Mr. President, I would like to say that what first brought this matter to my attention is the aquatic weed control problem on Lake Champlain.

While the Corps of Engineers has concentrated its attention and funds in the Southern States, where the problem has been more severe in the past, the problem of aquatic weed control is developing in Northern States as well. In fact, if not checked early the problem will continue to grow until it approaches conditions in the South.

Therefore, I urge the Corps of Engineers to pay more attention and funds to aquatic weed control in Northern States for if we are not careful the problem will grow and become more difficult and expensive to control.

Lake Champlain is an example where I believe attention should be directed.●

Mr. DOMENICI. Mr. President, we have no objection to this.

Mr. CHILES. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Does the Senator from New Mexico yield back the remainder of time on behalf of the Senator from Alaska?

Mr. DOMENICI. I yield back the remainder of the time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Florida.

The amendment was agreed to.

The PRESIDING OFFICER. Does the Senator from Florida wish to make a motion to reconsider?

Mr. CHILES. No.

The PRESIDING OFFICER (Mr. STEVENSON). Who yields time?

Mr. STEVENS. I yield myself such time as I may need.

Mr. President, I have presented an amendment for consideration by the Senate during the debate of H.R. 8309, the Navigation Development Act of 1978, which would authorize the U.S. Army Corps of Engineers to initiate a study on the Erosion Control Project in Bethel, Alaska. This project is desperately needed to protect the property and lives of the people who live in this growing community in Alaska.

The Senate Environment and Public Works Committee directed the Corps of Engineers to reexamine the problems in Bethel. The erosion in Bethel has been reviewed by State, local and Federal agencies, numerous times. It is now time to act on a situation that can only get worse if it goes uncorrected. The Senate needs to instruct the corps to begin the study of the project. A simple directive from this body would be sufficient.

Bethel is located approximately 80 miles above the mouth of the Kuskokwim River in southwest Alaska. The population of the greater area is about 8,500 with 3,000 people residing within the city limits. Bethel serves as the principal trading center in the Kuskokwim and Lower Yukon River Basins. It is also the transportation hub for a large portion of western and interior Alaska, for both air and waterborne traffic. Also of prime importance are: a new $37 million hospital now under construction, and a recently completed $1.6 million dock. There has been vast investment by the people of Bethel in their community. Not to be diminished, the Federal Government's share in the need to protect Bethel is not minimal.

The right bank of the Kuskokwim River at Bethel has been continuously eroding since 1939. In 1970, the erosion rate normal to the bank, was 12 feet per year in front of the town, and 15 to 20 feet per year in front of the U.S. Public Health Service hospital and the Standard Oil tank farm. The erosion is due to the river channel. During the high spring runoff period of 1977, the erosion rate accelerated and was estimated at 10 feet per week in the vicinity of the hospital and tank farm. In an effort to contain the erosion rate, the State, city, and private interests have constructed timber bulkheads along 3,000 feet of the river bank. However, the bulkheads were ineffective. The river undermined the bulkheads and most of it collapsed and washed away.

The people of Bethel have made a commitment to save their town. The Federal Government can do no less.

The increased rate of erosion all along the river front of Bethel has prompted the local interest to request assistance from the Corps of Engineers, and their congressional delegation, to help find ways of protecting the eroding river bank. It is estimated that protection of 10,000 feet of river bank would preserve existing lands, obviate moving buildings and oil storage tanks, and protect the vital medical docking facilities.

I am today asking my colleagues to join me in passing this amendment, in the form of a resolution, which would instruct the Corps of Engineers to initiate a study of the erosion project in Bethel to determine the benefits that it would provide. This study should be completed in 2 years with a report to be made to the Senate Committees on the Environment and Public Works, and the Senate Appropriations Committee.

Mr. President, I might state that it is an amendment, for myself and my colleague. There seems to be some dispute whether the Corps of Engineers will or will not initiate this study under existing law and the existing resolution that can be adopted by the committees of the Congress.

It is my information they will not do so unless this amendment is adopted. I am hopeful that the amendment will be adopted which is an authorization to conduct a feasibility study at a cost not to exceed $400,000, to be completed within 2 years.

I state to my good friend and colleague from our State that if it is determined that the Corps of Engineers will proceed and will inform our good friend, who happens to be on the floor at this time, the Senator from Mississippi, that there is authority for such an appropriation, of course, I will be happy to have him drop this in conference. But they told us the last time when we tried to get money for this that there was not authority.

I think there has to be authority before our good friend from Mississippi will be able to make the money available to us for the study.

Mr. GRAVEL. I happen to have no problem. I am sure the minority will have no problem accepting this amendment. But we have already done it. I am really at a loss to know why another committee would not recognize that because the Public Works Committee on September 9, 1977, almost a year ago, passed a resolution requesting this exact study.

So there is nothing impairing the ability to get the money to do the project.

We could check with the corps on this between now and tomorrow. If it is not needed, we will not put it in.

Mr. STEVENS. Let us put it in, and the Senator can drop it in conference if it is not needed.

Mr. GRAVEL. I think my colleague will recognize that I would not want the impression left in Bethel that I was not Johnny-on-the-spot in taking care of their interests.

Mr. STEVENS. We are both Johnnies-on-the-spot. We just want to make sure the corps tells us the same thing.

Mr. GRAVEL. The Public Works Committee has already done this, but if it takes redundancy to get the attention of the corps, I do not mind it.

UP AMENDMENT NO. 1276

(Purpose: To authorize an erosion control study at Bethel, Alaska)

Mr. STEVENS. Mr. President, I call up my amendment.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS), for himself and Mr. GRAVEL, proposes an unprinted amendment numbered 1276.

Mr. STEVENS. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 5, insert the following and number accordingly:

SEC. —. The Secretary of the Army, acting through the Chief of Engineers, is authorized to conduct a feasibility study for erosion control improvements on the Kuskok-

wim River at Bethel, Alaska, at a cost not to exceed $400,000. A report on this study shall be submitted to Congress not later than two years following the date of enactment of this Act.

Mr. STEVENS. Mr. President, I yield back the remainder of my time.

Mr. DOMENICI. Mr. President, I say for the minority that we have no objection. If redundancy is the worst thing we have done in this bill today, it would be minimal. So I would not even object on the basis of redundancy.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. DOMENICI. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 1277

Mr. METZENBAUM. Mr. President, I ask unanimous consent to call up en bloc two amendments I have at the desk.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The amendments will be stated.

The legislative cleark read as follows:

The Senator from Ohio (Mr. METZENBAUM) proposes two amendments, unprinted amendment No. 1277.

Mr. METZENBAUM. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments are as follows:

At the appropriate place insert the following:

Section 175 of the Water Resources Development Act of 1976 (Public Law 94–587) is hereby amended to delet the words and sentence after the word "report" in line 4 and substitute in lieu thereof the following: "of the Chief of Engineers dated 30 January 1978, at an estimated cost of $785,000. The Chief of Engineers is authorized to undertake such Phase I studies with funds appropriated under authority of section 101(c) of P. L. 94–587 and upon completion of such Phase I report, to undertake advance engineering and design in accordance with provisions of section 101(b) of P. L. 94–587."

At the proper place in the bill insert a new section as follows:

SEC.—(a) The project for the Caesar Creek, Ohio River Basin, Ohio, authorized by section 4 of the Act entitled "An Act authorizing the construction of certain public works on rivers and harbors for flood control, and for other purposes," approved June 28, 1938 (52 Stat. 1215, 1217), is hereby modified to authorize and direct the Secretary of the Army, acting through the Chief of Engineers, to construct a public water supply system in accordance with the document entitled "Southwest Ohio Water Plan," prepared by the Ohio Department of Natural Resources (April 1976), with modifications as the Secretary deems advisable, at an estimated cost of $19,000,000.

(b) Prior to the construction of the water supply system authorized pursuant to subsection (a) of this section, the Secretary of the Army, acting through the Chief of Engineers, shall enter into an agreement with appropriate non-Federal interests which provides that (1) such non-Federal interests shall repay the costs of construction of such system in accordance with the provisions of the Water Supply Act of 1958 (Public Law 85–500), except that the interest rate shall be established at the water supply rate in effect at the time of initial construction appropriations for such system, (2) such non-Federal interests will provide the Secretary with the lands, easements, and rights-of-way necessary for the Secretary to construct such water supply system, and (3) after such construction is completed, all right, title, and interest of the United States in such water supply system shall be conveyed to such non-Federal interests who shall thereafter operate and maintain such water supply system.

Mr. METZENBAUM. Mr. President, I ask unanimous consent that the name of Senator GLENN be added as a cosponsor of the amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. METZENBAUM. Mr. President, I have submitted two amendments to H.R. 8309, the omnibus waterways bill, to benefit two separate areas in the State of Ohio. One amendment would expedite the dredging of the east channel of the Cleveland Harbor, a project that is vitally needed to help the steel industry in northeastern Ohio remain competitive. The second amendment would authorize the Corps of Engineers to develop a water resources project at the Caesar Creek Reservoir, now nearing completion in Clinton County in southwestern Ohio. Both projects are endorsed by their local Congressmen. Both are needed to stimulate economic growth and development.

At the present time Cleveland Harbor handles more iron ore than any other harbor on the Great Lakes, but it can not accommodate ships larger than a maximum size of 600 feet. My amendment would authorize the Corps of Engineers to complete a phase I study of improvements of Cleveland Harbor as soon as possible, which will include specific plans for the dredging of the east channel. This dredging project would enable major steel companies in the area to import large quantities of ore on 1,000-foot ships at an economical cost to the steel mills.

If this amendment is not adopted, the phase I plan would be delayed for an indefinite period of time and the dredging project could not begin until approximately 1985. This amendment would allow the Corps of Engineers to begin work immediately on the phase I plan and to undertake advance engineering and design plans for the dredging project once the phase I plan is completed. Altogether, this amendment would enable the dredging project to begin possibly as early as 1981, an advance of about 4 years over the standard schedule.

Mr. President, this dredging project is a major part of the overall efforts to improve Cleveland Harbor that are now underway. The Cleveland-Cuyahoga County Port Authority recently announced plans to construct a $20 million ore dock, where ore would be transferred from the 1,000-foot ships to barges which would transfer the ore farther up the Cuyahoga River to inland steel factories. That dock would handle iron ore for Republic Steel Corp. mills in Warren and Youngstown, as well as for the Cleveland mill, which produces 30 percent of the corporation's steel.

Other steel companies, including the United States Steel Corp., the Jones & Laughlin Steel Corp., and others, are also expected to utilize the ore dock in the future. Construction of the dock has been described as one of the most significant projects for northeastern Ohio steel companies in the past 50 years. But the advantages of the new loading dock will be severely restricted if the east entrance to Cleveland Harbor is not dredged deep enough to allow the utilization of 1,000-foot ships.

Together with the construction of the new dock, expected to be completed by 1980, dredging the east channel would save an estimated 20,000 jobs for men and women in Cleveland alone and 15,000 others in Warren and Youngstown. These projects enable the northeastern Ohio steel industry to take advantage of large shipments and to remain economically competitive, a major goal of the Carter administration. It has been endorsed by the northeastern Ohio congressional delegation, the Cleveland-Cuyahoga County Port Authority the city of Cleveland, the steel industry and the Greater Cleveland Growth Association.

The second amendment would authorize the Corps of Engineers to construct a water supply and transmission system at the Caesar Creek Reservoir. In 1979, the corps expects to complete construction of the Caesar Creek reservoir and the State of Ohio has contracted with the Corps of Engineers for water supply storage which will provide 35 million gallons per day.

However, there is no treatment nor transmission system currently available to utilize this water. This project is needed to insure people in that area will have a reliable source of drinking water and to provide water for fire protection. Construction of this system would provide treated water meeting the average demands of the following 15 existing public systems: Blanchester, Clarksville, Fayetteville, Hamilton-Deerfield Sanitary District, Lebanon-Tutle Creek Sanitary District, Lynchburg, Martinsville, Mason, Midland City Westboro Water Co., Morrow, New Vienna, St. Martin, South Lebanon, Waynesville and Wilmington. Harveysburg, which does not presently have a public water system, can also be served. It would also service rural areas of Warren and Clinton counties in the future.

This is not an unusual project for the Corps of Engineers. It has constructed many similar projects in the past. The total cost of the Caesar Creek water supply and transmission system is estimated at $37.5 million, but this amendment authorizes only the $17 million needed for work performed by the corps. That money will be repaid by the water users, as is consistent with Federal policies covering Federal projects of this kind.

I point out, Mr. President, that the House of Representatives has already unanimously passed this authorization once, but that section of legislation was lost during the controversy of the water-

ways bill as it was rewritten. This amendment would restore that authorization and would provide a reliable supply of water to local communities in scuthwestern Ohio. I urge the Senate to adopt both amendments.

I yield back the remainder of my time.

Mr. GRAVEL. Mr. President, I have no problems with this amendment.

I yield to the Senator from New Mexico.

Mr. DOMENICI. We have no objection, Mr. President.

Mr. GRAVEL. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendments of the Senator from Ohio.

The amendments were agreed to.

Mr. METZENBAUM. I move to reconsider the vote by which the amendments were agreed to.

Mr. GRAVEL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 1692

(Purpose: To declare certain waters to be non-navigable)

Mr. WILLIAMS. Mr. President, I call up my amendment No. 1692.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from New Jersey (Mr. WILLIAMS) proposes an amendment numbered 1692.

Mr. WILLIAMS. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the proper place in the bill insert a new section as follows:

SEC. . That portion of the Delaware River in the Borough of Palmyra, county of Burlington, State of New Jersey, lying within the boundaries described as follows is declared to be not a navigable water within the meaning of the Constitution and laws of the United States:

Beginning at the point of intersection of the centerline of Cinnaminson Avenue (50 feet wide), with the northwesterly right-of-way line of Bank Street, if extended in a southwestwardly direction, and runs thence,

(1) Along the said northwesterly line of Bank Street, and its extension, north 59 degrees 01 minutes 02 seconds east 136.14 feet to a point, corner to lands N/F of the Riverton and Palmyra Water Company, thence,

(2) Along said lands of water company, north 27 degrees 52 minutes 58 seconds west 50.52 feet to a point corner to same, thence,

(3) Still along same, north 60 degrees 49 minutes 02 seconds east 31.82 feet to a point corner to same, thence,

(4) Still along same, and parallel with Cinnaminson Avenue, north 37 degrees 07 minutes 58 seconds west 61.03 feet to a point which is 1.0 foot back from the mean high water line of the Delaware River, thence,

(5) Parallel with and 1.0 foot back of the said mean high water line, north 68 degrees 27 minutes 31 seconds west 25.67 feet to a point, thence,

(6) Still along same, north 63 degrees 50 minutes 14 seconds west 26.05 feet to a point, thence,

(7) Still along same, north 50 degrees 48 minutes 11 seconds west 31.70 feet to a point, thence,

(8) Still along same, north 52 degrees 11 minutes 29 seconds west 39.04 feet to a point, thence,

(9) Still along same, north 44 degrees 44 minutes 39 seconds west 28.67 feet to a point, thence,

(10) Still along same, north 38 degrees 51 minutes 21 seconds west 47.96 feet to a point, thence,

(11) Still along same, north 45 degrees 00 minutes 29 seconds west 45.86 feet to a point, thence,

(12) Still along same, north 36 degrees 47 minutes 39 seconds west 49.94 feet to a point, thence,

(13) Still along same, north 33 degrees 04 minutes 03 seconds west 34.47 feet to a point, thence,

(14) Still along same, north 25 degrees 54 minutes 00 seconds west 36.37 feet to a point, thence,

(15) Still along same, north 26 degrees 16 minutes 06 seconds west 31.69 feet to a point, thence,

(16) Still along same, north 60 degrees 17 minutes 11 seconds west 38.76 feet to a point, thence,

(17) Still along same, north 40 degrees 48 minutes 27 seconds west 30.13 feet to a point, thence,

(18) Still along same, north 45 degrees 02 minutes 23 seconds west 41.87 feet to a point, thence,

(19) Still along same, north 39 degrees 11 minutes 00 seconds west 57.00 feet to a point, thence,

(20) Still along same, north 23 degrees 58 minutes 32 seconds west 25.84 feet to a point, thence,

(21) Still along same, north 31 degrees 35 minutes 29 seconds west 45.75 feet to a point, thence,

(22) Still along same, north 45 degrees 30 minutes 04 seconds west 50.28 feet to a point, thence,

(23) Still along same, north 35 degrees 27 minutes 45 seconds west 23.70 feet to a point, thence,

(24) Still along same south 56 degrees 16 minutes 59 seconds west 14.17 feet to a point, thence,

(25) Still along same, north 66 degrees 16 minutes 59 seconds west 18.31 feet to a point, thence,

(26) Still along same, south 63 degrees 12 minutes 41 seconds west 8.13 feet to a point, thence,

(27) Still along same, south 52 degrees 38 minutes 54 seconds west 34.57 feet to a point, thence,

(28) Still along same, south 18 degrees 07 minutes 04 seconds west 21.83 feet to a point, thence,

(29) Still along same, south 07 degrees 17 minutes 47 seconds west 18.43 feet to a point, thence,

(30) Still along same, south 41 degrees 54 minutes 40 seconds west 19.54 feet to a point, thence,

(31) Still along same, south 68 degrees 19 minutes 43 seconds west 22.00 feet to a point, thence,

(32) Still along same, south 58 degrees 47 minutes 04 seconds west 51.41 feet to a point, thence,

(33) Still along same, south 59 degrees 23 minutes 55 seconds west 38.48 feet to a point, thence,

(34) Still along same, south 79 degrees 24 minutes 06 seconds west 32.41 feet to a point, thence,

(35) Still along same, north 89 degrees 02 minutes 53 seconds west 44.96 feet to a point, thence,

(36) Still along same, north 84 degrees 21 minutes 49 seconds west 86.30 feet to a point, thence,

(37) Still along same, north 89 degrees 40 minutes 23 seconds west 83.26 feet to a point, thence,

(38) Still along same, north 89 degrees 03 minutes 02 seconds west 86.01 feet to a point, thence,

(39) Still along same, south 85 degrees 45 minutes 00 seconds west 59.56 feet to a point, thence,

(40) Still along same, south 83 degrees 04 minutes 19 seconds west 106.16 feet to a point, thence,

(41) Still along same, south 86 degrees 13 minutes 51 seconds west 108.01 feet to a point, thence,

(42) Still along same, north 86 degrees 04 minutes 43 seconds west 75.83 feet to a point, thence,

(43) Still along same, north 83 degrees 25 minutes 08 seconds west 57.99 feet to a point, thence,

(83) Along said line of Cinnaminson Avenue, north 37 degrees 07 minutes 58 seconds west 270.92 feet to a point in the aforementioned line of Bank Street, if extended in a southwestwardly direction, thence,

(84) Along said extended line of Bank Street, north 59 degrees 01 minute 02 seconds east 25.14 feet to the point and place of beginning;

Containing within said bounds 104.791 acres, more or less;

Except, beginning at the southeasterly corner of lands N/F of C. L. Sharp and Marion Hurff Sharp, an exception, as shown on plan of "Survey and Boundary Plan Showing Proposed Streets and Right-of-Way at Palmyra Harbour", dated June 15, 1970, made by Remington and Boyd, Engineers; said beginning point being located the following two courses from the point of intersection of the northwesterly right-of-way line of Maryland Avenue (50 feet wide), with the southwesterly right of way line of Cinnaminson Avenue (50 feet wide), (1) along the southwesterly right-of-way line of Cinnaminson Avenue, north 37 degrees 07 minutes 58 seconds west 263.79 feet to a point corner to a 20-foot-wide easement, as shown on aforesaid survey plan, (2) along said easement, south 52 degrees 52 minutes 02 seconds west 152.44 feet to said beginning point, and runs thence,

(1) Along the southerly line of aforesaid exception, south 60 degrees 47 minutes 14 seconds west 185.72 feet to a point for a corner, thence,

(2) Along the westerly line of said exception north 29 degrees 10 minutes 58 seconds west 260.00 feet to a point for a corner, thence,

(3) Along the northerly line of said exception, north 56 degrees 29 minutes 02 seconds east 186.26 feet to a point for a corner, thence,

(4) Along the easterly line of said exception, south 29 degrees 10 minutes 58 seconds east 273.97 feet to the point and place of beginning.

Containing within said bounds 1.138 acres.

Mr. WILLIAMS. Mr. President, this amendment declares certain waterways to be nonnavigable in the Delaware River, in the community of Palmyra, N.J.

I have discussed this matter with the very able manager of the bill, and I believe this amendment has met all the tests of the committee and the corps.

Mr. GRAVEL. Mr. President, it has met the test of logic and integrity, and it is a sound piece of legislation, and I have no objection.

Mr. DOMENICI. We have no objection.

Mr. GRAVEL. I yield back the remainder of my time.

Mr. WILLIAMS. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

Mr. WILLIAMS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. GRAVEL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. DOMENICI. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DOMENICI. Will the Chair inform me as to the order of business tomorrow, as it pertains to this bill?

ORDER OF PROCEDURE TOMORROW

The PRESIDING OFFICER. The Senate will convene tomorrow at 9:30. After the leaders have been recognized and after two special orders, the Senate will proceed to the consideration of the bill. Then the Senator from West Virginia (Mr. RANDOLPH) will be recognized for the purpose of offering an amendment. After the Senate completes action on that amendment, it will turn to the user fees issue and Locks and Dam 26—amendments on those subjects..

Mr. DOMENICI. At what hour?

The PRESIDING OFFICER. The Senate will convene at 9:30. After the leaders have been recognized and after two special orders and action on one amendment to be offered by the Senator from West Virginia, the Senate will turn to locks and dam 26 and the user fees issue.

Mr. DOMENICI. Amendments to the remainder of the bill would have to be completed today or they would not be in order tomorrow?

The PRESIDING OFFICER. They will be in order tomorrow. The only order is that amendments on locks and dam 26 and user fees will not be in order until tomorrow.

Mr. DOMENICI. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PERCY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRAVEL. Mr. President, did the Senator have an amendment he wished to take up?

UP AMENDMENT NO. 1278

Mr. PERCY. Mr. President, I send to the desk two amendments to H.R. 8309 that would change section 208 of the Flood Control Act of 1954, and I ask unanimous consent that they be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments will be stated.

The assistant legislative clerk read as follows:

The Senator from Illinois (Mr. PERCY) proposes unprinted amendments en bloc numbered 1278.

Mr. PERCY. Mr. President. I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill, insert the following:

Sec. —. Section 208 of the Flood Control Act of 1954 (68 Stat. 1256, 1266) as amended, is hereby amended by striking out "$250,000" and inserting in lieu thereof "$500,000".

At the end of the bill insert the following:

Sec. —. Section 208 of the Flood Control Act of 1954 (68 Stat. 1256, 1266) as amended, is hereby amended by striking out "$5,000,000" and inserting in lieu thereof "$10,000,000", and by striking out "$250,000" and inserting in lieu thereof "$500,000".

Mr. PERCY. Mr. President, section 208 of the Flood Control Act is the permanent authorization for a small snagging and clearing projects undertaken in the authority of the Corps of Engineers.

My amendments would allow the Army Corps of Engineers to proceed on section 208 snagging and clearing projects without specific congressional authority, if it is estimated that the cost of the project is less than $500,000. At present, the corps authority is limited to individual projects costing less than $250,000.

It make sense to me to allow the corps to proceed with somewhat larger projects because, as the manager of the bill recalls, in the past few years we have raised the limitations on other small project authorizations, such as 201 and 205 small flood control projects, 103 beach erosion projects, 107 navigation projects and others to account for inflation. The section 208 project levels, however, were last increased in 1974—and then only to $250,000.

Mr. President, I do not believe Congress should spend its time considering and specifically authorizing the corps to proceed with a $300,000 or $400,000 section 208 snagging and clearing project

every time a creek becomes clogged somewhere in this country.

Mr. President, I must say that what brought this matter to my attention is a problem that exists in Illinois. Specifically, a 7-mile stretch of Salt Creek that runs through Addison township in Dupage County, Ill. This creek is full of snags due to fallen trees, brush, et cetera. The rubbish in this creek causes occasional flooding in Addison township and needless to say presents a hazard to the citizens living in the community.

Upon checking into a solution to the Salt Creek flooding problem and after checking with the Corps of Engineers officials, it was determined that the minor snagging and clearing project would cost approximately $300,000 and therefore the corps could not proceed on this matter because it exceeded the $250,000 limit set under section 208 of the Flood Control Act of 1954. My amendment would remedy this situation by providing authority to the corps to proceed with projects such as the Salt Creek project.

I coordinated my efforts with those of my able House colleague, Congressman HENRY HYDE, who will support a line item in the House appropriations bill.

I have intentionally drafted by amendment in broader terms than the Salt Creek problem, in hopes that the managers of the bill would think it sensible and logical, as I do, to provide the corps with this modest latitude.

I hope that the distinguished floor manager of the bill (Mr. GRAVEL) and the Senator from New Mexico (Mr. DOMENICI) would accept my minor amendment to the legislation presently under consideration.

I am very happy to add, of course, my distinguished colleague, Senator STEVENSON, as a cosponsor if he has an interest in cosponsoring, and I ask unanimous consent that Senator STEVENSON be added as a cosponsor of the amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRAVEL. Mr. President, I must say from our side we are prepared to accept the amendments, and I yield to the minority.

Mr. McCLURE. On behalf of the minority we are prepared to accept the amendment.

Mr. GRAVEL. Mr. President, I yield back the remainder of our time.

Mr. McCLURE. I yield back the remainder of our time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Illinois.

The amendment was agreed to.

Mr. PERCY. Mr. President, I ask unanimous consent that the two amendments that have been adopted be placed at the end of the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The PRESIDING OFFICER (Mr. ALLEN). Who yields time?

Mr. STEVENSON addressed the Chair.

The PRESIDING OFFICER. The Senator from Illinois.

AMENDMENT NO. 1815

(Purpose: To deauthorize the Helm Reservoir, Skillet Fork, Illinois)

Mr. STEVENSON. Mr. President, I call up amendment No. 1815 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Illinois (Mr. STEVENSON) proposes amendment numbered 1815.

Mr. STEVENSON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 5, insert the following and number accordingly:

SEC. . (a) The authorization for the Helm Reservoir project, for flood control and other purposes contained in section 201 of the Flood Control Act of 1968 (82 Stat. 739) as part of the Wabash River Basin Comprehensive Plan, is terminated upon enactment of this Act.

Mr. STEVENSON. Mr. President, this is an amendment to deauthorize a project in illinois.

This amendment is cosponsored by Senator PERCY. It is noncontroversial and I understand it has the support of the committee.

This amendment would simply deauthorize the Helm Reservoir Dam project as part of the Comprehensive Plan for the Wabash River Basin.

The Helm Reservoir has been on the corps' "inactive" list for some time now. The project is not supported by the State, nor by Senator PERCY or myself.

I have discussed this amendment with the distinguished managers of the bill. I know of no opposition to the amendment and hope they will be able to accept it.

I urge adoption of this amendment.

Mr. GRAVEL. We will be happy to accept it.

Mr. DOMENICI. We have no objection.

Mr. GRAVEL. Mr. President, I yield back the remainder of my time.

Mr. STEVENSON. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

AMENDMENT NO. 1816

(Purpose: To authorize the Secretary of the Army acting through the Chief of Engineers to amend the contract between the State of Illinois and the United States for use of water supply storage space at the Rend Lake Dam and Lake, Illinois)

Mr. STEVENSON. Mr. President, I call up amendment No. 1816 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Illinois (Mr. STEVENSON) proposes amendment numbered 1816.

Mr. STEVENSON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 5, insert the following and number accordingly:

SEC. . (a) The Secretary of the Army, acting through the Chief of Engineers, is authorized to amend the contract between the State of Illinois and the United States for use of storage space for water supply in the Rend Lake Dam and Lake on the Big Muddy River in Illinois to relieve the State of Illinois of the requirement to make annual payments for that portion of the maintenance and operation costs applicable to future use water supply storage as is consistent with the intent and language of the Water Supply Act of 1958 (Public Law 85-500), until such time and in such proportion as the storage is used for water supply purposes.

Mr. STEVENSON. Mr. President, this is another technical amendment.

The purpose of this amendment is to correct an inequity in an existing water supply contract between the State of Illinois and the U.S. Government. That contract, entered into in 1965, did not provide the State of Illinois the rights it was entitled to under the "future water supply" provision of the Water Supply Act of 1958. The net result is that the State is paying $200,000 per year to cover the costs of water supply storage space which is not now needed. Such payment is not required on other projects until the water supply storage is used. The Department of the Army recognizes that this inequity exists but their General Counsel ruled that there is no authority available to renegotiate the contract. This amendment would authorize renegotiation in accordance with existing policy.

I have discussed this with the distinguished managers of the bill, and I know of no opposition, and I am hopeful they are in a position to accept it.

Mr. GRAVEL. Mr. President, I have no problem with this. I yield to my colleague.

Mr. DOMENICI. Mr. President, this is a bad precedent, but only a little precedent so we have no objection, it is only small.

Mr. GRAVEL. I hope we only commit little bad precedents.

Mr. DOMENICI. It is only small.

The PRESIDING OFFICER. Is all time yielded back?

Mr. STEVENSON. I yield back the remainder of my time.

Mr. GRAVEL. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

AMENDMENT NO. 1817

(Purpose: To clarify technical language with respect to the authorization providing for the annual cleanup of the North Branch of the Chicago River)

Mr. STEVENSON. Mr. President, I call up my amendment No. 1817 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Illinois (Mr. STEVENSON) proposes amendment No. 1817.

Mr. STEVENSON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 5, insert the following and number accordingly:

SEC. . (a) The second sentence of subsection (b) of section 116 of the Rivers and Harbors Act of 1970 (84 Stat. 1822) as amended, is further amended to read as follows: "The Secretary of the Army, acting through the Chief of Engineers, shall, before beginning any operation to maintain the channel authorized by this section, enter into a separate agreement with the appropriate non-Federal interests which is applicable only to that operation and which requires such non-Federal interests to pay 25 per centum of the cost of such maintenance operation.".

Mr. STEVENSON. Mr. President, the amendment I propose seeks to clarify technical language with respect to a 1974 authorization providing for the annual clean up of the north branch of the Chicago River.

Section 7 of the Water Resources Development Act of 1974 authorizes the Corps of Engineers to help clean up the north branch of the Chicago River on an annual basis. The legislation also contains a provision which requires the local interests to pay 25 percent of the costs of the project. The corps has interpreted this provision to mean that the local sponsorship must be agreed to in perpetuity. However, since it is possible that the local sponsor could change from year to year, it is necessary to clarify the language in the law. The amendment I offer will allow the local obligation to be paid on an annual basis instead of in perpetuity. The rate of the local obligation remains unchanged—the local sponsor will still pay 25 percent of the cost of maintaining the channel free of trees, roots, debris, and other objects.

The Metropolitan Sanitary District of Chicago has already agreed to act as the project's local sponsor, and the Corps of Engineers is ready to begin work. However, nothing can be done until this amendment is adopted clarifying the obligations of the local sponsor.

I have discussed it with the able managers of the bill, and I am hopeful that they will be able to accept it.

I urge its adoption.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. GRAVEL. Mr. President, I have no objection to this amendment, and I yield to the minority floor manager.

The PRESIDING OFFICER. Is all time yielded back?

Mr. GRAVEL. I yield back my time.

The PRESIDING OFFICER. All the time has been yielded back.

Mr. STEVENSON. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Illinois.

The amendment was agreed to.

UP AMENDMENT NO. 1279

(Purpose: To amend the authorization for the Chicagoland underflow plan project)

Mr. STEVENSON. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will please report.

The assistant legislative clerk proceeded to read the amendment.

Mr. STEVENSON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 5, insert the following and number accordingly:

SEC. . (a) Section 108 of the Water Resources Development Act of 1976 (Public Law 94-587) is hereby amended to delete all the words following "$12,000,000." in line 6 and substitute in lieu thereof: "Such Phase I design memorandum stage of advanced engineering and design shall include a comprehensive analysis of the flood damage reduction features and of alternatives thereto."

Mr. STEVENSON. Mr. President, this is a substitute for my amendment numbered 1818. It is the same amendment, but with a technical correction in the earlier amendment which was discussed with the distinguished managers of the bill.

This amendment would amend the authorization for the phase I advanced engineering and design work of the Chicagoland underflow plan contained in section 108 of the Water Resources Development Act of 1976.

The amendment would first, remove the condition that phase I work cannot proceed until such time as the Secretary of the Army approved the project and notified the Congress and; second, broaden the authorization to direct the Corps of Engineers to study other perhaps less costly and more effective alternatives to the Chicagoland underflow plan.

The authorization—section 108 of Public Law 94-587—was limited and conditional. It stated that the authorization to begin the phase I work would take effect upon submittal to the Secretary of the Army by the Chief of Engineers and notification to Congress of the approval of the Chief of Engineers. This condition was inserted in the legislation by the Public Works Committee as a means of expediting the project. When TARP was authorized for phase I the Congress was only passing an omnibus water resources bill once every 2 years. Inevitably there were a number of good projects that missed being included in the bill by only a few months. Rather than make these projects wait a full 2 years until the next omnibus bill the Public Works Committee adopted the policy of conditional authorization which would allow the corps to move forward as soon as it finished its report and transmitted it to Congress.

The chief's report was never transmitted to the Congress. The Office of Management and Budget has refused to allow that report to be transmitted. I can understand OMB's concern. TARP is an expensive undertaking. It is potentially the largest public works project in history. It could also be the most effective. The lowest cost estimate is $2.5 billion, and the General Accounting Office estimates it may cost an additional $5 billion. Obviously the TARP project—if built—will mean a heavy investment of public funds. Any decision to make that investment cannot be made lightly.

But neither the Congress nor OMB need make a final decision on TARP today. The 1976 authorization directed the Corps of Engineers to study TARP for potential Federal flood control funding. Part two of the amendment I submit mandates that the corps study the feasibility of alternatives. The phase I authorization assumes the study of these alternatives, but given a project of this magnitude, and OMB's reservations, I believe the instructions should be explicit. My amendment could make the TARP authorization more explicit.

The amendment in no way commits the Federal Government to assume the financing of TARP—or any alternative for that matter. All this amendment does is give all options a fair hearing. I would expect the corps to study all proposals thoroughly and then report back to the Congress on its findings along with a recommendation as to whether the Federal Government should participate in flood relief in the Chicago area—and if so, to what extent. This amendment will accomplish a study of TARP and alternatives. I urge its adoption.

I am hopeful that the able managers of the bill will accept this amendment.

Mr. GRAVEL. I have no objection to this.

Mr. DOMENICI. We have no objection.

Mr. GRAVEL. I yield back the remainder of my time.

Mr. STEVENSON. I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back, and the question is on agreeing to the amendment of the Senator from Illinois.

The amendment was agreed to.

Mr. McCLURE. addressed the chair.

The PRESIDING OFFICER. The Senator from Illinois has been recognized.

Mr. STEVENSON. Mr. President, the Senator from Illinois does not desire recognition.

AMENDMENT NO. 1733

Mr. McCLURE. Mr. President, I call up my amendment 1733 and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will please state the amendment.

The assistant legislative clerk proceeded to read the amendment.

Mr. McCLURE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 5, insert the following, and number accordingly:

SEC. . (a) The project for Lucky Peak Lake, Idaho, authorized by the Flood Control Act of 1946, as modified by the Water Resources Development Act of 1976, is further modified to provide for an increase in the

diameter of the additional dam outlet authorized in such 1976 modification to twenty-three feet and to direct the Secretary of the Army to (1) authorize any entity having the necessary license from the Federal Energy Regulatory Commission to construct such outlet in accordance with the said entity's plans, as approved by the Secretary of the Army, and to use such outlet for the generation of electricity, (2) provide that all property rights in such outlet, subject to the provisions of this section, shall be conveyed to and remain with the United States, and (3) reimburse such entity for an amount equal to the estimated cost, as determined by the Secretary of the Army, of the original outlet as authorized by the Water Resource Development Act of 1976. Such cost shall be determined as of the time of the construction of the twenty-three foot outlet.

(b) There is authorized to be appropriated such amount as is necessary to carry out the provisions of this section.

Mr. McCLURE. Mr. President, it is my understanding that the managers of the bill, both the majority and the minority, are prepared to accept this amendment which deals with the Lucky Peak project in the State of Idaho.

Mr. President, the amendment I am offering today, No. 1173, introduced by myself and my colleague from Idaho, will provide an additional and enlarged outlet tunnel at the Corps of Engineers Lucky Peak Dam project in Idaho. The amendment also allows any entity having the necessary FERC license to construct and increase the size of the already authorized additional outlet. This increase in cost will not be borne by the taxpayer.

The Lucky Peak project, authorized in 1946, has been operated for flood control and incidental irrigation benefits. The dam has one 23-foot intake tunnel with penstock but economic conditions never justified adding a power unit until this time.

Recently, blisters have been discovered in the existing tunnel. The corps has made the necessary repairs in the outlet but occasional shutdowns are needed to inspect and repair the outlet. As a result of these shutdowns, water quality below the dam has suffered and an amendment was passed in 1976 to direct the corps to build a second outlet, 7 feet in diameter, for water quality control.

My amendment merely takes advantage of the need for this second outlet and allows an entity to build the second outlet for the Government. The Boise Project Board of Control, the entity contracted by the Bureau of Reclamation to receive the irrigation benefits from Lucky Peak, wants to place a 75 MW power facility on Lucky Peak. Their engineering design is to place a 23 foot outlet as the second outlet to be utilized for the conveyance of water to the turbines.

This increase in tunnel size not only provides an adequate conveyance tunnel for power purposes but assures the necessary water quality control and guarantees a continual flow of water to irrigators thereby limiting the expense of millions of dollars of crop damage should the existing tunnel fail. The additional cost increase of placing a larger second outlet would be assumed by the Boise Project Board of Control.

The sharply rising costs of power and energy from alternative sources has justified the economic feasibility of the existing Lucky Peak Dam site as a power source. The Corps of Engineers has completed an EIS on the proposal to place a 75 MW plant at the dam. No change is proposed in the operation of the existing project so that the proposed power development will have no significant adverse effect on the overall system nor on the environment.

This amendment is an example of how we can be utilizing our existing water projects for alternate sources of clean, environmentally sound hydropower. I have been pushing this kind of energy alternative for years and I am pleased that this administration is recognizing the feasibility of utilizing existing projects to help meet our growing energy demands. I urge your support of this practical and worthwhile amendment.

Mr. DOMENICI. Mr. President, we have no objection to the amendment.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. GRAVEL. Mr. President, I have no objection to this amendment.

The PRESIDING OFFICER. Is all time yielded back?

Mr. GRAVEL. I yield back all time.

Mr. McCLURE. I yield back my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Idaho.

The amendment was agreed to.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. GRAVEL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 1734

Mr. McCLURE. Mr. President, I call up my amendment No. 1734 and ask the clerk to report.

The PRESIDING OFFICER. The clerk will please state the amendment.

The assistant legislative clerk proceeded to read the amendment.

Mr. McCLURE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 5, insert the following and number accordingly:

SEC. . The authorization for the Heise-Roberts local protection project, Idaho, contained in section 10, Public Law 534, Seventy-eighth Congress, and section 204, Public Law 516, Eighty-first Congress, is hereby modified to provide that the operation and maintenance of the project shall be the responsibility of the Secretary of the Army, acting through the Chief of Engineers: *Provided*, That local interests shall pay the first $25,000 in cash or materials of any such costs expended in any one year.

Mr. McCLURE. Mr. President, my amendment and that of my distinguished colleague from Idaho, to H.R. 8309, No. 1734, is designed to provide continued Corps of Engineers assistance to the Heise-Roberts flood control project in Idaho by giving the corps authority to repair the existing flood control works as necessary. The corps has historically utilized Public Law 99 funds to riprap existing levees and this would merely give them the authority to continue this practice with general O. & M. funds.

The project is unique. The Snake River in this area is braided, or highly meandering, and when the project was authorized in 1944 to provide bank protection work, it was decided the costs would be too excessive to riprap and construct continuous levees up and down the river. Structures were only built where erosion occurred at the time and because of the constant eroding nature of the stream, continual repairs and placement of levees is necessary. The corps and the local flood control district have worked together in annually spotting and repairing eroded levees. Federal costs have been averaging around $122,000 per year with local interests providing around $20,000 in materials. This beneficial program has been ongoing for almost 35 years.

Recently, the corps indicated it was not wise to continue providing assistance under the emergency Public Law 99 program and that other assistance should be found. My amendment simply transfers the operation and maintenance of the project to the Corps of Engineers with a proviso directing the local sponsors to pay $25,000 in cash or materials each year repairs are needed.

Because of the unique nature of the Snake River in this area and fluctuations from a Federal dam adding to this erosion problem, and especially the history of this project, the amendment introduced does not establish a precedent for other projects. It is merely a continuation of an established practice between the corps and a local flood control district in preventing widespread flooding damage to residents of southeastern Idaho. I might note that I have requested around $20,000 for the continued general investigation study on the Heise-Roberts project by the corps. This study, if funded by the Congress this year, would determine the adequacy of the existing levees and identify other flood related problems. This may very well determine that a different approach is needed in dealing with the continual erosion problems on the upper Snake, but until that study is completed and recommendations made, the amendment introduced today is critical so continued flood control protection is available to southeastern Idaho residents.

Mr. President, like the last one, I understand the managers of the bill are agreeable to this amendment. I believe the managers have indicated they will accept the amendment.

Mr. GRAVEL. I have no objection to the amendment, and would yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment of the Senator from Idaho.

The amendment was agreed to.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. GRAVEL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 1280

(Purpose: Modification of Project for Cheatam Lock and Dam on the Cumberland River to allow the Chief of Engineers to acquire land for the purpose of constructing recreational facilities)

Mr. SASSER. Mr. President, on behalf of Senator BAKER and myself, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will please state the amendment.

The assistant legislative clerk proceeded to read the amendment.

Mr. SASSER. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the proper place in the bill insert the following:

The Project for Cheatam Lock and Dam on the Cumberland River in Tennessee, as authorized by the River and Harbor Act of July 24, 1946 (60 Stat. 634, Pub. L. 79-525), is hereby modified to authorize the Secretary of the Army, acting through the Chief of Engineers and in cooperation with the State of Tennessee and the Metropolitan Government of Nashville-Davidson County, Tennessee, to acquire land for the purpose of constructing recreational facilities in accordance with the requirements of Section 4 of the Flood Control Act of 1944, as amended (15 U.S.C. 460d), on lands adjacent to the project, and to permit the State of Tennessee and the Metropolitan Government of Nashville-Davidson County to include the value of such lands as part of their contribution toward the development of such facilities.

Mr. SASSER. Mr. President, this amendment would allow the Army Corps of Engineers to acquire land and develop a recreational facility, and specifically a boat ramp, in Nashville, Tenn.

The development was one of those stopped by a ruling of the chief counsel of the corps. This ruling held that the Corps of Engineers had no statutory authority to acquire land to develop recreational facilities on completed projects where recreation was not a project purpose. This amendment would allow the acquisition of land for this project, which is, of course, a shared cost of development.

Now, it is my understanding, Mr. President, that the distinguished managers of this bill will accept this amendment, which simply allows the completion of a project already planned.

Mr. GRAVEL. Yes. Mr. President, we have no objection on the majority side to this particular amendment, and I yield to my colleague on the minority side.

Mr. DOMENICI. We have no objection.

Mr. GRAVEL. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. STEVENSON). Is all time yielded back?

Mr. SASSER. I appreciate the cooperation of the distinguished managers.

The PRESIDING OFFICER. All time is yielded back. The question is on agreeing to the amendment of the Senator from Tennessee.

The amendment was agreed to.

UP AMENDMENT NO. 1281

Mr. STENNIS. Mr. President, I have an amendment that I send to the desk and I ask that it be called up.

The PRESIDING OFFICER. The clerk will report the amendment.

The assistant legislative clerk proceeded to read the amendment.

Mr. STENNIS. Mr. President, if I am in order, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

The existing Federal navigation project for Gulfport Harbor, Mississippi, authorized by the River and Harbor Act approved 3 July 1958, and printed in Senate Document 123, 84th Congress, 2d Session, and previous acts and documents, is hereby modified by the authorization of construction of the plan presented by the Chief of Engineers in his report dated 16 January 1978, at an estimated Federal cost of $21,184,000, subject to changes deemed appropriate by the Chief of Engineers, and including procurement of any dredged material transport equipment deemed appropriate.

Mr. STENNIS. Mr. President, this is an amendment which is a modification of a provision that is already in the bill and has been approved by the committee. It is the Gulfport Harbor project. It states on its face what it is for.

I would be glad to yield to the floor leaders on the bill.

Mr. GRAVEL. Mr. President, we have had a chance to examine it and have had a chance to meet with the Corps very briefly on it, and we have no objection.

I yield to my colleague.

Mr. DOMENICI. I have no objection.

Mr. STENNIS. Mr. President, I am certainly grateful to the floor leaders for their consideration of this matter. It is an emergency and great good will come from what they are doing. This amendment is being offered by myself and in the name of Congressman LOTT, of the district affected, who was very instrumental in working on this project.

I just call attention to his interest and his support and activity.

Mr. GRAVEL. We thank the distinguished Senator and we yield back the remainder of our time.

Mr. DOMENICI. We are delighted to have the Congressman present with the Senator on the floor.

Mr. STENNIS. I appreciate that.

The PRESIDING OFFICER. All time is yielded back on the amendment? The question is on agreeing to the amendment of the Senator from Mississippi.

The amendment was agreed to.

UP AMENDMENT NO. 1282

Mr. GRAVEL. Mr. President, I call up an unprinted amendment of Senator INOUYE.

The PRESIDING OFFICER. The clerk will report the amendment.

The assistant legislative clerk proceeded to read the amendment.

Mr. GRAVEL. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 6, insert the following and number accordingly:

SEC. . (a) The project for the Barbers Point Harbor, Hawaii, authorized by the River and Harbor Act of 1965 (79 Stat. 1092) is hereby modified to require a non-Federal cash contribution of 4.4 percent of actual Federal construction costs, to be paid in estimated annual installations as construction proceeds, the final costs to be adjusted after actual costs have been determined. An additional non-Federal cash contribution shall be paid each year, equal to fifty percent of the excess, if any, of the actual net revenue from the non-Federal sale of coral dredge material for that year over the net estimated revenue from the sale of such project material for that year as determined in the computation of the 4.4 percent cash contribution requirement. The procedure and the unit values used for determining excess net revenues shall be approved by the Secretary of the Army.

(b) Agreement to make contributions as provided for in subsection (a) of this section shall be entered into between the non-Federal interests and the Secretary of the Army prior to initiation of construction.

Mr. GRAVEL. Mr. President, the majority has no problems with this amendment.

Mr. DOMENICI. We have no objection.

Mr. GRAVEL. I ask unanimous consent to have printed in the RECORD the statement of the Senator from Hawaii (Mr. INOUYE) and the letter from the Department of the Army.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR INOUYE

For well over a year now, the Federal government and the local interests, the State of Hawaii, and the special and civilian staff of the Department of the Army have been arguing over the cost-sharing requirement for the Barbers Point Harbor project. This amendment is the product of that period of disagreement and controversy and unsuccessful attempts to come to an agreement on an equitable level of cost-sharing for a project which has been in the planning stages for about fifteen years. Despite visits to Washington, D.C. by State transportation officials and numerous meetings with representatives of the Corps of Engineers, this matter has remained unresolved, in something of a stalemate with valid arguments on each side of the issue because of the unknown, future conditions that will affect the sale of the coral material to be dredged in constructing the Barbers Point Harbor.

By way of background, I would like to point out that the resolution of this matter has been further complicated because of the interest of a third party, another local interest, Campbell Estate, whose involvement is a result of the arrangement whereby the State of Hawaii acquired the project land. Land is an extremely expensive and scarce commodity in my state. The price of buying the land outright for the harbor was too high. The State was too hard-pressed shouldering other responsibilities to set aside funds for such a large capital expense. So, the State agreed to trade most of its interest in the coral spoil to be dredged in building the harbor to Campbell Estate, a private trust, in exchange for the land for the Barbers Point Harbor.

At first, it was thought that the coral would be used for fill in construction of the reef runway at the Honolulu International Airport. This use of the coral would not

have presented such a problem because its value as fill resulted in the calculation of a local benefit in the Corps' Phase I General Design Memorandum which was not much more than the value assigned to the authorized level of cost-sharing for the project. However, a problem did arise for several reasons: the project was delayed and the reef runway was completed; new, renumerative uses for the coral spoil appeared possible; and the net volume of the coral expected to be dredged increased in line with plans to enlarge the harbor basin to accommodate present and future container ships and tankers. I might also add that this problem was compounded by the fact that the Corps had never before attempted to calculate a cost-sharing requirement on the basis of such a dredged spoil as a local benefit.

In an effort to break the deadlock between the Department of the Army and the State of Hawaii, I met with the Secretary of the Army, Mr. Clifford Alexander, Jr., on April 21, 1978. This meeting resulted in a new Army proposal for a local cost-sharing requirement which was transmitted to me by the Deputy Under Secretary of the Army, Mr. Michael Blumenfeld, on April 26, 1978. I respectfully request that a copy of Deputy Under Secretary Blumenfeld's letter on this matter be printed at the conclusion of my statement.

The Army proposes a cost-sharing requirement for the Barbers Point Harbor at 4.4 percent of the actual Federal construction cost of the project, versus the authorized level of 2.1 percent, and an additional contribution of 50 percent of the net excess, if any, above the State's and the Corps' projections of the revenue to be derived from the sale of the dredged coral each year, until all the coral is sold. To put it simply, the State of Hawaii will agree to pay more than twice the authorized level. If the calculations of the State and the Corps are correct, then the State will pay no more. However, if there should be some windfall profit achieved by sales of coral over and above current estimates of the proceeds, then the Federal government will share equally in such a profit. The 50–50 sharing of any net excess profits is considered appropriate by the Department of the Army in order to provide an incentive to the local interests to sell the coral at a more rapid rate if market conditions make that possible.

I urge the Senate to accept this amendment, not only to settle this matter, but to insure also that the Barbers Point Harbor may proceed to construction when funds are made available.

DEPARTMENT OF THE ARMY,
OFFICE OF THE UNDER SECRETARY,
Washington, D.C., April 26, 1978.

HON. DANIEL K. INOUYE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR INOUYE: Our meeting last week was productive in achieving equitable cost-sharing for the Barbers Point Harbor project. All parties agree that some modification of the authorized cost-sharing is required because of the increased value of the excavated coral for use by the construction industry. Establishing the new cash contribution involves assessing both elements of risk and the potential for windfall benefits for the State and local interests. We have agreed that the best course of action is to require an initial cash contribution based on a conservative estimate of coral sales, but provide for additional contributions if there are higher profits than anticipated.

Confirming our telephone conversation of this morning, the attached draft legislation was prepared for your use as requested. I believe this modification of the authorized project would be consistent with the outcome of our discussion in your office. The initial cash contribution would be increased from the authorized 2.1 percent to 4.4 percent of the actual Federal construction cost, and an additional provision would require an annual cash contribution if coral sales produce higher net revenues than are now anticipated by both the Corps of Engineers and the State. The additional cash contribution that may be required each year would be a function of the current condition of the construction materials market, current values for land rent, processing plant operations and, ultimately, the actual marketing period. The annual determination of the requirement for a cash contribution will, of course, require constant monitoring and an annual audit of the processor's operations.

By requiring local interests to pay to the Federal Government only 50 percent of the excess net revenues, we have built in an incentive for efficient management of the coral operation, more rapid marketing of the material and, consequently, earlier termination of the Federal interest in, and responsibility for monitoring of, the marketing operation. This, we believe, is in the best interests of all parties.

The draft legislation I am providing has not, of course, received the full review required for formal support by the Administration. I am furnishing this legislative language as a drafting service only. It does not represent an official position of the Department of the Army on legislation the Committee might subsequently adopt. Under established policy, departmental views on proposed legislation are presented in response to a request from the Committee to which the legislation has been referred for consideration, after clearance by the Office of Management and Budget.

However, I believe the project authorization must be modified to qualify it for consideration as a new construction start. Such consideration is now underway by the Department of the Army. The change requested by the attached legislative language would, in my view, provide a satisfactory and equitable cost sharing for the special benefits which will accrue from the sale of coral produced by the project, and I have asked the Corps to include it in any recommendation they may make for a New Construction Start on Barbers Point Harbor.

It was a pleasure meeting you, and I hope that we have been helpful to you in resolving this important matter.

Sincerely,

MICHAEL BLUMENFELD
Deputy Under Secretary.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Hawaii.

Without objection, the amendment is agreed to.

AMENDMENT NO. 1832

(Purpose: To establish a commission to assess the technical, economic, and environmental feasibility of constructing a sea-level canal)

Mr. GRAVEL. Mr. President, I call up amendment No. 1832.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. GRAVEL), for himself and Mr. MAGNUSON, proposes an amendment numbered 1832:

At the end of the bill add the following new section:

Mr. GRAVEL. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill add the following new section:

SEC. . (a)(1) There is hereby established a Commission to be known as the International Sea-Level Canal Study Commission, hereinafter referred to as the "Commission".

(2) The Commission shall conduct such studies and investigations as may be necessary, including onsite surveys, to update the report of the Atlantic-Pacific Interoceanic Canal Study Commission (submitted pursuant to Public Law 88–609) and to prepare an environmental impact statement in accordance with section 102 of the National Environmental Policy Act. The Commission shall, not later than three years from the date of enactment of this section, submit to the President and the Congress a report on its findings and recommendations. The Commission shall cease to exist six months after submission of such report. All records and papers of the Commission shall thereupon be delivered to the Administrator of General Services for deposit in the Archives of the United States.

(b) Studies and investigations undertaken by the Commission shall include, but not be limited to—

(A) an inventory and assessment of flora, Fauna, and ecosystems of the Isthmus of Panama, including, but not limited to—

(i) potential migration of marine organisms through a sea-level canal and the potential ecological effects of any such migration;

(ii) natural or manmade barriers that might mitigate the effects of any such migration; and

(iii) other potential environmental effects of a sea-level canal;

(B) an analysis of the best techniques and equipment presently available or which could be developed to excavate a sea-level canal;

(C) the preparation of alternative designs for financing the construction of a sea-level canal; and

(D) an assessment of the economic feasiby the Commission shall include, but not limited to—

(i) a study of the obsolescence of the Panama Canal;

(ii) an analysis of a sea-level canal in relation to alternative transportation modes;

(iii) an evaluation of the potential contribution of a sea-level canal to alleviate the problem of world energy shortages; and

(iv) an assessment of the impact of a sea-level canal on world commodity movements and world port development.

(c) Following receipt by the President and the Congress of the report by the Commission pursuant to subsection (a), the Council on Environmental Quality shall afford interested persons an opportunity to present oral and written data, views, and arguments respecting the environmental impact statement submitted by the Commission pursuant to subsection (a). Not later than sixty days following the receipt by the President and the Congress of such reports by the Commission, the Council on Environmental Quality shall submit to the President and the Congress a report, which shall be contemporaneously made available to the public, summarizing any data, views, and arguments received and setting forth the Council's view concerning the legal and factual sufficiency of such environmental impact as the Council considers to be relevant.

(d) The President shall, not later than thirty days following the receipt by him of the report of the Council on Environmental Quality pursuant to subsection (c), transmit his finding and recommendation to the Congress.

(e) The Commission shall be comprised of six members as follows:

(A) one member appointed by the President of the Senate;

(B) one member appointed by the Speaker of the House of Representatives;

(C) one member appointed by the President; and

(D) three members appointed by the President upon recommendation for appointment by the Republic of Panama.

(f) The Chairman of the Commission shall be elected by the Commission from among its members.

(g)(1) The Commission or, on authorization of the Commission, any committee of two or more members may, for the purpose of carrying out the provisions of this section, hold such hearings and sit and act at such times and places as the Commission or such authorized committee may deem advisable.

(2) The Commission is authorized to secure from any department, agency, or individual instrumentality of the executive branch of the Government any information it deems necessary to carry out its functions under this section and each department, agency, and instrumentality is authorized and directed to furnish such information to the Commission upon request made by the Chairman.

(h)(1) Members of the Commission who are employed by the Federal Government, including Members of Congress, shall serve without compensation in addition to that received for their services as employees of the Federal Government; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(2) Members of the Commission, other than employees of the Federal Government, who are nationals of the United States, shall each receive compensation at a rate not in excess of the maximum rate of pay for GS-18, as provided in the General Schedule under section 5332 of title 5, United States Code, and shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(3) Members of the Commission who are nationals of the Republic of Panama shall be compensated as determined by the Republic of Panama; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(i)(1) The Commission is authorized to appoint and fix the compensation of a staff director, and such additional personnel as may be necessary to enable it to carry out its functions. The Director and personnel may be appointed without regard to the provisions of title 5, United States Code, covering appointments in the competitive service, and may be paid without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates. Any Federal employees subject to the civil service laws and regulations who may be employed by the Commission shall retain civil service status without interruption or loss of status or privilege. In no event shall any employee other than the staff director receive as compensation an amount in excess of the maximum rate for GS-18 of the General Schedule under section 5332 of title 5, United States Code. In addition, the Commission is authorized to obtain the services of experts and consultants in accordance with section 3109 of title 5, United States Code, but at rates not to exceed the maximum rate of pay for grade GS-18, as provided in the General Schedule under section 5332 of title 5, United States Code.

(2) The staff director shall be compensated at a level 2 of the Executive Schedule in subchapter II of chapter 53 of title 5, United States Code.

(j) The Commission is authorized to enter into contracts or agreements for studies and surveys with public and private organizations and, if necessary, to transfer funds to Federal agencies from sums appropriated pursuant to this section to carry out such of its duties as the Commission determines can best be carried out in that manner.

(k) Any vacancy which may occur on the Commission shall not affect its powers or functions but shall be filled in the same manner in which the original appointment was made.

(l) There are hereby authorized to be appropriated not to exceed $8,000,000 to carry out the provisions of this section. Funds appropriated under this section shall be available to the Commission until expended.

Mr. GRAVEL. Mr. President, what this is is an amendment to study the possibility of constructing a sea-level canal. In the course of the debate on the treaties, on at least two and possibly three occasions I went through the entire presentation on the obsolescence of the present canal. This amendment would provide for going forward with language that we would set up a study. It would request $8 million. What would be done would be that we would study and update the existing study that was done to ascertain the economics of the canal today, to ascertain the technology of a new canal, and also to determine the environmental questions surrounding a new canal. It would also reevaluate the work that was done by the Interoceanic Study Commission from 1964 to 1970, to reaffirm that the location they came up with is a proper location.

I understand there is a request that there be a vote on this amendment. I yield to my colleague from New Mexico for his comments.

Mr. DOMENICI. Mr. President, I assume that there are a number of Senators who would be interested in reviewing this proposal for a $8 million study for a sea-level canal across the Isthmus of Panama. I am not prepared tonight, at this late hour to debate the issue. However, I will ask for the yeas and nays on it tomorrow. I do not wish to agree to a time certain for a vote on it at this time. We have told Senators there would be none tonight, and I would rather wait and see how tomorrow evolves, at which time I am sure the Senator from Alaska and I can arrive at a time certain for a vote.

Mr. GRAVEL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GRAVEL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRAVEL. Mr. President, so that there will be no Member of the Senate who has been placed on notice, even though we have a printed amendment and I know of no objection to it, because of the recent controversy involved over the treaty, I am sure everyone would want to be totally aware of what this amendment does. So I ask unanimous consent that this amendment be the pending business at 12 o'clock noon tomorrow, and that we proceed under the time agreement for 70 minutes, and if there is a desire to vote, that we then vote up or down on the amendment.

Mr. DOMENICI. Mr. President, reserving the right to object, are we saying this will be the pending question at 12?

Mr. GRAVEL. At 12 noon.

Mr. DOMENICI. There are 70 minutes on amendments. If we use that much, then we will vote 70 minutes thereafter, in the event a vote is needed?

Mr. GRAVEL. Yes. I believe we could vote almost immediately. There is no need to debate the matter extensively; the subject has been covered several times on the floor, but I think, in order to protect some Members, if we are ready for a vote with no debate, we would still probably hold off until 1 o'clock.

Mr. DOMENICI. The amendment is a matter of record already, is it not?

Mr. GRAVEL. Yes, it is a printed amendment, cosponsored by——

Mr. DOMENICI. And the agreement does not preclude any kind of motions to table amendments to the amendment, or whatever procedures are available are not precluded by the unanimous-consent order we just agreed upon; is that correct?

Mr. GRAVEL. Not at all.

The PRESIDING OFFICER. That is the understanding of the Chair.

Mr. GRAVEL. Amendments to amendments have what time limit?

The PRESIDING OFFICER. One hour.

Mr. DOMENICI. Fine.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Alaska?

Mr. DOMENICI. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRAVEL. I thank my colleague.

Mr. President, I think we have done a day's work today, and that is the understatement of the day.

Mr. DOMENICI. What time do we come in tomorrow?

Mr. GRAVEL. We will be coming in at 9:30. We will now recess until 9:30, but, just for the information of the Senate, after one Member has spoken here briefly, I shall be recessing the Senate until 9:30 tomorrow morning.

● Mr. HUDDLESTON. Mr. President, during the long debate on waterway user charges or taxes many studies have been done regarding the amount of Federal expenditures that have gone toward navigation.

In most cases, these studies have been used as the basis for making a determination on what level of charge or tax should be imposed on the water transportation industry.

However, my research into this matter has disclosed some very serious questions about the data used in these studies and the resulting conclusions that have been drawn.

More specifically, I believe that the data used in these studies is very misleading and, as I said in a letter to the Army Corps of Engineers, should not be used as the basis of establishing national policy.

I would like to place in the RECORD several letters and documents which draw

into question the data used in these studies.

First, I would like to place in the RECORD a letter from Brig. Gen. Drake Wilson, acting director of civil works for the corps, to Mr. Bernard Shapiro, chief of staff of the Joint Committee on Taxation.

In that letter, General Wilson states that navigation cost statistics supplied to that committee cannot be taken completely at face value. He stated:

Approximately one-fifth of the costs may not be navigation related. We cannot readily resolve the matter of what portions of this residual amount might be more properly allocated to other water resource project purposes such as recreation, water supply, or even flood control.

Then he further states that even the remaining four-fifths "may be significantly overstated, from a nationwide perspective."

I ask that this letter be placed in the RECORD.

The material follows:

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D.C., September 12, 1977.

Mr. BERNARD M. SHAPIRO,
Chief of Staff, Joint Committee on Taxation, Longworth House Office Building, Washington, D.C.

DEAR MR. SHAPIRO: I am pleased to respond to your 29 August 1977 letter, addressed to Lieutenant General J. W. Morris, Chief of Engineers, requesting an Agency estimate of the proportion of Corps of Engineers waterway operations, maintenance and rehabilitation (OM&R) expenditures allocable to shallow-draft navigation (see page 17, Committee Print, "Tax Aspects of Financing the Inland Waterway System").

In order to respond precisely, the Civil Works staff would, indeed, have to scrutinize historical costs, at the District level, in considerable detail. There is no way to circumvent doing this on a disaggregated basis, i.e., by individual cost subaccounts under the Navigation Locks and Dams project classification specified in our regulation, and allocating a percentage of each cost to the beneficial uses. This would have to be accomplished on a project-by-project basis, since beneficial uses vary depending upon the provisions of individual project authorizations, the complexities of the Separable Costs-Remaining Benefits (SCRB) methodology for cost allocations, and the vagaries which may result from attempting to manipulate an accounting system to resolve current public policy issues. A major analytical effort would be unavoidable, culminating in detailed examinations of individual project cost allocations.

I appreciate the need to provide a reasonably valid estimate to assist you in responding to members' inquiries. Therefore, we derived an order of magnitude estimate by analyzing the Navigation Locks and Dams cost codes for a statistically significant sample of major water projects for a single fiscal year. Approximately one-fifth of the costs may not be navigation-regulated. We cannot readily resolve the matter of what portions of this residual amount might be more properly allocated to other water resource project purposes such as recreation, water supply, or even flood control.

More importantly, since my staff has had to scope its effort in the interests of time, I am convinced that the extent of work allocable to navigation, which some may readily infer must be the remaining four-fifths, may be significantly overstated, from a nationwide perspective. From the standpoint of scrutinizing individual projects, it may be either overstated, or, in rare instances, understated. Given the luxury of both adequate time and resources to examine our records over a period of years to account for annual variations, I imagine that the estimate could change. I suggest that it may prove useful to your staff and the members if they know what cost categories are included and what these categories actually encompass. Therefore, I am inclosing the portion of our regulations that contains cost accounts and descriptions.

The "Note" accompanying the aforementioned Committee Print Table I contains an inaccuracy. This information was provided telephonically and, apparently, an error in interpretation resulted. The figures we furnished do include the portions of OM&R expenditures for multiple purpose projects with power allocable to navigation, and they do exclude the United States Coast Guard outlays for its "Aids to Navigation" program. But, we never intended to convey the impression that all fish and wildlife and recreation costs were eliminated from our tabulations.

This misunderstanding illuminates the fundamental difficulties of apportioning navigation OM&R to commercial versus recreation users. We have not in the past, and cannot presently separate, with absolute precision, commercial lockages from recreation lockages. Analogously, we cannot draw a clear demarcation line between OM&R costs incurred strictly for the benefit of commercial tows and OM&R costs incurred strictly for recreation craft. I hope that we have not contributed in any way to the erroneous belief, which has gained some currency, that our estimates of expenditures benefitting shallow-draft navigation using the inland and intracoastal waterways can be construed as expenditures for commercial navigation only.

Sincerely,

DRAKE WILSON,
Brigadier General, USA,
Acting Director of Civil Works.

Mr. HUDDLESTON. Mr. President, a second letter which I have was from Marvin Rees, executive director of civil works for the corps, to John Bruce of the House Merchant Marine and Fisheries Committee.

In the letter, Mr. Rees states:

In this case, our Construction-Operations Division has allocated to the navigation purpose 13.6 percent of the nationwide annual construction and O. & M. expenditures for multiple purpose projects benefiting navigation, and 25 percent of the annual construction and O. & M. expenditures for the major Mississippi River and Tributaries project. This project is, however, largely for flood control, not the 9-foot navigation channel. It is a matter of judgment what percentage of the actual expenditures should be allocated to navigation. We do not maintain an annual breakdown of expenditures by project purpose.

I ask unanimous consent that this letter be placed in the RECORD.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D.C., September 1, 1976.

Mr. JOHN BRUCE,
Professional Staff Member (Minority), Merchant Marine and Fisheries Committee, Longworth House Office Building, Washington, D.C.

DEAR MR. BRUCE: In response to your telephone request of Mrs. Helen Ramatowski, Legislative Coordination, I am pleased to provide the enclosed table which summarizes U.S. Army Corps of Engineers Fiscal Years 1974 and 1975 expenditures for construction as well as operations and maintenance (O&M) on inland and intra-coastal waterways, coastal channels and harbors, and Great Lakes harbors and channels.

I have also enclosed a second table covering Fiscal Years 1959–1975 which itemizes total navigation expenditures for construction and O&M by fiscal year. These figures represent actual expenditures and are not rendered in terms of constant dollars.

I would like to caution you that there are numerous complexities involved in compilations of this nature. The Corps of Engineers has long maintained its financial records to satisfy budgetary purposes. For example, inland and intracoastal waterway O&M expenditures are generally organized by reaches of the river and aggregated to conform to Corps' district boundaries. We are now receiving numerous inquiries requiring different aggregations and our responses frequently involve protracted effort and manipulation of recorded statistics.

In this case, our Construction-Operations Division has allocated to the navigation purpose 13.6 percent of the nationwide annual construction and O&M expenditures for multiple-purpose projects benefiting navigation, and 25 percent of the annual construction and O&M expenditures for the major Mississippi River and Tributaries project. This project is, however, largely for flood control, not the nine-foot navigation channel. It is a matter of judgment what percentage of the actual expenditures should be allocated to navigation. We do not maintain an annual breakdown of expenditures by project purpose.

While the expenditure figures I am furnishing may not be all-inclusive, I hope that this information will suffice for your immediate needs. If you should require anything else, please let me know.

Sincerely yours,

MARVIN W. REES,
Colonel, Corps of Engineers,
Executive Director of Civil Works.

Mr. HUDDLESTON. Mr. President, third, I have a letter from General Wilson to me in which he responded to my concerns about using data to establish national policy when that data is not totally definitive.

In his letter General Wilson states that "our present system of accounting does not allow us to identify costs for more specific project features, such as commercial navigation" even though many expenditures are lumped in an overall category called navigation.

He further states:

It is also true that the Corps would be unable to determine the precise costs applied to commercial navigation without a detailed project by project analysis.

General Wilson states that under current accounting "we find that some projects have been complicated by numerous changes in authorized purposes which make exact cost allocation extremely difficult and time consuming."

I ask unanimous consent that this letter be placed in the RECORD.

JANUARY 30, 1978.

Hon. WALTER D. HUDDLESTON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HUDDLESTON: This is in reply to your recent letter to Lieutenant General J. W. Morris, Chief of Engineers, in which you raised questions on figures used to determine costs of navigation borne by the Federal Government.

It is true that the Corps in allocating costs to various project beneficial purposes uses broad categories for cost breakdowns. Our present system of accounting does not allow us to identify costs for more specific project features, such as commercial navigation. This is compounded further by the inability to subdivide the commercial navigation account into costs for commodity transportation and recreation on the waterways. Even when identifying costs applied to the broad categories such as navigation, we find that some projects have been complicated by numerous changes in authorized purposes which make exact cost allocation extremely difficult and time consuming. Thus, you are correct in assuming that use of such figures might be misleading and certainly not precise if to be used in identifying costs for separate commercial navigation aspects from the overall project.

It is also true that the Corps would be unable to determine the precise costs applied to commercial navigation without a detailed project by project analysis. Such an undertaking would require a substantial effort in terms of money, manpower and time to review each project in the current system.

However, recognizing the limitations of our present accounting methods and the need to provide cost data on a more detailed basis, we are determining actions considered necessary to establish a system which will allow more precise identification of costs related to specific project purposes by waterway segments.

Sincerely,

DRAKE WILSON,
Brigadier General, USA,
Deputy Director of Civil Works.

Mr. HUDDLESTON. Mr. President, fourth, I have another letter addressed to me from General Wilson in which he breaks down the cost allocation for operation and maintenance costs for river transportation within the Louisville, Ky., district.

It shows that as much as 25 percent of the costs on some rivers that the corps has labeled navigation is actually expenditures for recreation, water quality, or other uses.

This is highly significant because it indicates how misleading some of this data can be.

I ask unanimous consent that this letter be placed in the RECORD.

MARCH 30, 1978.

Hon. WALTER D. HUDDLESTON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HUDDLESTON: This is in further response to my letter of 14 March 1978, regarding our inland waterway transportation system within the Louisville District. The information regarding Operation and Maintenance costs that are generated by navigation versus recreation, water quality and other related uses is compared below for fiscal year 1977.

FISCAL YEAR 1977 OPERATION AND MAINTENANCE (O. & M.) COSTS FOR RIVER TRANSPORTATION SYSTEM WITHIN THE LOUISVILLE DISTRICT

River system	Fiscal year 1977 O. & M. costs for navigation	Expressed as percent of total	Fiscal year 1977 O. & M. costs for recreation water quality and other related uses	Expressed as percent of total	Fiscal year 1977 total O. & M. costs
Ohio River (within Louisville District)	7,072,435	74.9	2,367,719	25.1	9,440,154
Green and Barren Rivers	804,771	85.8	133,307	14.2	938,078
Kentucky River	2,260,382	85.8	374,657	14.2	2,635,039
Total	10,137,588	77.9	2,875,683	22.1	13,013,272

In addition, I am furnishing you a table of commercial lockages versus recreational lockages for calendar year 1977. It should be noted that one recreational lockage may represent several small recreation craft in the lock chamber.

It is also of interest that the reported Operation and Maintenance costs for navigation on the Kentucky River do not reflect the predominantly recreational use of that resource. One major cause for this discrepancy is that the antiquated structures required costly repairs to the locks and dams, particularly at Locks 1 through 4. The continued maintenance of these structures is most important from a recreation/navigation viewpoint. The slackwater pools formed by the Kentucky River navigation system are an extremely vital water supply resource for twelve communities, the largest being Lexington, Kentucky, with an estimated 1976 population of 200,000.

CALENDAR 1977 COMMERCIAL VERSUS RECREATIONAL LOCKAGES FOR RIVER TRANSPORTATION SYSTEM WITHIN THE LOUISVILLE DISTRICT

River system	Commercial lockages, 1977	Expressed as percent of total	Recreation lockages 1977	Expressed percent of total	1977 total lockages
Ohio River (within Louisville District)	60,887	85.8	10,092	14.2	70,979
Green River	10,137	98.5	150	1.5	10,287
Kentucky River	2,024	21.6	7,325	78.4	9,349
Total	73,048	80.6	17,567	19.4	90,615

I trust that this additional information will prove useful to you in your review of the inland waterway system. Please feel free to contact me if you have further questions on this matter.

Sincerely yours,

W. K. WILSON III,
LTC, Corps of Engineers,
Acting District Engineer.

Mr. HUDDLESTON. Finally, I received a letter today from Col. Thomas Nack, district engineer in Louisville, which reaches similar conclusions. I ask that this letter be placed in the RECORD.

DEPARTMENT OF THE ARMY,
LOUISVILLE DISTRICT CORPS OF ENGINEERS,
Louisville, Ky., May 2, 1978.

HON. WALTER D. HUDDLESTON,
U.S. Senate, Washington, D.C.

DEAR SENATOR HUDDLESTON: This is in response to our telephone conversation with your staff this date concerning the manner in

which we budget and expend operation and maintenance (O&M) funds for navigation.

We have never tried to quantify or assign specific dollar amounts in the O&M category to major benefactors (or users) of our river navigation system. For example, in FY 77, we spent $2,260,000 in O&M funds on the Kentucky River System. Our budget breakdown for the year shows that 85.8 percent of this amount was spent for commercial navigation and 14.2 percent for recreation, water quality, and other uses. Of the 85.8 percent for navigation, approximately 30 percent was for major rehabilitation of lock walls and dams built in 1830. If we assigned our O&M costs on this river to the major users, recreational boating and other uses, the figures would be almost reversed since 78.4 percent of the lockages on this river were for noncommercial, recreational boats. The figures for noncommercial users would even be higher if some charge was made for the increased reliability of water supply. Even though water supply is not a project purpose for the Kentucky River, the nature of the navigation structures provides an increased reliability. Presently, there are 12 communities that use the navigation pool of the Kentucky River as their major source of water supply. Also, under our current budget procedure, we do not determine, or assign, any charge to O&M for the value that recreational boaters receive from use of the navigational pools.

Last year in the Louisville District portion of the Ohio River Navigation System, we assigned 74.9 percent of the O&M costs to navigation and 25.1 percent to recreation, water quality, and other uses. These assignments do not present a true and accurate cost for commercial navigation if the costs are assigned to the major users or benefactors based on their use or benefit. The major communities along the Ohio River, the major industrial complexes, and the electrical generating plants that tap into the slackwater pools formed by our navigation structures are benefactors to which no part of the O&M costs are assigned. Even in the unlikely event that commercial navigation became a minor user of the Ohio River system as is the case on the Kentucky River, it would still be a vital necessity to continue a substantial level of operation and maintenance of the Ohio River System for the other water resource uses.

At this point in time, I cannot furnish you with true and accurate O&M costs (based on a user/benefactor concept) for commercial navigation alone. This would require authorization for a major study and a complete revision of our present budgeting procedure for O&M. However, from annual appropriation of O&M funds for Louisville District navigation projects, many activities that are directly, indirectly, and unrelated to navigation are funded each year from these appropriations. The following will provide some insight as to what these activities consist of, such as: administration of Government land leased for recreation or fish and wildlife purposes; monitoring of sewage treatment plants for recreation sites; maintenance of grounds and facilities for recreation; preparation of master plans; preparation of environmental impact statements; collection and analysis of data to be used for the development of future navigation projects; preparation of river pool maps; navigation replacement studies; earthquake instrumentation; collection and evaluation of rainfall, water quality, and river flow data; project boundary monumentation; operation and maintenance of visitor centers; visitation surveys; management of Government lands for Fish and Wildlife purposes; identification and administration of cultural resources; visitor protection at recreational areas; and dredging of recreational boat ramps and channels, just to name several. A detailed study effort would be necessary to quantify the benefits and benefactors of each of these activities. While not included in any of the funds appropriated for O&M of Louisville District's navigation projects, some corps Districts expend O&M funds for hydropower and flood control activities at multi-purpose projects which are so designed and Congressionally authorized.

I regret that we are not in a position at this time to furnish you with more definite, reliable cost analysis. Please feel free to contact me if you have further questions or if we can be of further assistance.

Sincerely yours,

THOMAS P. NACK,
Colonel, Corps of Engineers,
District Engineer.

Mr. HUDDLESTON. In conclusion, Mr. President, let me say that some of the data that has been used to justify high-level waterway user charges or taxes has been extremely misleading and I do not believe we should formulate public policy based on such information.

It shows just how inconclusive the facts are about the impact that waterway user charges will have on river traffic. And it shows how careful we should be in embarking on such a new policy.

As I said before the Senate Finance Committee, I had rather be careful than sorry.●

REMOVAL OF INJUNCTION OF SECRECY, EXECUTIVE H, 95TH CONGRESS, 2D SESSION

Mr. GRAVEL. Mr. President, as in executive session, I ask unanimous consent that the injunction of secrecy be removed from the Convention with the Kingdom of Morocco for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, signed at Rabat on August 1, 1977 (Executive H, 95th Congress, second session), transmitted to the Senate today by the President; and ask that the treaty be considered as having been read the first time, that it be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's message be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE PRESIDENT

To the Senate of the United States:

I transmit herewith, for Senate advice and consent to ratification, the Convention between the Government of the United States of America and the Kingdom of Morocco for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, signed at Rabat on August 1, 1977.

There is no convention on this subject presently in force between the United States and Morocco.

The Convention follows generally the form and context of most conventions of this type recently concluded by the United States. However, it contains some modifications of the standard provisions to accommodate the special need of Morocco as a developing country to minimize any revenue loss. Its primary purpose is to identify clearly each country's interest in avoiding double taxation and preventing the illegal evasion of taxation.

For the information of the Senate, I also transmit the report of the Department of State on to the Convention.

This Convention would promote closer economic cooperation and more active trade between the United States and Morocco by assuring investors about their tax liability, reducing the foreign tax in many cases and providing for cooperation between the two countries to avoid double taxation.

I urge the Senate to act quickly on this Convention and to give its advice and consent to ratification.

JIMMY CARTER.

THE WHITE HOUSE, *May 2, 1978.*

ROUTINE MORNING BUSINESS

Mr. GRAVEL. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, not to exceed 5 minutes, with statements therein limited to 5 minutes, for the purpose only of introducing bills, resolutions, statements, and reports.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

REPORT OF THE FEDERAL COUNCIL ON AGING—MESSAGE FROM THE PRESIDENT—PM 173

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report, which was referred to the Committee on Human Resources:

To the Congress of the United States:

I am transmitting herewith the annual report of the Federal Council on Aging in accordance with Section 205(f) of the Older Americans Act (P.L. 93–29).

As you know, the Council was created by the Congress to represent older Americans and make recommendations to the President, the Secretary of the Department of Health, Education, and Welfare, the Commissioner of the Administration on Aging, and the Congress on Federal policies regarding the aging and federally conducted or assisted programs and other activities relating to or affecting them. This report describes the Council's concerns and projects as well as specific advocacy positions taken by the Council on Federal policies and programs affecting the elderly.

In my first year in office, the Council has been of great assistance in their unanimous support of strengthened financing of the social security system. As you know the Congress acted expeditiously to enact the 1977 Social Security Act amendments which I signed into law December 20, 1977. These measures will serve to assure a secure income for many older Americans in future years. I hope that the Congress will act this year on the Better Jobs and Income Act in response to the Council's earnest desire

for the early enactment of welfare reform which affects many areas of "vital concern to older Americans."

While the Council recognizes that all of the concerns expressed in the report cannot be fully dealt with in the immediate future, I look forward to a continued close working relationship with the Council as evidenced by my appointment of Chairman Nelson Cruikshank as my Counselor on Aging.

In closing, let me assure you that we will continue to carefully consider the views of the Council as social and economic policy affecting the elderly is developed and implemented in the years to come.

JIMMY CARTER.

THE WHITE HOUSE, *May 2, 1978.*

REPORT ON TITLE VI OF THE HOUSING AND COMMUNITY DEVELOPMENT ACT—MESSAGE FROM THE PRESIDENT—PM 174

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report, which was referred to the Committee on Banking, Housing, and Urban Affairs:

To the Congress of the United States:

In accordance with Section 626 of the National Mobile Home Construction and Safety Standards Act of 1974, I am transmitting the Third Annual Report to Congress on Title VI of the Housing and Community Development Act of 1974 (Mobile Homes).

JIMMY CARTER.

THE WHITE HOUSE, *May 2, 1978.*

MESSAGES FROM THE HOUSE

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

At 1:10 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its enrolling clerks, announced that the Speaker has signed the following enrolled bills and joint resolutions:

S. 917. An act to provide for conveyance of certain lands adjacent to the Gund Ranch, Grass Valley, Nev., to the University of Nevada;

S. 958. An act for the relief of Ernesto F. Garcia, Jr.;

S. 2220. An act to authorize the Secretary of the Treasury to designate an Assistant Secretary to serve in his place as a member of the Library of Congress Trust Fund Board;

S.J. Res. 106. A joint resolution to provide for the reappointment of A. Leon Higginbotham, Jr., as a citizen regent of the Board of Regents of the Smithsonian Institution;

S.J. Res. 107. A joint resolution to provide for the reappointment of John Paul Austin as a citizen regent of the Board of Regents of the Smithsonian Institution; and

S.J. Res. 108. A joint resolution to provide for the appointment of Anne Legendre Armstrong as citizen regent of the Board of Regents of the Smithsonian Institution.

The enrolled bills and joint resolution were subsequently signed by the Acting President pro tempore (Mrs. HUMPHREY).

At 3:22 p.m., a message from the House of Representatives delivered by Mr. Berry, announced that the House agrees to the amendment of the Senate to the bill (H.R. 1552) for the relief of Oh Soon Yi.

The message also announced that the House has passed the following bill and joint resolution, in which it requests the concurrence of the Senate:

H.R. 11657. An act to authorize appropriations to carry out the Central, Western, and South Pacific Fisheries Development Act until the close of fiscal year 1983, and for other purposes; and

H.J. Res. 816. A joint resolution to extend the authority of the Federal Reserve banks to buy and sell certain obligations.

HOUSE BILL AND JOINT RESOLUTION REFERRED

The following bill and joint resolution were read twice by their titles and referred as indicated:

H.R. 11657. An act to authorize appropriations to carry out the Central, Western, and South Pacific Fisheries Development Act until the close of fiscal year 1983, and for other purposes; to the Committee on Commerce, Science, and Transportation.

H.J. Res. 816. A joint resolution to extend the authority of the Federal Reserve banks to buy and sell certain obligations; to the Committee on Banking, Housing, and Urban Affairs.

ENROLLED BILLS AND JOINT RESOLUTIONS PRESENTED

The Secretary of the Senate reported that on today, May 2, 1978, he presented to the President of the United States the following enrolled bills and joint resolutions:

S. 917. An act to provide for conveyance of certain lands adjacent to the Gund Ranch, Grass Valley, Nev., to the University of Nevada;

S. 958. An act for the relief of Ernesto F. Garcia, Jr.;

S. 2220. An act to authorize the Secretary of the Treasury to designate an Assistant Secretary to serve in his place as a member of the Library of Congress Trust Fund Board;

S.J. Res. 106. A joint resolution to provide for the reappointment of A. Leon Higginbotham, Jr., as a citizen regent of the Board of Regents of the Smithsonian Institution;

S.J. Res. 107. A joint resolution to provide for the reappointment of John Paul Austin as a citizen regent of the Board of Regents of the Smithsonian Institution; and

S.J. Res. 108. A joint resolution to provide for the appointment of Anne Legendre Armstrong as citizen regent of the Board of Regents of the Smithsonian Institution.

COMMUNICATIONS

The PRESIDING OFFICER laid before the Senate the following communications, together with accompanying reports, documents, and papers, which were referred as indicated:

EC–3486. A communication from the Secretary of Agriculture, transmitting a draft of proposed legislation to provide a voluntary self-help program which is designed to assist producers of agricultural products to protect themselves against loss of production when natural or uncontrollable conditions adversely affect production and which will assure consumers that producers will be able to continue to produce food and fiber; to the Committee on Agriculture, Nutrition, and Forestry.

EC–3487. A communication from the Acting Director, Defense Security Assistance Agency, reporting, pursuant to law, concerning the U.S. Government's proposed letter of offer to Israel for defense articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC–3488. A communication from the Acting Director, Defense Security Assistance Agency, reporting, pursuant to law, concerning the U.S. Government's proposed letter of offer to Israel for defense articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC–3489. A communication from the Acting Director, Defense Security Assistance Agency, reporting, pursuant to law, concerning the U.S. Government's proposed letter of offer to Saudi Arabia for defense articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC–3490. A communication from the Acting Director, Defense Security Assistance Agency, reporting, pursuant to law, concerning the U.S. Government's proposed letter of offer to Egypt for defense articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC–3491. A communication from the Deputy Assistant Secretary of the Army (Manpower and Reserve Affairs), transmitting a draft of proposed legislation to amend section 2107 of the United States Code, to remove the limitation on the number of cadets or midshipmen who may be appointed from the 2-year Senior Reserve Officers' Training Corps Course; to the Committee on Armed Services.

EC–3492. A communication from the Assistant Secretary of the Army (Manpower and Reserve Affairs), transmitting a draft of proposed legislation to amend section 4349(a) of title 10, United States Code, to provide that the companies of the Corps of Cadets at the U.S. Military Academy may be commanded by commissioned officers of the Army, Navy, Air Force, or Marine Corps; to the Committee on Armed Services.

EC–3493. A communication from the Assistant Deputy Chief of Naval Material (Contracts and Business Management), Headquarters Naval Material Command, Department of the Navy, transmitting, pursuant to law, the Department of the Navy's semiannual report of research and development procurement actions of $50,000 and over, covering the period October 1, 1977 through March 31, 1978; to the Committee on Armed Services.

EC–3494. A communication from the Chairman, Securities and Exchange Commission, transmitting a draft of proposed legislation to amend the Securites Act of 1933 and the Trust Indenture Act of 1939 to delete the existing exemption for certain industrial development bonds; to the Committee on Banking, Housing, and Urban Affairs.

EC–3495. A communication from the President and Chairman, Export-Import Bank of the United States, reporting, pursuant to law, on loan, guarantee and insurance transactions supported by Eximbank during March 1978 to Communist countries (as defined in section 620(f) of the Foreign Assistance Act of 1961, as amended); to the Committee on Banking, Housing, and Urban Affairs.

EC–3496. A communication from the Secretary of Energy, transmitting a draft of proposed legislation to authorize the Secretary of Energy to enter into cooperative arrangements to contain and reduce potential radiation exposure from residual radioactive materials, and for other purposes; to the Committee on Energy and Natural Resources.

EC–3497. A communication from the Acting General Counsel, Department of

Energy, reporting, pursuant to law, notice of a meeting related to the International Energy Program; to the Committee on Energy and Natural Resources.

EC–3498. A communication from the Secretary of the Interior, transmitting, pursuant to law, the combined first decade report and the 1977 annual report of the National Park Foundation; to the Committee on Energy and Natural Resources.

EC–3499. A communication from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to amend the act of June 3, 1960 (74 Stat. 156), to provide additional authority for the Secretary of the Interior to construct the San Luis Unit, Central Valley Project, Calif., and for other purposes; to the Committee on Energy and Natural Resources.

EC–3500. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Nuclear Powerplant Licensing: Need for Additional Improvements," April 27, 1978; to the Committee on Environment and Public Works.

EC–3501. A communication from the Cochairmen, New England Regional Commission, transmitting, pursuant to law, its 1977 annual report; to the Committee on Environment and Public Works.

EC–3502. A communication from the Administrator, General Services Administration, transmitting, pursuant to law, a report of building project survey for Savannah, Ga.; to the Committee on Environment and Public Works.

EC–3503. A communication from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States within 60 days after the execution thereof; to the Committee on Foreign Relations.

EC–3504. A communication from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States within 60 days after the execution thereof; to the Committee on Foreign Relations.

EC–3505. A secret communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on the major issues of the cruise missile systems; to the Committee on Governmental Affairs.

EC–3506. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Challenges of Protecting Personal Information in an Expanding Federal Computer Network Environment," April 28, 1978; to the Committee on Governmental Affairs.

EC-3507. A communication from the Administrator, General Services Administration, transmitting, pursuant to law, reports on records management and records disposition activities of the Federal Government during fiscal year 1977; to the Committee on Governmental Affairs.

EC–3508. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Impact of Antirecession Assistance on 52 Governments—An Update," May 1, 1978; to the Committee on Governmental Affairs.

EC-3509. A secret communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on the major issues of the Army's Copperhead and the Navy's 5-inch and 8-inch guided projectile programs; to the Committee on Governmental Affairs.

EC-3510. A communication from the Administrator, General Services Administration, transmitting a draft of proposed legislation to amend the Federal Property and Administrative Services Act of 1949, as amended, to permit recovery of the estimated replacement cost, in lieu of the original acquisition cost, of major vehicles and related equipment used in the interagency motor pool system; to the Committee on Governmental Affairs.

EC-3511. A communication from the Mayor, the District of Columbia, responding, pursuant to law, to the Comptroller General's report (FPCD-77-71) entitled "Federal and District of Columbia Employees Need to be in Separate Pay and Benefit Systems"; to the Committee on Governmental Affairs.

EC–3512. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Examination of the Financial Statements of FHA Insurance Operations for the 15-Month Period Ended September 30, 1976," April 28, 1978; to the Committee on Governmental Affairs.

EC–1513. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Redesigning Shipping Containers to Reduce Food Costs," April 28, 1978; to the Committee on Governmental Affairs.

EC–3514. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Eliminate Administrative Discharges in Lieu of Court-Martial: Guidance for Plea Agreements in Military Courts is Needed," April 28, 1978; to the Committee on Governmental Affairs.

EC–3515. A communication from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting, pursuant to law, final regulation for portions of titles I and IV of Public Law 81–874, financial assistance for local educational agencies in areas affected by Federal activities; to the Committee on Human Resources.

EC–3516. A communication from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting, pursuant to law, final regulation for part 182—cooperative education program; to the Committee on Human Resources.

EC–3517. A communication from the Chairman, National Commission on Libraries and Information Science, transmitting, pursuant to law, the sixth annual report of the National Commission on Libraries and Information Science; to the Committee on Human Resources.

EC–3518. A communication from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting, pursuant to law, final regulations for portions of titles I and IV of Public Law 81–874, financial assistance for local educational agencies in areas affected by Federal activities; to the Committee on Human Resources.

EC–3519. A communication from the Special Assistant for Management, Office of the Special Representative for Trade Negotiations, reporting, pursuant to law, to requests for information on the FIOA Report of 1977; to the Committee on the Judiciary.

EC–3520. A communication from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports covering the period April 3 through April 18, 1978, concerning visa petitions which the Service has approved according the beneficiaries of such petitions third- and sixth-preference classification; to the Committee on the Judiciary.

REPORT OF COMMITTEES

The following reports of committees were submitted:

By Mr. MUSKIE, from the Committee on the Budget, without amendment:

S. Res. 443. A resolution waiving section 303(a) of the Congressional Budget Act of 1974 with respect to consideration of the Conference Report on H.R. 6782 (Rept. No. 95–772).

By Mr. SPARKMAN, from the Committee on Foreign Relations, without amendment:

H. Con. Res. 549. A concurrent resolution praising the U.S. delegation to the Belgrade meeting of the Conference on Security and Cooperation in Europe for its efforts on behalf of human rights, and urging the President to continue to express U.S. opposition to repressive actions and to violations of basic human rights which are contrary to the Helsinki Accords (Rept. No. 95–773).

S. Res. 419. A resolution to express the sense of the Senate on terrorism in Italy (Rept. No. 95–774).

By Mr. ABOUREZK, from the Committee on the Judiciary: Report entitled "Administrative Practice and Procedure" (Rept. No. 95–775).

By Mr. WILLIAMS, from the Committee on Human Resources, without amendment, without recommendation:

H.R. 8410. An act to amend the National Labor Relations Act to strengthen the remedies and expedite the procedures under such act (Rept. No. 95–776).

By Mr. LONG, from the Committee on Finance, with an amendment and an amendment to the title:

H.R. 5052. An act providing for the temporary suspension of duty on photographic color couplers and coupler intermediates (Rept. No. 95–777).

By Mr. LONG, from the Committee on Finance, with amendments:

H.R. 8149. An act to provide customs procedural reform, and for other purposes (Rept. No. 95–778).

By Mr. LONG, from the Committee on Finance: Special Report entitled "Tax Status of Funds Expanded by a Political Committee: Deduction for Senatorial Expenses Incurred While Living Away From Home" (Rept. No. 95–779).

By Mr. PELL, from the Committee on Rules and Administration, without amendment:

S. 3025. An original bill to authorize appropriations for the Federal Election Commission for fiscal year 1979 (Rept. No. 95–780).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. JACKSON, from the Committee on Energy and Natural Resources:

John Kenneth Mansfield, of Connecticut, to be Inspector General of the Department of Energy.

(The above nomination from the Department of Energy and Natural Resources was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

● Mr. JACKSON. Mr. President, today the Committee on Energy and Natural Resources approved the nomination of John Kenneth Mansfield to be Inspector General of the Department of Energy. I ask unanimous consent that his biography and statement to the committee be printed in the RECORD at this time.

I also ask unanimous consent that his sworn financial statement together with a letter dated April 17, 1978 from Eric J.

Fygi, Acting General Counsel of the Department of Energy, regarding Mr. Mansfield's compliance with the Department's conflict of interest provisions be printed in the RECORD at this time.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

JOHN KENNETH MANSFIELD

Mr. Mansfield was born in Chicago, Illinois on October 8, 1921 and he was graduated in 1943 from Northwestern University, where he was elected to Phi Beta Kappa.

Following employment as a wage rate analyst with the National War Labor Board, service in the United States Army in World War II and graduate work at Yale, he became an instructor in Yale's international relations department in 1949.

From 1950 to 1956 he was a staff member of the Joint Congressional Committee on Atomic Energy, where he concentrated on issues concerning nuclear weapons and associated delivery systems.

He next had a tour of duty as Assistant to the Director of the Nuclear Division of Combustion Engineering, Inc., where his responsibilities included overseeing the Division's administrative operations.

In 1959 he became staff director of the Subcommittee on National Policy Machinery of the Senate Committee on Government Operations. Chaired by Senator Henry M. Jackson, the Subcommittee made an across-the-board review of the organization and staffing of our Government in the area of national security.

President Kennedy appointed Mr. Mansfield as the Department of State's first Inspector General of Foreign Assistance in 1962. His office had statutory responsibilities for checking on the efficiency of United States military and economic assistance programs and Peace Corps and P.L. 480 activities.

In 1969 he joined State's Bureau of International Scientific and Technological Affairs and he now works in that bureau's successor organization—the Bureau of Oceans and International Environmental and Scientific Affairs. He has dealt with a variety of foreign policy problems involving developments in science and technology.

Mr. Mansfield has been a consultant to the Congress on high technology problems and an adviser on scientific and technical manpower to the United States delegation to the NATO Parliamentarians Conference. He is also a past member of the Atomic Advisory Group to the Governor (now Senator Ribicoff) of Connecticut, the Board of Trustees of the University of Connecticut and the Board of Directors of the Panama Canal Company.

STATEMENT OF JOHN KENNETH MANSFIELD

It is a great honor for me to appear before you today.

The Congress and the Executive Branch share a common concern in trying to make sure that our nation's energy programs are honestly, efficiently and frugally run. Toward this end, it is important to have organizational mechanisms whose specific job it is to look for instances of fraud and abuse and inefficiency and waste in the conduct of these programs and to make recommendations for corrective action when reviews bring deficiencies to light.

The Inspector General's office of the Department of Energy is such a mechanism. The legislation which created the operation is admirably conceived and drafted. It gives the office the stature, the authority and the independence it needs to do its job effectively.

I believe this office can make a major contribution to the health and well-being of our energy programs. Its work should made it less likely that program weaknesses will go unnoticed and uncorrected. Also, the Inspector General's findings should make it easier for decision-makers to design programs which have effective built-in checks and safeguards against abuse. In fact, the things the office can do to help prevent fires may be even more valuable than the things it can do to help put them out.

Let me now share with you a few thoughts about what I think must be done if the Inspector General operation is to be a success.

First, the office must build a staff of outstanding professional competence and unquestionable integrity. This is the key to almost everything else.

Second, there must be a proper ranking of priorities in the work program of the office. The Inspector General and his staff should go, so to speak, where the money is and where the trouble is. Resources must be concentrated on what seem likely to be the areas of greatest investigative and auditing payoff.

Third, the performance of the office itself must meet or exceed the same standards of efficiency and frugality by which it measures the performance of others. The point needs no belaboring.

Fourth, the work of the office itself must also meet or exceed the same standards of probity by which it measures the work of others. The rule of Caesar's wife must apply.

Fifth, the Inspector General must not himself become desk bound. He must spend as much time as possible where the action is—out in the field with his inspection teams.

Sixth, the office must call the shots as it sees them. There must be no thought of fear or of favor.

I welcome the challenge of the position for which I am being considered and I promise that if I am confirmed I will do my best to justify the confidence which has been placed in me.

FINANCIAL STATEMENT

Provide a complete, current financial net worth statement which itemizes all assets (including bank accounts, real estate, securities, trusts, investments, and other finacial holdings) and all liabilities (including debts, mortgages, loans, and other financial obligations) of yourself, your spouse, and other immediate members of your household.

ASSETS

Cash on hand and in banks, $50,600.

U.S. Government securities—add schedule, $500.

Listed securities—add schedule, $7,220.

Unlisted securities—add schedule, $1,200.

Real estate interests—add schedule, $283,000.

Personal property, $28,000.

Life insurance—cash value. See Annex.

Payments to Federal Government Retirement Fund, $38,000.

Total assets, $408,520.

LIABILITIES

Real estate mortgages payable—add schedule, $61,780.

Loan on life insurance policy, $3,200.

Total liabilities, $64,980.

Net worth, $343,540.

2. Are any assets pledged? (Add schedule.) No.

3. Are you currently a party to any legal action? No.

4. Have you ever declared bankruptcy? No.

5. Has the Internal Revenue Service ever audited your Federal tax return? If so, what resulted from the audit? Yes. See Annex.

STATEMENT FOR COMPLETION BY PRESIDENTIAL NOMINEES

Name: Mansfield, John Kenneth.

Position to which nominated: Inspector General-Dept. of Energy.

Date of birth: August 10, 1921.

Place of birth: Chicago, Illinois.

Marital status: married.

Full name of spouse: Marguerite Jane Shalley Mansfield.

Name and ages of children: None.

Education: Northwestern U., 1939–43, BS degree, 1943; Yale U., 1945–50, (all work completed towards Ph. D. except dissertation).

Employment record: List below all positions held since college, including the title and description of job, name of employer, location, and dates. See Annex.

Honors and awards: List below all scholarships, fellowships, honorary degrees, military medals, honorary society memberships, and any other special recognitions for outstanding service or achievement. I held scholarships at Northwestern University and had a Sterling Fellowship at Yale. I am a member of Phi Beta Kappa.

Memberships: List below all memberships and offices held in professional, fraternal, business, scholarly, civic, charitable and other organizations. None.

Published writings: List the titles, publishers, and dates of any books, articles, or reports you have written. None.

Qualifications: State fully your qualifications to serve in the position to which you have been named.

Future employment relationships:

1. Indicate whether you will sever all connections with your present employer, business firm, association or organization if you are confirmed by the Senate. I am now an employee of the Federal Government.

2. As far as can be foreseen, state whether you have any plans after completing government service to resume employment, affiliation or practice with your current or any previous employer, business firm, association or organization. If I am confirmed and become the Inspector General. I may wish to remain in Federal Government service at the completion of my Inspector General tour.

3. Has anybody made you a commitment to a job after you leave government? No.

4. Do you expect to serve the full term for which you have been appointed? Yes.

Potential conflicts of interest:

1. Describe any financial arrangements or deferred compensation agreements or other continuing dealings with business associates, clients or customers who will be affected by policies which you will influence in the position to which you have been nominated. None.

2. List any investments, obligations, liabilities, or other relationships which might involve potential conflicts of interest with the position to which you have been nominated. See last item in Annex—Real Estate Owned by My Wife.

3. Describe any business relationship, dealing or financial transaction (other than tax-paying) which you have had during the last 10 years with the Federal Government, whether for yourself or relatives, on behalf of a client, or acting as an agent, that might in any way constitute or result in a possible conflict of interest with the position to which you have been nominated. None.

4. List and describe any lobbying activity during the past 10 years in which you have engaged for the purpose of directly or indirectly influencing the passage, defeat or modification of any legislation at the national level of government or for the purpose of affecting the administration and execution of national law or public policy. None.

5. Explain how you will resolve any potential conflict of interest that may be disclosed by your responses to the above items. See last item in Annex—Real Estate Owned By My Wife

---

ANNEX

Footnotes to Net Worth Statement:

U.S. Government securities are Savings Bonds

Schedule of Securities. We own the following stocks:

LISTED SECURITIES COMPANY

500 shares, Cole National, $5,950.
315 shares, Cole Consumer Products, $1,270.

UNLISTED SECURITIES

100 shares, Marine Bank of Chincoteague, $1,200.

Life Insurance: I have $68,000 worth of Life insurance. The bulk of this is Federal Government insurance with no cash value.

REAL ETATE INTERESTS

Property Present Market Value:
Home in D.C. $148,000;
House, Danbury, Conn., $65,000;
Commercial property, Danbury, Conn., $70,000.

Mortgages: We have a mortgage of $31,800 on our home and a mortgage of $29,980 on the Connecticut house in which my mother-in-law lives.

Federal Income Tax Audit: Our 1969 Federal income tax was audited. IRS ruled that we had exceeded the total allowable depreciation on a house, that we should have depreciated and capitalized a furnace rather than treating its purchase as a repair, and that we had incorrectly allocated the business and personal portions of certain maintenance expenses. We paid an additional $731 in taxes as a result of the audit. (Of this amount of money, $437 had to do with the furnace. We have been recapturing this latter sum through depreciation entries on our annual income tax returns). Because of the depreciation ruling we will also be liable for an additional $1669 in taxes if we ever sell the house in question.

EMPLOYMENT RECORD

1943–45, National War Labor Board, Chicago, Ill., Wage Rate Analyst; I processed applications for wage and salary increases for newspaper industry employees and determined whether they were within limits allowed by Federal Government Executive Orders.

1949–50, Yale University, New Haven, Conn., Instructor; I taught courses in International Relations.

1950–56, Joint Congressional Committee on Atomic Energy, Washington, D.C., Staff Member; during my first three years with the committee I worked mainly on programs aimed at strengthening the nation's nuclear weapons stockpile. Subsequently most of my time was spent on programs for speeding progress on the development of the Polaris and Intercontinental Ballistic Missiles.

1956–59, Nuclear Div. Combustion Engineering, Inc., Windsor, Conn., Assistant to Director; part of my responsibilities consisted of overseeing the administrative operations of the division, including nuclear materials accountability. The main job of the division was designing and building a submarine nuclear power plant.

1959–62, Subcommittee on National Policy Machinery, Senate Committee on Government Operations, Washington, D.C., Staff Director; under the chairmanship of Senator Henry M. Jackson, the Subcommittee conducted the first across-the-board Congressional review of the workings of the National Security Council and the organization and staffing of the Federal Government in the area of national security.

1962–69, Department of State, Washington, D.C., The Inspector General of Foreign Assistance. (Rank of Assistant Secretary of State); the Inspector General's office was created by the Congress and was given statutory responsibilities for checking on the efficiency and economy of United States economic and military assistance programs, and Peace Corps and Food for Peace activities. My duties involved extensive travel through East and South Asia, the Middle East, Africa and Latin America.

1969–73, Department of State, Washington, D.C., Staff Member, Bureau of International Scientific and Technological Affairs, 69–73; I worked on a wide variety of foreign policy problems involving developments in science and technology. My responsibilities included serving as the Executive Secretary of the Secretary of State's Advisory Committee on Science and Foreign Affairs.

1974– Department of State, Washington, D.C., Special Assistant to the Assistant Secretary for Oceans and International Environmental and Scientific Affairs; I have worked on a broad spectrum of policy issues having to do with such matters as environmental problems, the science and technology attaches program and technology transfer questions.

QUALIFICATIONS

Most of my jobs have been ones in which I have learned things which should be useful in the position for which I am now being considered. I have in mind especially the skills acquired during the organizational and programmatic watchdogging and trouble shooting I did while I was a Congressional staff member, the perspectives derived while I worked in the energy area of the private sector, the experience gained during my tour of duty as the Department of State's first Inspector General of Foreign Assistance and the knowledge secured on those assignments in my subsequent jobs in State which have had to do with energy related issues and problems.

REAL ESTATE OWNED BY MY WIFE

For many years my wife has owned a small two pump gas station in Danbury, Connecticut. An independent retailer now leases the station and pays my wife a fixed monthly rental of $350. He also pays the property tax. The lease has not quite four years to run.

A frame house situated roughly ten feet from the station building is also owned by my wife. From the standpoint of a prospective property buyer the two adjoining properties form one natural unit (the station sits on what was once part of the garden of the house) and we are told it would be finacially very disadvantageous for my wife ever to sell the station without at the same time selling the house.

My wife's widowed mother has lived in the frame house for thirty years and wishes to continue living there. My wife therefore does not want to sell the house.

If I am confirmed, and if during the course of my work an occasion ever arises in which through some action on my part I could conceivably influence the value or operations of the gas station I would disqualify myself.

DEPARTMENT OF ENERGY,
Washington, D.C., April 17, 1978.

Hon. HENRY M. JACKSON,
Chairman, Committee on Energy and Natural Resources, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request for an opinion as to the effect of the conflict of interest provisions contained in Title VI of the Department of Energy Organization Act (Pub. L. 95–91) on the financial holdings of John Kenneth Mansfield, who has been nominated to be Inspector General of the Department of Energy.

Section 602(a) of the Department of Energy Organization Act ("Act") prohibits supervisory employees of the Department of Energy from knowingly receiving compensation from, holding any official relation with, owning the stocks or bonds of, or having any pecuniary interest in, any energy concern. "Energy concern," defined in Section 601(b) of the Act, is described in terms of entities "significantly engaged in the business" of a variety of activities related to energy production, distribution, sale, research and development, as well as entities engaged in such research and development functions pursuant to DOE-funded programs irrespective of whether they otherwise are engaged in such "business." The precise boundaries of that term are currently being explored. Nonetheless, it is possible to make some initial determinations with respect to identifying energy concerns within the meaning of the statute. A list of energy concerns required by Section 601(c)(1) of the Act was published on March 2, 1978.

As you know, a list of Mr. Mansfield's financial holdings has been provided to the Committee. None of his financial holdings appears on the published list and, hence, none is subject to divestiture in connection with his assuming the position of Inspector General. As the energy concern list is revised, however, it may be determined in the future that some of Mr. Mansfield's holdings may have to be divested.

Mr. Mansfield's wife owns improved realty in Danbury, Connecticut, a portion of which is used as a residence by her widowed mother, and a portion of which is leased for a fixed term and fixed monthly rental to an independent automotive fuel retailer. We have advised Mr. Mansfield that he should not participate as a government employee, personally and substantially, in any particular matter the outcome of which could have a direct and predictable effect on his wife's financial interest in this property.

If I can be of further assistance, please do not hesitate to contact me.

Sincerely,

ERIC J. FYGI,
Acting General Counsel.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. HELMS:

S. 3018. A bill to amend the Federal Food, Drug, and Cosmetic Act to provide that drugs will be regulated under the Act solely to assure their safety, to promote pharmaceutical development and innovation, the efficient and fair treatment of new drug applications, the health of the American people, and for other purposes; to the Committee on Human Resources.

By Mr. FORD:

S. 3019. A bill for the relief of Falicita Smith; to the Committee on the Judiciary.

By Mr. EASTLAND (for himself and Mr. STENNIS):

S. 3020. A bill to provide for the conveyance to the Holmes County School District of all the right, title, and interest of the United States in and to a certain tract of land in Holmes County, Mississippi; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. CRANSTON (by request):

S. 3021. A bill to amend title 38, United States Code, to provide readjustment professional counseling to Vietnam-era veterans and their families, and for other purposes; to the Committee on Veterans' Affairs.

S. 3022. A bill to amend title 38, United States Code, in order to extend the authority of the Administrator to make grants and carry out a pilot program for the exchange of medical information between Veterans Administration facilities and the medical community, and for other purposes; to the Committee on Veterans' Affairs.

S. 3023. A bill to amend title 38, United States Code, to limit the circumstances under which the expenses of travel of certain veterans traveling to or from a Veterans Administration facility in connection with the furnishing of medical care and treatment for

non-service-connected disabilities will be reimbursed; to the Committee on Veterans' Affairs.

S. 3024. A bill to amend title 38 of the United States Code to require that veterans receiving hospital, nursing home, or outpatient medical care from the Veterans Administration for nonservice-connected disabilities be charged for such care to the extent that they have health insurance or similar contracts or rights with respect to such care, or have entitlement to private medical care under worker's compensation or automobile accident reparation statutes of any State, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. PELL (from the Committee on Rules and Administration):

S. 3025. An original bill to authorize appropriations for the Federal Election Commission for fiscal year 1979; placed on the calendar.

By Mr. WEICKER:

S. 3026. A bill to amend section 204(a) of the Public Works and Economic Development Act of 1965 in order to change the loan program under such section to a grant program; to the Committee on Environment and Public Works.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HELMS:

S. 3018. A bill to amend the Federal Food, Drug, and Cosmetic Act to provide that drugs will be regulated under the act solely to assure their safety, to promote pharmaceutical development and innovation, the efficient and fair treatment of new drug applications, the health of the American people, and for other purposes; to the Committee on Human Resources.

(The remarks of Mr. HELMS when he introduced the bill appear elsewhere in today's proceedings.)

By Mr. CRANSTON (by request):

S. 3021. A bill to amend title 38, United States Code, to provide readjustment professional counseling to Vietnam-era veterans and their families, and for other purposes; to the Committee on Veterans' Affairs.

● Mr. CRANSTON. Mr. President, I am introducing today, at the request of the administration, S. 3021, a bill to amend title 38, United States Code, to provide readjustment professional counseling to Vietnam-era veterans and their families, and for other purposes. I ask unanimous consent that the letter of transmittal, the bill, a section-by-section analysis of the bill, and changes in existing law which would be made by the bill be printed in the RECORD at this point.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 3021

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subchapter II of chapter 17 of title 38, United States Code, is amended by inserting after section 612 the following new section:

"§ 612A. Eligibility for readjustment professional counseling

"(a) The Administrator shall furnish readjustment professional counseling (including a general mental and psychological assessment in connection therewith) for any veteran who served on active duty in the Vietnam era who has readjustment problems and who, within a period of one year after the date of such veteran's discharge or release from service or one year after the date of enactment of this section, whichever is later, requests such assistance.

"(b) If on the basis of initial counseling furnished under subsection (a) of this section, it is determined by a physician employed by the Veterans' Administration that the provision of mental health services is necessary to facilitate the successful readjustment of the veteran, such veteran shall be furnished such services (including initial professional counseling services to such veteran's family or household members or legal guardian where essential to the effective treatment and rehabilitation of the veteran) on an outpatient basis under the conditions specified in clause (1)(B) of section 612(f) of this title. For the purposes of furnishing such mental health services, the counseling furnished under subsection (a) of this section shall be deemed to have been furnished as a part of hospital care. Any hospital care and other medical services deemed necessary on the basis of such initial counseling shall be furnished only in accordance with the eligibility critera otherwise set forth in this chapter (including section 611(b) thereof). With respect to a particular veteran who is not eligible for such necessary care or services, the Administrator shall provide referral services to assure, to the maximum extent practicable, that such care or services are provided from sources outside the Veterans' Administration.".

SEC. 2. The Table of Parts and Chapters at the beginning of title 38, United States Code, and the table of sections at the beginning of chapter 17 of such title are each amended by inserting after

"612. Eligibility for medical treatment." the following:

"612A. Eligibility for readjustment professional counseling.".

VETERANS ADMINISTRATION,
Washington, D.C., April 24, 1978.

Hon. WALTER MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a draft bill "To amend title 38, United States Code, to provide readjustment professional counseling to Vietnam-era veterans and their families, and for other purposes", with the request that it be introduced so that it may be considered for enactment.

The bill is an attempt to make VA health care resources available to Vietnam veterans having readjustment problems. It would authorize the establishment of a new program of readjustment professional counseling to assist Vietnam-era veterans who request such assistance either within one year after enactment of this bill, or within one year after discharge, which ever is later.

Testimony by psychiatrists, psychologists, social workers, and counselors, both at recent Congressional hearings and as far back as 1969, brought out that many Vietnam veterans have suffered significantly as a result of society's general indifference to the sacrifices they made during their periods of military service. Large numbers of returning Vietnam veterans have experienced guilt, bewilderment, alienation, pessimism, tension, restlessness, and other symptoms of low-grade readjustment problems. These problems may result in unemployment, family, and other interpersonal relations difficulties, alcohol or drug dependence, arrest records, and other forms of social and economic stress. The experience of our mental health professionals indicates that many veterans with readjustment problems do not generally present themselves to the VA for evaluation or treatment for several years after their discharge. This reluctance to seek readjustment assistance is likely due to an unwillingness to admit that one cannot necessarily solve one's own problems, taken together with doubts both as to whether VA can be of help, and as to one's eligibility for treatment by VA.

Accordingly, the draft bill is an attempt to reach "readjustment problems", by which is meant problems not usually amounting to a definable mental illness, or mental health problems requiring extended professional services. Rather, readjustment problems, as used in the draft bill, are those involving low-grade motivational or behavioral impairment which interferes with a veteran's job, educational performance, interpersonal relationships, or overall ability to cope reasonably with daily life. Basically, the draft bill is intended to assist Vietnam-era veterans to make or try to smooth the transition from military to civilian life, and to help the veteran to become a productive member of society without necessarily resulting in the creation of a stigmatizing mental health unit record. The bill contemplates that Vietnam-era veterans will have readjustment counseling services readily available and accessible on an outpatient basis, quickly, and without any prior hospitalization requirement.

The draft bill is thus intended to fill the present gap between the provision for a relatively short, "across-the-(VA)-board" personal interview by contact personnel pursuant to the Veterans Outreach Services Program, called for in section 241 of title 38, United States Code, and the type of detailed in-depth interview and assessment generally associated with evaluating, treating, and counseling a veteran presenting himself to a VA mental health unit with symptoms and possible resulting diagnosis of mental illness.

Noteworthy in this connection is that there would be no initial record of mental illness made concerning a veteran under the draft bill, who could be professionally counseled successfully without the need to refer such veteran to a VA mental health unit. It is anticipated that very few veterans who would receive readjustment counseling under this bill would require hospitalization for their readjustment problem.

It is also noteworthy that the bill authorizes the furnishing of initial professional counseling services to such veterans family on an outpatient basis, where essential to the effective treatment and rehabilitation of the veteran, as determined by a VA physician.

It is estimated that enactment of this draft bill would result in a cost of approximately $9.9 million for each of the first two fiscal years, and $6.6 million for each of the following three fiscal years.

We were advised by the Office of Management and Budget that there is no objection to the submission of this draft legislation to the Congress and that its enactment would be in accord with the program of the President.

Sincerely,

MAX CLELAND,
Administrator.

SECTION-BY-SECTION ANALYSIS OF DRAFT BILL

"To amend title 38, United States Code, to provide readjustment professional counseling to Vietnam-era veterans and their families, and for other purposes."

SECTION 1

The draft bill adds a new section 612A to subchapter II of chapter 17 which would establish a program of readjustment professional counseling for veterans who served on active duty in the Vietnam era, defined in section 101(29) as the period beginning August 5, 1964, and ending on May 7, 1975.

Subsection (a) would require the Administrator to furnish initial readjustment pro-

fessional counseling (including needed related assessments) to any veteran who requests such readjustment assistance for a readjustment problem within a period of one year after such veteran's discharge or release from service or within one year after enactment of this section, whichever is later.

Subsection (b) provides that if, on the basis of initial counseling, it is determined by a VA physician that mental health services are necessary to facilitate the successful readjustment of the veteran, such mental health services may be furnished the veteran on an outpatient basis (including discretionary initial professional counseling for members of the veteran's family where essential to the effective treatment and rehabilitation of the veteran) provided the veteran has met all eligibility requirements for post-hospital care under section 612(f)(1),(B), except that the initial counseling is deemed to satisfy the requirement of prior hospitalization. That exception does not broaden eligibility for hospitalization. Veterans who, on the basis of the initial counseling, are determined to be in need of hospital care or medical services, other than mental health services for a readjustment problem, would be eligible therefor only if otherwise meeting chapter 17 eligibility requirements. If the veteran is not eligible for such care and services, the Administrator would provide referral services to assure, to the maximum extent practicable, that the veteran receives such care from sources outside the VA.

SECTION 2

Amends both the Table of Parts and Chapters at the beginning of title 38, and the table of sections at the beginning of chapter 17 to reflect the addition of the new section 612A.

Noteworthy in this connection is that there would be no initial record of mental illness made concerning a veteran under the draft bill, who could be professionally counseled successfully without the need to refer such veteran to a VA mental health unit. It is anticipated that very few veterans who would receive readjustment counseling under this bill would require hospitalization for their readjustment problems. While the bill provides that, for purposes of furnishing mental health services, a veterans' episode of initial counseling is deemed to satisfy a requirement of prior hospitalization, the bill does not have the effect of broadening eligibility for VA hospitalization. To the contrary, the draft bill specifically provides that veterans who, on the basis of initial counseling, are deemed to need hospital care or medical intervention, other than mental health services, must meet general eligibility requirements.

Changes in existing law made by the draft bill are shown as follows (existing law proposed to be omitted is enclosed in black brackets, new matter is in italic, and existing law in which no change is proposed is shown in roman):

TITLE 38—UNITED STATES CODE

* * * * *

PART II—GENERAL BENEFITS

* * * * *

CHAPTER 17—Hospital, nursing home, domiciliary, and medical care

* * * * *

SUBCHAPTER II—Hospital, nursing home or domiciliary care and medical treatment

610. Eligibility for hospital, nursing home and domiciliary care.
611. Care during examinations and in emergencies.
612. Eligibility for medical treatment.
613. Medical care for survivors and dependents of certain veterans.
614. Fitting and training in use of prosthetic appliances; Seeing-eye dogs.
615. Tobacco for hospitalized veterans.
616. Hospital care by other agencies of the United States.
617. Invalid lifts and other devices.
618. Therapeutic and rehabilitative activities.
619. Repair or replacement of certain prosthetic and other appliances.
620. Transfers for nursing home care.

* * * * *

SUBCHAPTER II—Hospital, nursing home or domiciliary care and medical treatment

* * * * *

612. Eligibility for medical treatment

* * * * *

612A. Eligibility for readjustment professional counseling

(a) The Administrator shall furnish readjustment professional counseling (including a general mental and psychological assessment in connection therewith) for any veterans who served on active duty in the Vietnam era who has readjustment problems and who, within a period of one year after the date of such veteran's discharge or release from service or one year after the date of enactment of this section, whichever is later, requests such assistance.

(b) If on the basis of initial counseling furnished under subsection (a) of this section, it is determined by a physician employed by the Veterans' Administration that the provision of mental health services is necessary to facilitate the successful readjustment of the veteran, such veteran shall be furnished such services (including initial professional counseling services to such veteran's family or household members or legal guardian where essential to the effective treatment and rehabilitation of the veteran) on an outpatient basis under the conditions specified in clause (1)(B) of section 612(f) of this title. For the purposes of furnishing such mental health services, the counseling furnished under subsection (a) of this section shall be deemed to have been furnished as a part of hospital care. Any hospital care and other medical services deemed necessary on the basis of such initial counseling shall be furnished only in accordance with the eligibility criteria otherwise set forth in this chapter (including section 611(b) thereof). With respect to a particular veteran who is not eligible for such necessary care or services, the Administrator shall provide referral services to assure, to the maximum extent practicable, that such care or services are provided from sources outside the Veterans' Administration.●

By Mr. CRANSTON (by request):

S. 3022. A bill to amend title 38, United States Code, in order to extend the authority of the Administrator to make grants and carry out a pilot program for the exchange of medical information between Veterans' Administration facilities and the medical community, and for other purposes; to the Committee on Veterans' Affairs.

● Mr. CRANSTON. Mr. President, I am introducing today, at the request of the administration, S. 3022, a bill to amend title 38, United States Code, in order to extend the authority of the Administrator to make grants and carry out a pilot program for the exchange of medical information between Veterans' Administration facilities and the medical community, and for other purposes. I ask unanimous consent that the letter of transmittal, the bill, a section-by-section analysis of the bill, and changes in existing law which would be made by the bill be printed in the RECORD at this point.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 3022

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5055(c)(1) of title 38, United States Code, is amended by—

(1) striking out "$3,500,000 for fiscal year 1976; $1,700,000 for the period beginning July 1, 1976, and ending September 30, 1976; $4,000,000 for fiscal year 1977;";

(2) striking out "and" after the semicolon following "1978"; and

(3) inserting a semicolon and the following before the comma after "1979": and such sums as may be necessary for fiscal years 1980 through 1983".

VETERANS ADMINISTRATION,
Washington, D.C., April 25, 1978.

Hon. WALTER MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a draft bill "To amend title 38, United States Code, in order to extend the authority of the Administrator to make grants and carry out a pilot program for the exchange of medical information between Veterans Administration facilities and the medical community, and for other purposes," with the request that it be introduced in order that it be considered for enactment.

The original authority to conduct a pilot program for exchange of medical information was granted by enactment of Public Law 89–785 in November 1966. The program was originally funded in fiscal year 1968 with an appropriation of $942,000. Appropriations have been regularly increased as the program expanded. Section 5055(c)(1) of title 38 contains appropriation authorizations of $4,000,000 each year for fiscal years 1978 and 1979. The draft bill authorizes appropriation of such sums as may be necessary for each of the fiscal years, 1980 through 1983.

The pilot projects now being conducted under this authority often involve advanced medical and communications technology. Through the use of satellites, closed circuit television networks, videotape and other modern means of communication the expertise of the most sophisticated major medical centers may be brought to remote locations. These projects have helped attract and retain highly trained and qualified members of the medical profession at the participating hospitals.

To date 51 separate projects have been funded by the VA through grants to medical schools, hospitals, and research centers, as well as by direct funding to VA hospitals. The funds appropriated for these projects have been fully expended and well invested in pilot programs which, once established, rapidly make contributions to improved patient care. All VA hospitals are involved in the Exchange of Medical Information program, either as "core" hospitals from which information flows to outlying hospitals or as recipients of information.

Because the draft bill authorizes an appropriation of such sums as may be necessary to carry out the purpose of this program, the actual cost for any fiscal year would de-

pend on the amount of funds appropriated for the program by Congress.

We were advised by the Office of Management and Budget that there is no objection to the submission of this draft legislation to the Congress from the standpoint of the Administration's program.

Sincerely,

MAX CLELAND,
Administrator.

SECTION-BY-SECTION ANALYSIS OF DRAFT BILL

A bill to amend title 38, United States Code, in order to extend the authority of the Administrator to make grants and carry out a pilot program for the exchange of medical information between Veterans Administration facilities and the medical community, and for other purposes.

The bill amends section 5055(c)(1) of title 38. It strikes out language in that section which authorized appropriations in fiscal years 1976 and 1977. New language is added to the section which will authorize an appropriation of such sums as may be necessary for each fiscal year from 1980 through 1983.

CHANGES IN EXISTING LAW MADE BY DRAFT BILL

Changes in existing law made by this bill are shown as follows (existing law proposed to be omitted is enclosed in brackets, new matter is printed in italic, existing law in which no change is proposed is shown in roman):

TITLE 38—UNITED STATES CODE

* * * * *

PART VI—ACQUISITION AND DISPOSITION OF PROPERTY

* * * * *

CHAPTER 81—Acquisition and Operation of Hospital and Domiciliary Facilities; Procurement and Supply

* * * * *

SUBCHAPTER IV—SHARING OF MEDICAL FACILITIES, EQUIPMENT, AND INFORMATION

* * * * *

§ 5055. Pilot programs; grants to medical schools

* * * * *

(c)(1) There is hereby authorized to be appropriated an amount not to exceed [$3,500,000 for fiscal year 1976; $1,700,000 for the period beginning July 1, 1976, and ending September 30, 1976; $4,000,000 for fiscal year 1977;] $4,000,000 for fiscal year 1978; [and] $4,000,000 for fiscal year 1979; *and such sums as may be necessary for fiscal years 1980 through 1983,* for the purpose of developing and carrying out medical information programs under this section on a pilot program basis and for the grants authority in subsection (b) of this section. Pilot programs authorized by this subsection shall be carried out at Veterans' Administration hospitals in geographically dispersed areas of the United States.●

By Mr. CRANSTON (by request):

S. 3023. A bill to amend title 38, United States Code, to limit the circumstances under which the expenses of travel of certain veterans traveling to or from a Veterans' Administration facility in connection with the furnishing of medical care and treatment for nonservice-connected disabilities will be reimbursed; to the Committee on Veterans' Affairs.

● Mr. CRANSTON. Mr. President, I am introducing today, at the request of the administration, S. 3023, a bill to amend title 38, United States Code, to limit the circumstances under which the expenses of travel of certain veterans traveling to or from a Veterans' Administration facility in connection with the furnishing of medical care and treatment for nonservice-connected disabilities will be reimbursed. I ask unanimous consent that the letter of transmittal, the bill, a section-by-section analysis of the bill, and changes in existing law which would be made by the bill be printed in the RECORD at this point.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 3023

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 111(e)(2)(A) of title 38, United States Code, is amended to read as follows:

"(A) for or in connection with medical treatment (except with respect to a veteran receiving benefits for or in connection with a service-connected disability under this title) unless (i) special vehicular modes of transportation are required for medical reasons; and (ii) such travel has been authorized by the Administrator prior to such travel".

SEC. 2. Section 614(a) of title 38, United States Code, is amended by inserting "pursuant to the provisions of section 111 of this title" after "expenses."

SEC. 3. Section 628(a) of title 38, United States Code, is amended by inserting "pursuant to the provision of section 111 of this title" after "travel."

WASHINGTON, D.C.,
April 25, 1978.

Hon. WALTER MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a draft bill "To amend title 38, United States Code, to limit the circumstances under which the expenses of travel of certain veterans traveling to or from a Veterans Administration facility in connection with the furnishing of medical care and treatment for non-service-connected disabilities will be reimbursed", with the request that it be introduced in order that it might be considered for enactment. A complete section-by-section analysis is enclosed which explains the purpose of each of the amendments proposed to be made.

The current authority to provide hospital and medical care specifies that the beneficiary will be reimbursed for the necessary expenses of travel in connection with receiving medical care. Under certain circumstances, for non-service-connected conditions, eligibility for reimbursement is based on a statement on the application form (or supplemental form) that the beneficiary is unable to defray the expenses of travel.

It is proposed that title 38 be amended so that reimbursement for travel expenses incurred in connection with medical treatment for non-service-connected veterans would be authorized only when special vehicular modes of transportation are required for medical reasons and conditioned upon prior authorization by the Veterans Administration. These modes of transportation would include ambulance service, air ambulance service, hired car, and transportation where it is necessary for the beneficiary to be accompanied by an attendant.

The draft bill would not affect current authority to provide reimbursement for travel expenses in connection with examination or treatment for service-connected conditions, treatment necessary to permit a veteran to continue a VA program of vocational rehabilitation, or examinations authorized or ordered by the VA in connection with claims for compensation, pension, or other benefits.

It is our firm conviction that the medical care resources now utilized to pay reimbursement for travel expenses in connection with treatment for non-service-connected conditions, as well as the administrative cost in making these payments, could be more effectively utilized to improve the services provided veterans in need of medical care, particularly to top priority veterans seeking treatment for service-connected disabilities.

Enactment of this proposal would significantly reduce VA beneficiary travel costs. The total expenditures from the medical care appropriation for reimbursement of travel expenses during fiscal year 1979 are estimated to be $71,094,000. Based on a current study of beneficiary travel expenses, we estimate that this amount could be reduced by $42,656,400 for each of the succeeding fiscal years through adoption of this proposed legislation. We believe this would be entirely consistent with the President's objectives of improving health service available to the nation's veterans and adjusting domestic programs to promote effectiveness and economy in Government.

We were advised by the Office of Management and Budget that there is no objection to the submission of this draft legislation to the Congress and that its enactment would be in accord with the program of the President.

Sincerely,

MAX CLELAND,
Administrator.

SECTION-BY-SECTION ANALYSIS OF DRAFT BILL

The draft bill would amend title 38, United States Code, as follows: Section 1 would amend section 111(e)(2)(A), as amended by Public Law 94–581, section 101(2), to provide that, except with respect to a veteran receiving benefits for or in connection with a service-connected disability, no reimbursement for beneficiary travel will be made unless two conditions exist. First, a special vehicle must be required for medical reasons to transport the beneficiary; and second, the transportation by means of that special vehicular mode must have been authorized prior to the travel.

Section 2 would amend section 614(a) to provide that non-service-connected veterans who must travel in connection with the fitting and/or training in the use of a prosthetic appliance will be authorized reimbursement for such travel expense under the same conditions and circumstances as any other non-service-connected veteran. This proposed amendment will bring this section into conformity with the remainder of chapter 17 of title 38, United States Code.

Section 3 would amend section 628(a) to provide that a veteran who is entitled to reimbursement for treatment of a non-service-connected condition will be authorized reimbursement for such travel expenses incurred in connection with that treatment under the same conditions and circumstances as any other non-service-connected veteran. This proposed amendment will bring this section into conformity with the remainder of chapter 17 of title 38, United States Code.

CHANGES IN EXISTING LAW MADE BY THE DRAFT BILL

Changes in existing law made by the draft bill are shown as follows (existing law proposed to be omitted is enclosed in black brackets, new matter printed in italic, existing law in which no change is proposed is shown in roman):

TITLE 38—UNITED STATES CODE

* * * * *

PART I—GENERAL PROVISIONS

* * * * *

Chapter 1—GENERAL

* * * * *

§ 111. Travel expenses

* * * * *

(e)(1) In carrying out the purposes of this section, the Administrator, in consultation with the Administrator of General Services, the Secretary of Transportation, the Comptroller General of the United States, and representatives of organizations of veterans, shall conduct periodic investigations of the actual cost of travel (including lodging and subsistence) to beneficiaries while traveling to or from a Veterans' Administration facility or other place pursuant to the provisions of this section, and the estimated cost of alternative modes of travel, including public transportation and the operation of privately owned vehicles. The Administrator shall conduct such investigations immediately following any alteration in the rates described in paragraph (3)(C) of this subsection, and, in any event, immediately following the enactment of this subsection and not less often than annually thereafter, and based thereon, shall determine rates of allowances or reimbursements to be paid under this section.

(2) In no event shall payment be provided under this section—

(A) [unless the person claiming reimbursement has been determined, based on an annual declaration and certification by such person, to be unable to defray the expenses of such travel (except with respect to a veteran receiving benefits for or in connection with a service-connected disability under this title] *for or in connection with medical treatment (except with respect to a veteran receiving benefits for or in connection with a service-connected disability under this title) unless (i) special vehicular modes of transportation are required for medical reasons; and (ii) such travel has been authorized by the Administrator prior to such travel;*

By Mr. CRANSTON (by request):

S. 3024. A bill to amend title 38 of the United States Code to require that veterans receiving hospital, nursing home or outpatient medical care from the Veterans' Administration for nonservice-connected disabilities be charged for such care to the extent that they have health insurance or similar contracts or rights with respect to such care, or have entitlement to private medical care under worker's compensation or automobile accident reparation statutes of any State, and for other purposes; to the Committee on Veterans' Affairs.

● Mr. CRANSTON. Mr. President, I am introducing today, at the request of the administration, S. 3024, a bill to amend title 38 of the United States Code to require that veterans receiving hospital, nursing home or outpatient medical care from the Veterans' Administration for nonservice-connected disabilities be charged for such care to the extent that they have health insurance or similar contracts or rights with respect to such care, or have entitlement to private medical care under worker's compensation or automobile accident reparation statutes of any State, and for other purposes. I ask unanimous consent that the letter of transmittal and the text of the bill be printed in the RECORD at this point.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 3024

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 610 of title 38, United States Code, is amended by adding at the end thereof new subsection (e) as follows:

"(e) A veteran furnished hospital or nursing home care for a nonservice-connected disability pursuant to subsection (a) of this section or outpatient medical care for a nonservice-connected disability pursuant to section 612 (b) (5), (f) (g) and (h) of this title—

"(1) who is entitled to care or reimbursement for the expenses of private care under an insurance policy or contract, medical or hospital service agreement, membership or subscription contract, or similar arrangement for the purpose of providing, paying for, or reimbursing expenses for health services; or

"(2) whose illness or injury is so related to his or her employment as to provide entitlement for payment of hospital, nursing home and medical care by the employer, insurance carrier, or other sources under workers' compensation, employers' liability, or where entitlement to health care in a private facility is provided under automobile accident reparations acts, or similar law of any State,

shall be charged for such care to the extent of such entitlement. No such contract, or arrangement established under the above-described circumstances which is entered into, renewed, changed, or amended, after the effective date of this subsection, shall exclude from coverage the charges for hospital, nursing home and outpatient care furnished pursuant to subsection (a) of this section and sections 611 (b) and 612 (b) (5), (f) (g) and (h) of this title if such care would be covered thereunder when furnished by private facilities. Where such contract or arrangement provides for payment of less than the total charge for care and the insured veteran is entitled to care without charge under this chapter, the veteran shall be deemed to have paid that part of the charge not payable thereunder."

SEC. 2. This Act shall take effect on the first day of the first months which begins 90 days after the date of enactment.

WASHINGTON, D.C.,
April 20, 1978.

Hon. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a draft bill "To amend title 38 of the United States Code to require that veterans receiving hospital, nursing home or outpatient medical care from the Veterans Administration for nonservice-connected disabilities be charged for such care to the extent that they have health insurance or similar contracts or rights with respect to such care, or have entitlement to private medical care under workers' compensation or automobile accident reparation statutes of any State, and for other purposes," with the request that it be introduced in order that it may be considered for enactment.

The draft bill, if enacted, would require that veterans with nonservice-connected injuries or disabilities be charged for outpatient or inpatient medical, hospital or nursing home care in a Veterans Administration facility to the extent that they are entitled to care, or reimbursement for the cost of care, under a health insurance policy or contract, or health insurance provided by law or through employment. ("Health Insurance" does not include either the Medicare or Medicaid program.) It would also prohibit, prospectively, the exclusion of the costs of Veterans Administration hospitalization or nursing home care for treatment of nonservice-connected injuries or disabilities from coverage under such policies of contracts, if such care would be covered when furnished by private facilities. The bill would be effective the first day of the first month which begins 90 days after the date of enactment. The deferred date would give affected insurance companies time to redraft future contracts in conformity with the new law. The suggested legislation would enable the United States to collect its costs, where appropriate. The best interest of the public would, thus, be served by the enactment of this legislation.

The health insurance portion of this bill was originally submitted to the 91st Congress on February 26, 1970, as part of the Federal Economy Act of 1970. Following resubmission to the 92d Congress, by letters of January 26, 1971, it was introduced as S. 2807, 92d Congress. The bill was resubmitted to the 93d Congress, by letters of March 14, 1973, and introduced as H.R. 5936, 93d Congress. Our draft submission to the 94th Congress was designated H.R. 4009 and S. 816. The workers' compensation portion of this bill was submitted as an amendment to H.R. 4009 by letter of July 23, 1975. By letters dated January 19, 1977, our draft submission of the previous bill was submitted to the 95th Congress, but it has not as yet been introduced. The draft bill submitted herewith adds an automobile accident reparation act portion.

This legislation is considered to be within the medical care cost containment concept of the President.

Under existing law, a veteran who is under age 65, is eligible for necessary hospital care for a nonservice-connected disability if he or she is unable to defray the expenses of private hospital care. (Veterans who are age 65 or older are entitled to such care without regard to their ability to bear the cost of private care.) We cannot administratively deny hospital admission to veterans who file the required statement of inability to pay, even though they may be entitled to medical care and treatment, or to reimbursement for all or part of the cost thereof, from a third party. (38 U.S.C. § 622).

The Veterans Administration has statutory authority for the recovery of hospital costs from tortiously liable third parties as provided by the enactment of the Federal Medical Care Recovery Act (Public Law 87–693) in 1962. This act has been interpreted as reflecting the congressional intent that the United States is entitled to reimbursement for medical care rendered veterans who can afford to pay for medical care and treatment of nonservice-connected injuries and diseases in the same manner as if the medical care were provided from private sources.

Although the Veterans Administration has carried out a cost-effective effort to collect its medical care costs where a private provider would be paid, this effort has resulted in extensive and expensive litigation and demonstrated that further legislation is necessary. One practice that can only be corrected by legislation is that of the insurance community writing its contracts in such a fashion that private health care providers will be paid, but the Federal Government health care providers are excluded from payment. Another practice that causes time consuming and extensive litigation is the occasional practice of State legislatures passing statutes that are worded in such a fashion as to provide payment to private health care providers but exclude payment to Federal health care providers.

In this regard, the Veterans Administration adheres to its longstanding position that the United States should not bear the cost of hospital, nursing home or outpatient medical care of veterans for nonservice-connected disabilities where to do so would provide a windfall in the nature of a Federal subsidy for third parties, such as insurance companies.

It appears to be only appropriate to place the burden on the insurance companies to pay the cost of medical treatment their insured receives regardless of the source. To do otherwise enables the insurer to unilaterally reduce its coverage without affecting the premium charge. If the insurance company expressly excludes the Veterans Administration as a claimant, it should then work a *pro tanto* reduction of the premium paid by a veteran eligible for Veterans Administration medical care *vis a vis* other insurance applicants. To allow an insurer to eliminate from its obligation under an exclusion provision any expenses incurred by the Veterans Administration under its statutory obligation to the insured, would mean that the insurer would have been carrying limited or no liability under its part of the policy while charging the veteran-insured the full premium charged an insured who had no equivalent Federal coverage.

The question of the entitlement of the Veterans Administration to recover its costs as health care provider in treating veterans injured in industrial accidents has been the subject of extensive litigation in Texas. Adverse decisions in Texas, used by insurance companies in that and other jurisdictions to deny VA Hospital costs in treating industrially injured veterans, have cost the VA many thousands of dollars. After more than seven years of litigation, the right of the Veterans Administration to recover its costs in this area has been resolved in two recent decisions by the Fifth Circuit Court of Appeals in favor of the United States. These decisions in favor of the United States are already under attack. While we consider the current decisions of the United States Court of Appeals, Fifth Circuit, as being correct, they are being appealed by the insurance carriers. Additional years of litigation on the subject matter are expected and will not be in the best interest of the United States.

The State of Alabama has passed a statute in connection with their workers' compensation concept which is not subject to the Fifth Circuit decisions mentioned above.

The provisions of Alabama law with which we are concerned, Title 25, Chapter 5 section 25–5–77, Code of Alabama 1975, attempt to limit the employer's liability for medical, surgical, and hospital service in the following manner:

"In case an insurer of the employee or a benefit association is liable for such medical, surgical and hospital service or for a part thereof or in case the employee is entitled to the same or a part thereof, from any source whatever by virtue of any agreement of understanding or law, state or federal, without any loss of benefit to the employee, the employer shall not be required in such case to pay any part of such expense, unless said benefits are insufficient to pay all such expense, and in such event the employer shall be liable for the deficiency only." (Emphasis added.)

In a recent claim for Veterans Administration hospital costs in Alabama, the employer and the employer's insurer used this provision as the basis for denying the Veterans Administration the right to claim its costs. The State court adopted the view of the employer and the insurer and denied the Veterans Administration claim. This case is being appealed as being in conflict with VA statutes and regulations and, thus, unconstitutional, null, and void. It is our view the attached bill would make it clear that such State statutes are unconstitutional and, thus, save endless litigation and efforts to defeat our collection efforts by the use of State statutes proposing to exclude the Veterans Administration from recovery of their costs.

With regard to recoveries by the Veterans Administration for its expenses and costs of treating veterans injured industrially, it can be said that each time a veteran receives treatment at Federal expense for injuries sustained in work covered by State compensation laws, the Federal government sustains a financial loss. Since the United States receives no benefit when a veteran works for a private employer, the Federal government should not bear the burden of medical treatment for work-related injuries.

Since the Veterans Administration is not in a position to prevent private employment injuries, the burden of medical treatment should not be placed on the Veterans Administration.

Finally, the provision of free medical care for deserving veterans was made in consideration of the veteran's previous service to his country. It was not intended to relieve an employer or an employer's insurer of their statutory duty to provide medical treatment for an industrially injured employee.

The various State automobile accident reparations acts bear a close relationship to workers' compensation acts. Both generally provide that medical care be provided the injured party and that the medical care provider should be paid. It is the view of the Veterans Administration that, in the event the Veterans Administration provides medical care and treatment to veterans covered by such acts, the costs to the VA for such care should be paid to the same extent as payment is made to a private health care provider.

Some States have included provisions in their "no fault" statutes that prevent the Veterans Administration from collecting its costs in those States. As an example, we wish to point out Title 40, section 1009.206, Purdon's Pennsylvania Statutes Annotated, a portion of the Pennsylvania No-Fault Law, which reads, in part, as follows:

"Except as provided in section 108(a)(3) of this act, all benefits or advantages . . . that an individual receives or is entitled to receive from . . . workmen's compensation, any State-required temporary, nonoccupational disability insurance, *and all other benefits* (except the proceeds of life insurance) *received by or available to an individual because of the injury from any government*, unless the law authorizing or providing for such benefits or advantages makes them excess or secondary to the benefits in accordance with this act, shall be subtracted from loss in calculating net loss." (emphasis added)

It is our view that this provision of the statute is unconstitutional as being in violation of the Supremacy Clause of the Federal Constitution; however, on the basis of this statute, insurance carriers are routinely denying our claims for our costs in treating veterans for automobile accident related injuries.

The Veterans Administration, in most instances, is unable to collect its costs in States having legislation similiar to that reflected above. Litigation to overcome this bar to our collection effort on constitutional grounds is time consuming and expensive.

There exists a legal principle that, when one person confers a benefit on another without donative intent, the recipient of the benefit should be required to make restitution. Veterans Administration hospitals do not volunteer their services. The treatment given is obligated by law and given only under certain specified conditions. The Veterans Administration does not have a donative intent in treating a veteran's nonservice-connected industrial or automobile accident related injuries. To the contrary, since such veterans can afford to pay for their care when they have workers' compensation or automobile accident related injuries, where medical care is provided by State statute, they are not eligible for VA treatment without charge to the extent of coverage under workers' compensation or automobile accident insurance policies. VA regulation, 38 C.F.R. 17.48, clearly indicates that the medical treatment rendered under such circumstances is not with donative intent.

In its report to the Senate and House Committees on Veterans' Affairs, the National Academy of Sciences, National Research Council study of Health Care for American Veterans (Senate Committee Print No. 4, House Committee Print No. 36, 95th Congress, 1st Session dated June 7, 1977) included in its recommendations on page 279 the following:

". . . the VA should be reimbursed by third-party insurers, both private and governmental, wherever such coverage is available. This will require appropriate action by Congress."

In its response, the Veterans Administration, in Senate Committee Print No. 7, 95th Congress, 1st Session dated September 22, 1977, beginning on page 46, stated:

"The VA concurs with this recommendation. The VA agrees to reimbursement by third-party insurers and has proposed such legislation. . . ."

In the Report to Congress by the Comptroller General of the United States, titled "New Strategy Can Improve Process For Recovering Certain Medical Care Costs" dated September 13, 1977, pertaining to the Department of Defense, the Comptroller notes with approval the efforts of the VA to obtain legislation in this area. On page 24 it is stated:

". . . we believe that the Government should not be excluded from recovering the cost of medical care provided to insured

beneficiaries if recovery would have been available to civilian hospitals. We believe that VA's attempts to establish a clear right of recovery in situations where certain veterans have applicable insurance is reasonable. . . ."

In Fiscal Year 1977, the Veterans Administration recovered approximately $2.8 million under workers' compensation and other similar statutes not based on negligence where treatment of veterans for nonservice-connected injuries or illnesses was provided by the Veterans Administration.

The projected cost savings to the Government with the enactment of this proposed legislation, as it pertains to recovery based on health care contracts, are estimated as follows, assuming an enactment date of October 1, 1978:

(Dollars in millions)

FY 1979	$84
FY 1980	218
FY 1981	227
FY 1982	227
FY 1983	227

We request that this bill be introduced and recommend its favorable consideration.

The Office of Management and Budget advised that there was no objection to the submission of this draft legislation to the Congress and that its enactment would be in accord with the program of the President.

Sincerely,

MAX CLELAND,
Administrator.●

By Mr. WEICKER:

S. 3026. A bill to amend section 204(a) of the Public Works and Economic Development Act of 1965 in order to change the loan program under such section to a grant program; to the Committee on Environment and Public Works.

REDEVELOPMENT AREA GRANT PROGRAM

● Mr. WEICKER, Mr. President, I am today introducing legislation to amend section 204(a) of the Public Works and Economic Development Act of 1965 in order to change the loan program to a grant program. This legislation has the support of the National Association of Counties, the National Association of Regional Councils, the National Association of Development Organizations, and the National Congress for Community Economic Development.

The program I am proposing to amend, section 204, the redevelopment area loan program, falls under the jurisdiction of the Economic Development Administration. EDA has, in the past 13 years, worked with very little money but with true dedication to encourage economic development in the United States. Up until a few years ago, EDA focused primarily on rural areas. However, in 1974, because of the recession, urban areas which suffered sustained high unemployment for a long period of time, because eligible for EDA assistance for public works facilities grants and qualified to become redevelopment areas. In addition, under the 1976 amendments to the Public Works and Economic Development Act of 1965, long-term economic deterioration became an eligible criterion for receiving EDA assistance. It was recognized at the time that some urban areas were experiencing economic dislocation and long-term economic deterioration. Both rural and urban areas were and still are facing job scarcity, reduction of tax base, outmigration of skilled workers, and the lack of public services to attract new business.

As was pointed out by the New York Times recently, EDA has a good track record. The agency has provided $412 million in loans and loan guarantees to 412 businesses in rural and urban areas and has created or saved 95,000 jobs at an average cost of $3,500 a job. A major element of EDA's programs has been to help distressed areas develop a relationship with business by providing incentives, such as low cost, long-term, fixed assets and working capital loans or loan guarantees, in hopes of creating job-producing industries in these distressed areas. EDA can also subsidize business loan interest and guarantee leases for buildings and/or equipment.

EDA has proven itself to be a responsible and effective Federal agency, which in the minds of many people is quite unusual. It is my firm belief that EDA programs have the potential to create and restore the jobs, dignity, diversity, and development needed in rural and urban areas. However, though EDA offers the mechanisms to provide our distressed areas with public facility grants, business development, economic planning, technical assistance, economic development research, mortgage assistance, and many other economic development tools which are very much needed; unfortunately, many of these programs are either underfunded or ignored.

Earlier this year, I sent a letter to the mayors of 100 of our largest cities requesting their evaluation of EDA and SBA programs. I was motivated to send these letters, because I am ranking minority member of the Senate Appropriations Subcommittee that funds these agencies and their programs. So far, I have received for 44 responses from my letter. While not suggesting that EDA programs are perfect, the mayors generally gave EDA programs high marks and expressed a genuine desire to continue their new and growing relationship with EDA for urban progress.

Again, my purpose in introducing this legislation is to change section 204, the redevelopment area loan program, from a Federal loan program to a Federal grant program, as it was originally intended. In its original form, section 204 would provide a $125 million Federal grant program for the establishment of local revolving loan funds. EDA would make grants in redevelopment areas to local governments or public local development corporations who would establish a revolving loan fund to provide low interest loans to private industry to advance economic development in the area. The interest received from the loans returning to the revolving loan programs could then be used for future loans.

During consideration of the 1976 amendments to the Public Works and Economic Development Act of 1965, Congressman ROBERT ROE of New Jersey, introduced an initiative very much like the one I am introducing today. Unfortunately, when the legislation went to conference, the conferees changed the Roe initiative to a Federal loan program. EDA spent months trying to write regulations for the program but ran into all sorts of obstacles, such as:

First. Many cities and counties under their State constitutions may not borrow money.

Second. Many cities and counties cannot legally loan money to private businesses.

Third. How is repayment of the loan handled in the case of a redevelopment area dedesignation?

Fourth. Who is responsible for repayment of the loan? Could a local government or public local development corporation be held liable for the full amount of the loan in the case of default by private business?

Fifth. Fiscally pressed cities which may be dangerously close to their debt limit or have a poor credit rating would not be able to add more loan obligations.

Because of these difficulties in administering this section, the administration has proposed to reprogram the small amount appropriated for section 204 for fiscal year 1978 ($15 million) into title IX which among several other eligible activities has experimented with local revolving loan funds.

However, section 204 as a Federal grant program would solve almost all of these problems, and would offer a viable economic tool for leveraging private business investments to create and retain permanent jobs and stabilize local tax revenue bases.

Currently, EDA has granted funds for four local revolving loan funds (LRLF) out of its title IX program. LRLF's have been recently established in Gary, Ind.; Philadelphia, Pa.; Baltimore, Md.; and Del Norte County, Calif. However, only the latter two areas have activated their LRLF.

Del Norte County, Calif., is located in the northwest most section of the State. The major city is Crescent City, where the local economic development corporation which handles the LRLF is situated. Del Norte County is basically a rural area with forest and farmland. The population of the county is 15,500.

The area has been suffering long-term deterioration and recently underwent economic dislocation, because of restrictions placed on harvesting timber. A majority of the workers in the county are unskilled and the unemployment rate is 17 percent. The major industries are timber, lumber, fishing, and agriculture.

Del Norte County was given an initial EDA grant of $2,695,000 of which $1.5 million went into a revolving loan fund. So far, the county has made four long-term loans at 8½ percent interest to: The Sanitation and Garbage Removal Co., a concrete plant, a restaurant, and the Ornamental Plant Growers, Smith River. Approximately 100 jobs have been saved because of the revolving loan projects, and 60 new jobs have been created. The remaining $804,000 in the revolving loan fund will be leveraged with Small Business Administration funds to assist small businesses in the county.

Baltimore, Md., has received an initial EDA grant of $10.5 million of which a proportion was set aside for a local revolving loan fund. The city's overall goal is to improve and revitalize its commer-

cial neighborhood areas. The project is called the port industrial improvement project.

The federally funded revolving loan fund has supplemented the city's own local economic development plans. Specifically, the citywide plans are very selective in targeting money to commercial and neighborhood projects, resulting in the neglect of other depressed areas of the city. The revolving loan fund has given the city the leverage it needed to involve more of the depressed areas in its overall economic development. Five-hundred thousand dollars was loaned for a shopping center project to revitalize a commercial strip in southeast Baltimore which contains a vacant department store. Some of the remaining funds have been loaned for public works improvements, such as street reconstruction and sewers. The city also plans to use the remaining money for loans for industrial improvements, such as renovating factories and business storefronts.

The port industrial improvement project was approved in July of 1976 and has been estimated for completion in late 1978 or early 1979. One-half of the projects are now under construction, some have already been finished, and the remaining are ready for construction.

There has been concern that few areas of the country have the local capacity to operate a local revolving loan fund. However, after checking with many of the organizations which specialize in economic development, I found that there were quite a few areas of the country that need and have the local capacity for a LRLF. Such cities as Milwaukee, Dayton, Chicago, Columbus, Ohio; Portland, Oreg.; Detroit, Hartford, and Boston have developed the tools and expertise needed to administer a LRLF. Counties, such as Los Angeles County and Dade County, along with economic development districts, such as the Northwest Arkansas Economic Development District of Harrison, Ark.; the Neuse River Council of Government, New Bern, N.C.; the Arrowhead Regional Development Corporation, Duluth, Minn.; the Mohawk Valley Economic Development District, Mohawk, N.Y.; the Lower Rio Grande Valley Development Council, McAllen, Tex.; and Central Savannah River Area Planning and Development Commission, Augusta, Ga., also have the need and local capacity to utilize a LRLF.

The Federal Government ought to strive for greater flexibility in these programs. It is becoming clear that local governments are developing the capacity to propose sound priorities regarding local economic growth and the knowledge to take the appropriate actions to implement them. Many Federal grant programs require too much redtape and allow only certain activities to be funded so that areas end up with projects they did not really want but knew they would not get Federal funding if they did not comply with the program's eligible activities. Section 204 provides that a redevelopment area must submit an areawide economic development plan outlining the areas' economic development goals and programs. However, at the same time, section 204 is very flexible, allowing for many different kinds of eligible activities, in many different forms.

The number of local public civil servants in the United States has doubled since 1960 from 2,417,000 to 4,042,692 in 1976. There have been new advances on a local level to deal with economic development and mayors of towns and cities no longer see their role as only providing public services but also providing their constituents a sound economic base. There is an overwhelming desire by local officials to work with the private sector in providing this sound economic base. Many towns, counties, and cities have professional staffs who encourage and plan for the economic growth of their area.

The Federal Government must realize that many areas of the country are ready to go forth with their economic development plans and the Federal Government can no longer take a "go slowism" attitude. This country has some serious economic development problems and the Federal Government cannot be the impediment that stands in the way of well-thought out economic growth.

It should be noted that both EDA and the Department of Commerce requested a full $125 million funding for section 204 for fiscal year 1979 but that it was denied by the Office of Management and Budget. And while it is true that EDA has funded four local revolving loan fund programs from title IX, this is no guarantee that there will be a revolving loan program funded out of title IX in 1979 or that the program will be given the adequate funds needed to establish successful local revolving loan funds. In addition, the Public Works and Economic Development Act programs (PWEDA) must be reauthorized by 1979. I would like to see this unique concept retain its visibility as a distinct and important program within PWEDA.

There is no guarantee that President Carter's urban policy proposals will be passed by Congress in the near future. In fact, the National Development Bank proposal has already run aground in the Senate Budget Committee. To insure a high priority for rural and urban economic development during the next 18 months, it is important that section 204 be enacted as a grant program. And as a companion program to section 204, section 202, the business loan and loan guarantee program should be funded at a significantly higher level than presently requested by EDA.

Taken together with EDA's section 202 program for the private sector, section 204 permits a city to package business loans and loan guarantees with industrial land assembly, land banking, acquisition of industrial sites, including acquisition of abandoned properties with redevelopment potential, real estate development, including redevelopment and rehabilitation of historical buildings for industrial and commercial use, rehabilitation and renovation of usable empty factory buildings for industrial and commercial use and many other activities. I believe my proposals are in line with EDA's goals of packaging and linking the many programs and tools it has to offer a distressed area.

I ask for unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3026

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 204(a) (including the title of such section) of the Public Works and Economic Development Act of 1965 (42 U.S.C. 3144(a)) is amended to read as follows:

"REDEVELOPMENT AREA GRANT PROGRAM

"SEC. 204. (a) If a redevelopment area prepares a plan for the redevelopment of the area or a part thereof and submits such plan to the Secretary for his approval and the Secretary approves such plan, the Secretary is authorized to make a grant to such area for the purpose of carrying out such plan. Such plan may include industrial land assembly, land banking, acquisition of surplus government property, acquisition of industrial sites including acquisition of abandoned properties with redevelopment potential, real estate development including redevelopment and rehabilitation of historical buildings for industrial and commercial use, rehabilitation and renovation of usable empty factory buildings for industrial and commercial use, and other investments which will accelerate recycling of land and facilities for job creating economic activity. Any such grant shall be made on condition (1) that the area will use such grant to make loans to carry out such plan, (2) the repayment of any loans made by the area from such grant shall be placed by such area in a revolving fund available solely for the making of other loans by the area, upon approval by the Secretary, for the economic redevelopment of the area. This section shall not apply to any redevelopment area whose designation as a redevelopment area would be terminated or modified under section 402 of this Act except for the provisions of section 2 of the Act entitled 'An Act to amend the Public Works and Economic Development Act of 1965 to extend the authorizations for titles I through IV through fiscal year 1971', approved July 6, 1970 (P.L. 91-304).".

ADDITIONAL COSPONSORS

S. 1382

At the request of Mr. THURMOND, the Senator from Pennsylvania (Mr. SCHWEIKER) was added as a cosponsor of S. 1382, a bill to establish rational criteria for the imposition of the sentence of death, and for other purposes.

S. 1766

At the request of Mr. RIBICOFF, the Senator from Wyoming (Mr. WALLOP) was added as a cosponsor of S. 1766, the Federal Computer Systems Protection Act.

S. 2384

At the request of Mr. CRANSTON, the Senator from Montana (Mr. PAUL G. HATFIELD) and the Senator from Massachusetts (Mr. BROOKE) were added as cosponsors of S. 2384, the Veterans' and Survivors Income Security Act.

S. 2416

At the request of Mr. JAVITS, the Senator from Massachusetts (Mr. BROOKE) and the Senator from Kansas (Mr. DOLE) were added as cosponsors of S. 2416, the Nurse Training Amendments of 1978.

S. 2614

At the request of Mr. HELMS, the Senator from Utah (Mr. GARN) was added as

a cosponsor of S. 1614, a bill to amend the Public Health Service Act to provide alternatives to abortion.

S. 2691

At the request of Mr. WILLIAMS, the Senator from Louisiana (Mr. JOHNSTON), the Senator from Colorado (Mr. HASKELL), the Senator from Massachusetts (Mr. KENNEDY), and the Senator from Arkansas (Mr. BUMPERS) were added as cosponsors of S. 2691, a bill to provide for the furnishing of congregate housing services under the U.S. Housing Act of 1937.

S. 2699

At the request of Mr. MAGNUSON, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 2699, a bill authorizing the preservation of historical and archeological data.

S. 2799

At the request of Mr. BROOKE, the Senator from New York (Mr. JAVITS) was added as a cosponsor of S. 2799, the Public Housing Security Demonstration Act of 1978.

S. 2800

At the request of Mr. BROOKE, the Senator from New York (Mr. JAVITS) and the Senator from New York (Mr. MOYNIHAN) were added as cosponsors of S. 2800, the Housing Act of 1978.

S. 2867

At the request of Mr. GOLDWATER, the Senator from Wyoming (Mr. WALLOP) was added as a cosponsor of S. 2867, a bill to remove residency requirements and acreage limitations applicable to land subject to reclamation law.

S. 2856

At the request of Mr. MORGAN, the Senator from Arizona (Mr. GOLDWATER) was added as a cosponsor of S. 2856, a bill to amend the survivor benefit plan provided for under chapter 73 of title 10, United States Code, to permit members and former members of the uniformed services who have completed the number of years of service required for eligibility for retired pay under chapter 67 of such title but who have not, because of age, become entitled to retired pay to participate in such plan, to make the dependents of such members and former members who died before becoming entitled to such retired pay eligible for certain medical and dental benefits under chapter 55 of such title, and for other purposes.

S. 2879

At the request of Mr. JAVITS, the Senator from Arizona (Mr. DECONCINI) was added as a cosponsor of S. 2879, the Primary Health Care Act of 1978.

S. 2910

At the request of Mr. KENNEDY, the Senator from Minnesota (Mrs. HUMPHREY) was added as a cosponsor of S. 2910, a bill to establish a program for developing networks of community-based services to prevent initial and repeat pregnancies among adolescents, to provide care for pregnant adolescents, and to help adolescents become productive independent contributors to family and community life.

SENATE JOINT RESOLUTION 132

At the request of Mr. ANDERSON, the Senator from New Jersey (Mr. WILLIAMS) and the Senator from Montana (Mr. MELCHER) were added as cosponsors of Senate Joint Resolution 132, to establish a Presidential Commission to develop plans for a memorial to the victims of the Holocaust.

SENATE RESOLUTION 114

At the request of Mr. ANDERSON, the Senator from New Jersey (Mr. WILLIAMS) was added as a cosponsor of Senate Resolution 114, relating to a study of telecommunications policy.

AMENDMENT NO. 1752

At the request of Mr. BROOKE, the Senator from New Jersey (Mr. WILLIAMS) was added as a cosponsor of amendment No. 1752 intended to be proposed to S. 2637, the Housing and Community Development Amendments of 1978.

SENATE RESOLUTION 444—SUBMISSION OF A RESOLUTION TO DISAPPROVE CERTAIN ACTION OF THE COMMISSIONER OF EDUCATION

Mr. WILLIAMS (for himself and Mr. JAVITS) submitted the following resolution, which was referred to the Committee on Human Resources:

S. RES. 444

Resolved, That the Senate objects to the action of the Commissioner of Education in consolidating certain advisory councils as proposed in the Commissioner's annual report submitted, pursuant to section 448 of the General Education Provisions Act, on February 28, 1978.

Mr. WILLIAMS. Mr. President, I am submitting today a resolution to disapprove the action of the Commissioner of Education in consolidating certain advisory councils as proposed under section 448 of the General Education Provisions Act.

I am joined in the introduction of this measure by Senator JACOB K. JAVITS, the ranking minority member of the Committee on Human Resources.

The reason that we introduced this resolution is that the proposals made by the Commissioner of Education to combine, consolidate, and reorganize five education advisory bodies comes precisely at the time the authorizing legislation affecting such bodies is pending before the Congress.

The Elementary and Secondary Education Act, now pending in the Committee on Human Resources, is expected to be reported to the Senate by May 15, 1978. Many provisions of that bill, the omnibus Federal education support measure, deal with the very advisory groups which are the subject of the Commissioner's proposal. Those proposed changes, if permitted to become effective, would take place by May 28, 1978. Without any prejudice to the merits of the Commissioner's proposals, the reorganization would take place in a most inappropriate time as the Congress considers these advisory groups within the entire context of Federal education policy.

A companion resolution has been introduced in the House of Representatives by the leadership of the Committee on Education and Labor.

AMENDMENTS SUBMITTED FOR PRINTING

HOUSING AND COMMUNITY DEVELOPMENT AMENDMENTS OF 1978—S. 2637

AMENDMENT NO. 1837

(Ordered to be printed and referred to the Committee on Banking, Housing, and Urban Affairs.)

Mr. SCHMITT submitted an amendment intended to be proposed by him to the bill (S. 2637) to amend and extend certain Federal laws relating to housing, community and neighborhood development and preservation, and related programs, and for other purposes.

AMENDMENT NO. 1838

(Ordered to be printed and referred to the Committee on Banking, Housing, and Urban Affairs.)

Mr. KENNEDY (for himself and Mr. BROOKE) submitted an amendment intended to be proposed by them, jointly, to the bill (S. 2637), supra.

HUD DAY CARE CENTER FACILITIES

● Mr. KENNEDY. Mr. President, in 1976 the Members of the 94th Congress recognized the need for day care facilities for children of Federal employees by authorizing the establishment of a day care facility for the children of employees of the Department of Housing and Urban Development. Today, I am submitting what might be considered a technical amendment which would help HUD employees throughout the United States to take advantage of this legislation. My amendment, which is cosponsored by my colleague from Massachusetts, Mr. BROOKE, would authorize the Secretary of Housing and Urban Development to establish multiple day care facilities for HUD employees, as well as to permit the participation of HUD employees in interagency day care centers.

The need for such legislation is clear. In Boston, for example, numerous Federal employees have been actively building a foundation for an interagency child care program in the John Fitzgerald Kennedy Federal Building which houses the regional offices of many Federal departments and agencies. Studies leading up to the creation of the Government Center Child Care Corporation, composed of 11 persons from six different Federal agencies revealed that no comparable program exists which offers child care at the parent's work site, and that accessibility to the child during the work day is a priority among potential users of the day care center.

While the present administration has supported the concept of day care centers for HUD employees outside of headquarters in Washington and has proposed language in the Housing and Community Development Amendments of 1978 for that purpose. The amendment which I am proposing today would go even further by permitting HUD participation in the establishment of interagency day care centers in cooperation with other Federal agencies.

As is the case with the HUD Day Care Center in Washington, D.C., it is intended that the conversion, equipping

and maintenance of space in which the centers would operate would require the expenditure of some Federal funds, but the Center's program would be self-sustaining from fees charged to users. In addition, startup costs limited to 3 percent of the first year's operating budget or up to $3,500 could be authorized by the Secretary on a reimbursable basis.

Mr. President, I believe that adequate child care contributes to the welfare and morale of Federal employees. By authorizing the creation of such facilities in the regional offices of the Department of Housing and Urban Development, we will be taking a positive step to that end.●

● Mr. BROOKE. Mr. President, today I am submitting with my colleague from Massachusetts, Mr. KENNEDY, an amendment to S. 2637 which would correct an apparent oversight in the existing legislation authorizing a day care center for the children of employees of the Department of Housing and Urban Development.

The need for child care programs for Federal employees has been evident for many years. And it was for the purpose of addressing this need that I first introduced an amendment to the Housing Authorization Act of 1976 to clarify the authority of the Secretary to establish a day care center for HUD employees. In furtherance of that legislation, a day care center has been established at HUD headquarters in Washington, D.C.

The amendment which is being offered today would not only permit the establishment of day care centers for HUD employees outside of Washington, D.C., it would also authorize HUD to participate in the establishment of interagency day care facilities, such as the child care center for Government employees in Boston, Mass.

For the past 5 years at least, various groups of Government employees have been meeting to organize a child care center in the Government Center area of downtown Boston, where approximately 12,000 Federal employees work. But it was only as a result of concentrated efforts over the past year by interested employees that several Federal agencies have recognized the merit of such an idea. Through the Women's Opportunity Committee and the Policy Committee of the Boston Federal Executive Board, these agencies have been cooperating in the planning of a day care facility in the John Fitzgerald Kennedy Federal Building, where approximately 4,000 Federal employees work. Because of the small regional staffs of the agencies located in Boston and elsewhere, interagency cooperation and support may be called for in order to make a day care facility feasible. It is equally clear that no comparable program exists which offers child care at the worksite: and that accessibility to the child during the workday is a priority among the potential users of such centers.

The amendment proposed today does not alter the self-supporting nature of the HUD day care centers, which will be operated from the proceeds of fees charged to parents. However, the Secretary would also be authorized to provide on a reimbursable basis up to 3 percent of the first year's operating budget up to a maximum of $3,500 for costs associated with the start-up of the day care facility in addition to providing the space and initial equipment on a reimbursable basis as presently authorized.

Mr. President, I believe that the benefits of legislation authorizing a HUD day care center should be made available on an equitable basis where sufficient interest is shown at HUD regional, field, and area offices. I therefore urge your support in the adoption of this amendment.●

DOMESTIC VOLUNTEER SERVICE—S. 2823

AMENDMENT NO. 1839

(Ordered to be printed and referred to the Committee on Human Resources.)

Mr. CRANSTON (by request) submitted an amendment intended to be proposed by him to the bill (S. 2823) to amend the Domestic Volunteer Service Act of 1973, and for other purposes.

● Mr. CRANSTON. Mr. President, today I am submitting, at the request of the administration, an amendment to S. 2823, a bill to amend the Domestic Volunteer Service Act of 1973, and for other purposes, which I introduced at the request of the administration on April 4, 1978.

Tomorrow, the full Human Resources Committee will be marking up S. 2617, the proposed "Domestic Volunteer Service Act Amendments of 1978." At that time, Senator JAVITS and I will be introducing much of the administration's basic proposal as set forth in this amendment as part of our own proposals for "urban neighborhood volunteer programs."

I ask unanimous consent that the letter of transmittal of April 13, 1978, from Sam Brown, Director of the ACTION Agency, the text of the amendment, and the administration's sectional analysis be printed in the RECORD at this point.

There being no objection, the amendment and material were ordered to be printed in the RECORD, as follows:

AMENDMENT No. 1839

On page 2, after line 20 insert the Redesignate sections 6 through 13 as 7 through 14, respectively.

On page 2, after line 20, insert the following new section 6:

SEC. 6. Part C of Title I of the Domestic Volunteer Service of 1973 is amended by adding at the end thereof the following new section:

URBAN VOLUNTEER PROGRAM

"SEC. 124(a) In order to stimulate and encourage the involvement of individuals, local governments, neighborhood groups, voluntary associations, and local businesses in social and community development projects in urban areas, the Director is authorized to conduct, and make grants, contracts, or enter into cooperative agreements for projects related to an Urban Volunteer Program.

"(b)(1) The Urban Volunteer Program shall include an 'Urban Volunteer Corps' which shall include, but not be limited to:

"(A) Projects in urban areas which attempt to match specific needs of local governments and neighborhood groups with volunteers who possess needed skills on a request-for-service basis.

"(B) Development of listings of locally recruited, part-time volunteers as a resource bank within a community, city, or urban area.

"(2) Projects and activities of the Urban Volunteer Corps shall be administered in each city or urban area receiving funds under this subsection by a lead agency, which shall be designated by the Director with the concurrence of the mayor or other chief elected official.

"(c)(1) The Urban Volunteer Program shall include a "Good Neighbor Fund" program which shall provide grants, not to exceed $15,000, to nonprofit organizations in cities and urban areas to assist communities to:

"(A) reimburse the out-of-pocket expenses of volunteers working on neighborhood and community betterment projects, and

"(B) provide volunteers and neighborhood groups with the materials, tools, supplies and administrative support necessary to carry out neighborhood and community betterment projects.

"(c)(2) No grant under this subsection may be made to an organization within a city or urban area without prior consultation with the mayor or other chief elected official in a manner prescribed by the Director.".

On page 9, strike out line 21 and insert in lieu thereof "by amending subsection (b) to read as follows:

"(b) In addition to the sums authorized to be appropriated by subsection (a), there are authorized to be appropriated $40,000,000 for each of the fiscal years ending September 30, 1979, September 30, 1980 and September 30, 1981 for the purpose of carrying out the Urban Volunteer Program under Section 124 of this Act.".

APRIL 13, 1978.

HON. WALTER F. MONDALE,
President of the U.S. Senate,
U.S. Senate, Washington, D.C.

DEAR MR. PRESIDENT: Enclosed is a supplementary proposal for legislation to amend the Domestic Volunteer Service Act of 1973. The amendments proposed by this supplement are in addition to those contained in our legislative proposal, the Domestic Volunteer Service Act Amendments of 1978, introduced as S. 2823. We ask that the enclosed amendment be incorporated into and be considered concurrently with the amendments contained in S. 2823.

The new amendments which we are proposing are part of the President's New Partnership to Conserve America's Communities, announced by the President on March 27. These amendments will implement that part of the President's message which calls for an Urban Volunteer program to match the needs of neighborhood organizations with volunteers who have specialized skills, and which proposes that small grants be made to neighborhood organizations to cover the cost of tools, supplies, materials and administrative support necessary to carry out voluntary projects.

Specifically, the amendments would add a new section 124 to Part C of Title I of the Domestic Volunteer Service Act which would authorize a new Urban Volunteer Program as part of ACTION's Special Volunteer Program authority. The Urban Volunteer Program would consist of two parts; an Urban Volunteer Corps and a Good Neighbor Fund.

The proposed addition of a new section 124 to Part C of Title I of the Act would become section 6 of our legislative proposal; and present sections 6 through 13 would be renumbered accordingly. Authorization of appropriations for the program would be contained in a new subsection (b) of section 501 of the Act. The authorization would replace clause (2) of the present section 12(a) of our legislative proposal (new section 13(a)).

These proposals are described in detail in the enclosed sectional analysis.

The Office of Management and Budget has advised that there is no objection to the

submission of this draft legislation to the Congress and that its enactment would be in accord with the program of the President.

Sincerely,

SAM BROWN,
Director.

SECTIONAL ANALYSIS

Section 6 amends Part C of Title I of the Domestic Volunteer Service Act of 1973 (P.L. 93-113) by adding a new section 124 at the end thereof to provide legislative authority for a new Urban Volunteer Program. The new program will be composed of two major elements, an Urban Volunteer Corps, and a Good Neighbor Fund.

Much of the authority needed for elements of the new program is already available under part C of the Act. However, the Urban Volunteer Program, because of its size relative to previous programs operated under Part C, and because it embodies many innovative elements, some of which are not now clearly authorized, should have the benefit of an independent legislative authority.

Section 124(a) states the purpose of the Urban Volunteer Program, to stimulate and encourage the involvement of individuals, local governments, neighborhood groups, voluntary associations and local businesses in social and community development projects in urban areas. It also provides the Director with authority to conduct, and to use grants, contracts and cooperative agreements for projects related to the Urban Volunteer Program.

Section 124(b) authorizes an Urban Volunteer Corps, one of the components parts of the Urban Volunteer Program. Through assistance to lead agencies in approximately 145 cities or other appropriate urban areas, the Corps would match specific needs of specific neighborhood groups with volunteers on a request-for-service basis. The volunteers, recruited from business, academic institutions, non-profit organizations and public agencies on a part-time, unpaid basis would provide a supplementary technical assistance resource to neighborhood groups in such areas as management, publicity, fund raising, accounting, contract and grant administration and legal services. In addition, the volunteers would provide expert assistance to neighborhood projects which is specific to a particular need of the neighborhood, such as fixed-income consumer counselling or urban agriculture.

Urban Volunteer Corps projects and activities would be administered in each city or urban area by a lead agency, which would be selected by the Director of ACTION with the concurrence of the mayor or other chief elected official of the city or area.

The process of lead agency selection will be based on a partnership with the chief elected official who will be involved in the process from the outset. No proposal will be funded without the concurrence of the chief elected official. This process will include the following operational steps:

1. First notice of availability of UVC grants will go to the mayor.

2. ACTION and the mayor will work together in developing a proposal from the lead agency.

3. A letter of support from the Mayor will be required as part of all lead agency proposals.

The lead agencies would receive ACTION funds to recruit volunteers, evaluate requests for assistance or volunteers from neighborhood organizations, establish priorities, match volunteer skills with needs, provide out-of-pocket expense support to the volunteers, and monitor results. They would also develop a resource bank of volunteer skills within the metropolitan area to provide as large a pool of potential volunteer skills as possible, both to provide a maximum number of skilled volunteers, and to prevent overlapping of recruitment efforts by neighborhood groups.

The volunteers would all serve on a part-time basis and would not receive compensation, except for necessary reimbursement of expenses.

On a backup basis, technically skilled volunteers would also be recruited on a regional and national basis. ACTION would provide lead agencies with technical and management assistance, such as recruitment, management and support of volunteers, orientation and training, and community outreach.

Section 124(c) provides for a "Good Neighbor Fund" which would complement and supplement the Urban Volunteer Corps. The Director would be authorized to make direct grants to neighborhood groups in cities and other urban areas to provide a modest amount of seed money (up to $15,000, with an average of approximately $5,000) to neighborhood groups which utilize volunteers. The funds provided could be used for expenses such as:

Providing neighborhood groups with materials, tools, and other forms of administrative support necessary to carry out community betterment projects; and

Reimbursement of volunteers' out of pocket expenses.

Grants under the Good Neighbor Fund would not be limited to items which directly support volunteers, but could be used by the neighborhood group for necessary expenses to strengthen and improve resident participation in community activities and building cooperative linkages between communities.

The emphasis in project funding will be on tools, supplies, and other necessary equipment and not on personnel costs. Under no circumstances will permanent staff be funded or general overhead support provided. ACTION regulations will require that the local project sponsor contribute significant voluntary personnel resources to the project.

Grants from the Good Neighbor Fund could be made only after consultation with the mayor or chief elected official of the urban area in which the grant would be made. A time-limited mayoral concurrence will be required for grant award. This process will have two steps:

1. Advance Notice—Upon receipt of proposals from neighborhood groups, ACTION will send a letter to the appropriate mayor or chief elected official. This letter will notify the mayor that the proposals have been submitted.

2. Formal Notice of Intent. After ACTION has screened the proposals and selected the finalists, ACTION will send a letter to the mayor or chief elected official informing him or her of our intent to award a grant. The mayor will have 30 days to communicate concurrence or non-concurrence. If the mayor takes no action within 30 days, the grant will be awarded. If the mayor informs ACTION that he or she does not concur within the 30 day period, no award will be made.

Section 13(a)(2) amends Section 501 of the Act by striking out the present subsection (b) and by inserting a new subsection which authorizes the appropriation of $40,000,000 in each of the fiscal years 1979, 1980, and 1981 respectively for Urban Volunteer Programs under Section 124. This authorization would provide funds for the Urban Volunteer Corps and the Good Neighbor Fund.●

COMPREHENSIVE EMPLOYMENT AND TRAINING ACT—S. 2570

AMENDMENTS NOS. 1840 THROUGH 1842

(Ordered to be printed and referred to the Committee on Human Resources.)

Mr. HATHAWAY submitted three amendments intended to be proposed by him to the bill (S. 2570) to amend the Comprehensive Employment and Training Act of 1973 to provide improved employment and training services, to extend the authorization, and for other purposes.

AMENDMENTS TO CETA REAUTHORIZATION

● Mr. HATHAWAY. Mr. President, I am pleased today to submit three amendments to S. 2570, legislation to reauthorize the Comprehensive Employment and Training Act of 1973. I believe each of these amendments will serve to strengthen that act and make it better fulfill the purpose for which it was intended.

The first of these amendments would require CETA prime sponsors, as part of their comprehensive employment and Training Agreement, to include a detailed description of:

"(A) the methods and institutional arrangements which will be used to involve community based organizations and educational agencies in the development and implementation of the programs assisted under this Act; and

"(B) the methods and criteria which will be used to select such deliverers of services from an inventory of potentially available deliverers of services (which have expressed an interest in writing) maintained by the prime sponsor as records accessible to the public;".

This amendment would thereby establish a mechanism to promote greater cooperation at the local levels and at the same time provide greater accountability with respect to the utilization of public funds. While many prime sponsors are already involving all available deliverers of services to the maximum extent practicable, there are instances where resources and facilities which could be used to great advantage are somehow excluded from participation in CETA programs.

This amendment does not dictate to any prime sponsor which mix of deliverers of services to utilize. That would be contrary to the principles behind CETA, which stress local decisionmaking and responsibility. But the amendment does require the prime sponsor to set forth methods and criteria used to determine who will participate from an inventory of all those community-based organizations, educational facilities, and other deliverers of services, which expressed an interest in being a part of CETA.

This system of accountability will then be reviewed at the State and local level by the Governor, by the State employment and training council, by the prime sponsor planning council, by appropriate units of general local government, and by labor organizations in the area, as required by new section 104. With the language of this amendment, these individuals and entities will have the opportunity to review the rationale which went into determining which deliverers of services are to be relied upon, as opposed to being presented with a bottom line fait accompli.

Equally important, the community-based organizations and educational facilities will have the opportunity to assert to these bodies their ability to be relied upon and to ask that, if they are unjustifiably excluded, such a decision be reexamined.

While in most parts of the Nation, cooperation is occurring, there have been instances where individual prime sponsors have set up delivery services which are duplicative of those already existing. This amendment is intended to eliminate this practice and to encourage to the maximum extent possible the utilization of available community programs and facilities.

Further, this would not create an impossible paperwork or administrative burden on prime sponsors. On the contrary, the Department of Labor has estimated that the changes made by the reauthorization, by relying on one comprehensive agreement, along with annual plans, paperwork for prime sponsors would be cut by 2 between 20 and 33 percent.

The second amendment deals with the overall conditions set forth for utilization of CETA funds with respect to public service employment. This amendment modifies the condition contained in the administration bill requiring that public service jobs be provided in occupational fields which are most likely to expand within the public and private sector. The amendment adds as a complementary condition that public service employment at the same time:

shall meet community needs including but not limited to community betterment activities (including rehabilitation of public properties, assistance in the weatherization of homes occupied by low income families, demonstrations of energy conserving measures including solar energy techniques, and neighborhood revitalization), education, health care, transportation services, crime prevention and control, and environmental quality control.

Thus this language, set forth as an overall requirement on the expenditure of all CETA funds, will serve to insure that overall community needs are being met.

In the 1977 fiscal year, nearly 1 million individuals were employed in CETA funded public service employment (PSE) programs. Over $3.0 billion was devoted to these activities.

While many worthwhile projects were undertaken, at the same time there has been criticism in the national media regarding some make-work, leaf-raking activities. Though only a very small proportion to the overall effort, this has nonetheless served to give CETA as a whole a tarnished reputation.

This amendment would clearly stipulate that all public service employment activities should be directed toward community needs. As a condition on the utilization of such funds, this language will provide added impetus to fulfilling this goal in all parts of our Nation.

The third amendment I am introducing today would modify section 311 of the administration bill. Subsection (f) of that section reads as follows:

"(f) The Secretary is authorized to conduct demonstration and experimental projects and programs to assist persons, who might otherwise rely on public assistance or other income assistance, to find nonfederally assisted employment in the private and public sectors, and to provide federally assisted work and training opportunities for any such persons who are unable to find nonfederally assisted work or training opportunities. Such projects and programs may include job search assistance as described in section 205. The Secretary, in coordination with the Secretary of Health, Education, and Welfare and other appropriate Federal, State, or local officials, may integrate, coordinate, or modify other employment, training, public assistance, or income assistance programs, including provisions of such programs relating to work registration, job search, allowances, wage disregards, and sanctions for failure to participate, to the extent necessary to carry out effectively experimental and demonstration projects and programs under this subsection on behalf of persons eligible for or receiving assistance under such other programs. The Secretary shall issue regulations establishing appropriate wages, allowances, and working conditions for programs and projects under this section.

The amendment I am introducing would impose the additional requirement that the demonstration programs authorized under the act be conducted in rural as well as urban areas, in sparsely populated as well as densely populated areas, and in areas with inadequate means of transportation.

Section 311 is intended by the administration to fund demonstration projects which are to be the precursors to welfare reform. It is essential to the well-being of our Nation and to the integrity of each of our citizens that our welfare system be made to function fairly and equitably. I applaud the President's initiatives in this regard and look forward as a member of the Committee on Finance and the Committee on Human Resources to working to shape these proposals into their final form.

But in the course of demonstrating effective methods to reform this system, it is vital that these activities be conducted in all parts of our Nation. The problems of the rural poor are different from those of their urban counterparts. They are further isolated from available job opportunities and lack the resources—transportation and otherwise—to extricate themselves from their Catch 22 dilemma.

These problems may well be the most difficult to solve as we undertake welfare reform.

Yet, unless the statutory language is explicit, I fear that demonstration of welfare reform may be overly concentrated on urban centers, to the detriment of rural areas, and in the end to the detriment of the Nation as a whole to the degree that a proposed solution neglects these needs.

This amendment would clarify this situation and form the basis for mandating that rural areas be fully included. I intend to monitor this matter closely as definitive welfare reform proposals are developed, but this language will serve as an important first step to achieving our overall goals.

I am pleased to inform my colleagues that these amendments have been agreed to by the Subcommittee on Employment, Poverty, and Migratory Labor chaired by the distinguished Senator from Wisconsin (Mr. NELSON), on which I am privileged to serve. It is my firm hope that they will be retained by the full Human Resources Committee and the Senate as a whole, and by the Senate-House conference. I shall be working toward that goal.

Further, I am pleased to note that the subcommittee's actions on the administration's bill will serve to improve the CETA program as a whole. The subcommittee under the leadership of Chairman NELSON undertook a comprehensive redrafting of the act.

Particularly noteworthy are its actions with respect to improving local administration, tightening eligibility standards, strengthening antifraud provisions, and providing special emphasis on the needs for employment opportunities among veterans, older workers, displaced homemakers, and youth. With regard to the latter, I am particularly pleased that the subcommittee agreed to my proposal to mandate coordination of youth employment activities with those authorized by the Career Education Incentive Act.

That act, which I authored, provides funds for increased coordination between the world of work and the world of school, and is intended to provide students at all levels of education with greater knowledge of career opportunities and requirements, while they are still in the position to do something about their training and qualifications.

Overall, I believe that the CETA legislation approved yesterday by the subcommittee is responsive to the criticisms and concerns expressed and to the lessons learned over the last 5 years.

In this regard, I would like to call the attention of my colleagues to an editorial which appeared yesterday in the Bangor Daily News titled, "CETA in Maine." I ask unanimous consent that this be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD as follows:

CETA IN MAINE

Starting soon, Congress will begin work on President Carter's $11.4 billion, four-year extension of CETA, the Comprehensive Employment and Training Act.

CETA is big in Maine.

In fact, CETA is a major employer, not unlike today's paper mills and the thriving shoe factories of yesterday. The major difference, of course, is that CETA jobs are government-induced, paid for by the taxpayer.

Nonetheless, in an area with chronic unemployment and an abundance of unskilled workers, it is difficult to condemn CETA outright; it is an employer of last resort. And many disadvantaged people in Penobscot County have had their lives changed for the better as a direct result of a CETA program.

Interestingly, in a recent NEWSWEEK article dealing with fraud and loose management of various CETA programs across the country, the Penobscot County CETA program was mentioned as one of "the best."

Acording to this report, Penobscot County gets about $10 million of the $40 million pumped into Maine for CETA programs annually. This $10 million pays for the creation of 4,000 CETA jobs.

Among other things, these particular statistics show that in Penobscot County about 14 percent of the work force is CETA-employed, or about 1 in 7 workers are on the CETA payroll.

In other words, for all the good that CETA has done in terms of job-creation, it has at the same time produced a situation of economic addiction for Maine. By way of example, it has been estimated that Maine's current jobless rate of around 8 percent would jump to somewhere in the vicinity of 11 percent if Washington pulled the rug from under Maine's CETA program.

At the national level, there is deep disenchantment with CETA because of two problems:

—Substitution, which is a tactic whereby a local government uses CETA money to pay for an old job previously paid for out of local taxes.

—Scattered incidences of fraud in CETA, as well as the misuse of CETA money and positions as political patronage payoffs.

As a result of these and other intrinsic problems with CETA, on a national basis, there is speculation that the CETA extension is going to face some heavy scruntiny and perhaps some major roadblocks before the congressional process.

This is the danger of becoming hooked on CETA, or any other artificially created jobs program, even one that is apparently as well-managed as Penobscot County's. We are now in a situation in which 14 percent of Penobscot County's job force remains at the mercy of congressional whimsy and sentiment, as well as the national performance record of CETA.

And CETA, like so many other government panaceas before it, grows into much more than an interim stopgap measure. Over the long haul, studies indicate that CETA money is paying for four old jobs for every new one created. At that rate, the cost of true job creation rises to astronomical levels.

Mr. HATHAWAY. Mr. President, I share a number of sentiments expressed in that article. I am pleased that the Penobscot County Consortium program has been cited as a national model, and that it has served to meet the needs of citizens which otherwise would remain unmet.

I share the editorial's concern over the substitution problem. This was an area of major concern for the Subcommittee. Substantive changes in the eligibility requirements, limiting the participation to those with designated incomes (70 percent of the Bureau of Labor Statistics' lower living standard for structural unemployment programs, and 85 percent for countercyclical programs) along with strict limitations on wages paid, and the degree to which wages can be supplemented, should go a long way toward limiting the substitution problem. Also, recent studies of the Brookings Institute show that over 80 percent of the CETA jobs funded are not substituted, but rather provide new services.

Anti-fraud provisions have likewise been markedly strengthened, requiring that the complaints and sanctions provisions be beefed up, making it a Federal crime to impede investigations, and requiring that all employees who handle money be bonded.

The problem of providing long-term opportunities in the private sector remains a serious one. To approach this, the new bill contains much greater coordination with the private sector, and establishes in every area private and industry councils who will participate in the planning processes that insure that CETA job opportunities relate to those in the private sector, so that a CETA job will not be a dead-end job, but rather will form a basis for transition to full and productive employment in the private sector.

While I sincerely hope that the economy of our Nation, or any particular State does not become hooked on CETA, at the same time it is clear this program meets a pressing need, and as a result of the Subcommittee's work will serve to meet that need more efficiently and fairly.

Mr. President, all this has been accomplished through the subcommittee's work, and as I pointed out, these goals have been fostered further by the amendments I submitted.

I ask unanimous consent that the text of these amendments be printed in the RECORD at this point.

There being no objection, the amendments were ordered to be printed in the RECORD, as follows:

AMENDMENT No. 1840

On page 10, strike out lines 6 through 10 and insert in lieu thereof the following:

"(D) a detailed description of—

"(A) the methods and institutional arrangements which will be used to involve community based organizations and educational agencies in the development and implementation of the programs assisted under this Act; and

"(B) the methods and criteria which will be used to select such deliverers of services from an inventory of potentially available deliverers of services (which have expressed an interest in writing) maintained by the prime sponsor as records accessible to the public;".

AMENDMENT No. 1841

On page 40, strike out lines 17 through 19 and insert in lieu thereof the following:

"(n) To the extent feasible, public service jobs shall be provided in occupational fields which are most likely to expand within the public and private sector, and to the extent compatible with such objectives, shall meet community needs including but not limited to community betterment activities (including rehabilitation of public properties, assistance in the weatherization of homes occupied by low income families, demonstrations of energy conserving measures including solar energy techniques, and neighborhood revitalization), education, health care, transportation services, crime prevention and control, and environmental quality control.".

AMENDMENT No. 1842

On page 82, line 14, after the period, insert the following new sentence: "Such demonstration and experimental projects and programs are to be conducted, to the extent practicable, in rural and urban areas, in sparsely and densely populated areas, and in areas with inadequate means of transportation.".●

NAVIGATION DEVELOPMENT ACT—H.R. 8309

AMENDMENTS NOS. 1843 THROUGH 1845

(Ordered to be printed and to lie on the table.)

Mr. BELLMON submitted three amendments intended to be proposed by him to the bill (H.R. 8309) authorizing certain public works on rivers for navigation, and for other purposes.

AMENDMENT NO. 1846

(Ordered to be printed and to lie on the table.)

Mr. LONG (for himself, Mr. EASTLAND, Mr. EAGLETON, and Mr. DANFORTH) submitted an amendment intended to be proposed by him to the bill (H.R. 8309). supra.

NOTICES OF HEARINGS

COMMITTEE ON GOVERNMENTAL AFFAIRS

● Mr. RIBICOFF. Mr. President, the Committee on Governmental Affairs will hold hearings on May 3, 4, and 5 on S. 2640, the Civil Service Reform Act of 1978. The following witnesses will appear before the committee on May 3, 4, and 5:

Wednesday, May 3:

Dwight Ink, Former Executive Director, Personnel Management Project.

Panel: Frank Weil, American Veterans Committee; Otto Lukert, Concerned American Veterans; George Fredrickson, American Society of Public Administration; Judith Vandegriff, National Association of Commissions for Women.

Thursday, May 4:

Panel: Michael Pertschuk, Chairman, Federal Trade Commission; Douglas M. Costle, Administrator, Environmental Protection Agency; Kenneth T. Lyons, President, National Association of Government Employees; Albert A. Grant, American Society of Civil Engineers.

Panel: George E. Perry, Ethnic Employees of the Library of Congress; Howard Cook, Black Employees of the Library of Congress; Elaine R. Jones, NAACP Legal Defense Fund.

Friday, May 5:

Vincent Connery, President, National Treasury Employees Union; Rudy Weber, Immediate Past President, American Society for Personnel Administration; James D. Hill, National Federation of Professional Organizations; Raymond Nathan, American Ethical Union; Vincent J. Paterno, National President, Association of Civil Technicians; George E. Auman, President, Federal Professional Association.

This will conclude the Committee's Public hearings on S. 2640. Other individuals or organizations who wish to make their views known to the Committee on this legislation should submit written comments to me by May 15 at the following address:

Committee on Governmental Affairs, 3308 Dirksen Senate Office Building, Washington, D.C. 20510.●

SUBCOMMITTEE ON FINANCIAL INSTITUTIONS

● Mr. McINTYRE. Mr. President, I am pleased to announce that the Sucommittee on Financial Institutions of the Committee on Banking, Housing and Urban Affairs, will continue its hearings on S. 2096, the Right to Financial Privacy Act of 1977, and S. 2293, the Electronic Funds Transfer Act of 1977.

The hearings will be held on May 16 and 17, 1978. They will begin at 10 a.m. and be held in room 5302, Dirksen Senate Office Building.

Anyone who wishes further information regarding these hearings should contact Mr. William R. Weber, room 5300, Dirksen Senate Office Building, telephone: 202 224–7391.●

SUBCOMMITTEE ON FINANCIAL INSTITUTIONS PRACTICES AND OPEN GOVERNMENT

● Mr. CHILES. Mr. President, immediately following the oversight hearing on the Government in the Sunshine Act (P.L. 94–409) on Thursday, May 11, 1978, at 9:30 a.m., in room 1318 Dirksen, the Subcommittee on Federal Spending Practices and Open Government will hold an oversight hearing on the efforts to reduce Federal paperwork burdens. Mr. James McIntyre, director of the Office of Management and Budget, will be the only witness at both hearings.

For further information regarding the hearings, please contact Mr. Ronald A. Chiodo, chief counsel and staff director of the subcommittee.●

SUBCOMMITTEE ON FINANCIAL INSTITUTIONS

● Mr. McINTYRE. Mr. President, I am pleased to announce that the Subcom-

mittee on Financial Institutions of the Committee on Banking, Housing and Urban Affairs, will begin hearings on H.R. 10899, the International Banking Act of 1978, which provides for Federal regulation of participation by foreign banks in domestic financial markets.

The hearings will be held on June 14 and 15, 1978. They will begin at 10 a.m. and will be held in room 5302, Dirksen Senate Office Building.

Anyone who wishes further information regarding these hearings should contact Mr. William R. Weber, room 5300, Dirksen Senate Office Building, telephone: 202 224–7391.●

COMMITTEE ON FOREIGN RELATIONS

● Mr. SPARKMAN. Mr. President, I wish to announce that the Committee on Foreign Relations will begin hearings tomorrow, May 3, at 10 a.m., on the President's Middle East arms sales proposals. On May 3, the committee will hear administration witnesses; on Thursday, May 4, at 9:30 a.m., the committee will hear a variety of witnesses, including testimony from representatives of the CIA, General Accounting Office, the Defense Security Assistance Agency and from interested outside organizations; and on Friday, May 5, at 10 a.m., the committee has invited a number of distinguished outside witnesses. The list of witnesses will be announced as soon as arrangements are completed.●

ADDITIONAL STATEMENTS

ABORTION AMENDMENT

● Mr. CURTIS. Mr. President, I ask that a letter dated April 25, 1978 to me from Allen J. Beermann, Secretary of State of Nebraska, and a certificate from said Secretary of State dated April 25, 1978 and Legislative Resolution 152, adopted by the Legislature of Nebraska, be printed in the RECORD.

These documents follow:

DEPARTMENT OF STATE,
Lincoln, Neb., April 25, 1978.

Hon. CARL T. CURTIS,
U.S. Senator,
Washington, D.C.

DEAR SENATOR CURTIS: The Nebraska Unicameral Legislature duly assembled in the 85th Legislature, Second Session has adopted and passed Legislative Resolution 152. Said resolution has as its declared purpose to respectfully petition the Congress of the United States, pursuant to Article V of the United States Constitution, to call a convention for the sole purpose of proposing the Human Life amendment to the Constitution of the United States.

Legislative Resolution 152 was duly adopted and passed on the 21st day of April, 1978.

Pursuant to instructions found in Legislative Resolution 152, I am submitting herewith, a certified copy of Legislative Resolution 152. I trust that you will give appropriate action to the attached resolution.

Respectfully submitted,
ALLEN J. BEERMANN,
Secretary of State.

Enclosure.

STATE OF NEBRASKA,
DEPARTMENT OF STATE.

I, Allen J. Beermann, Secretary of State of the State of Nebraska do hereby certify that the Nebraska Unicameral Legislature duly assembled in the 85th Legislature, Second Session, did officially adopt Legislative Resolution 152.

Further, I hereby certify that Legislative Resolution 152 was adopted on the 21st day of April, 1978 and is signed by Gerald T. Whelan, President of the Legislature and certified by Patrick J. O'Donnell, Clerk of the Legislature.

Finally, I hereby certify that the copy of Legislative Resolution 152 attached to this certification is a true, correct and certified copy of the resolution as it was adopted by the Legislature.

In testimony whereof, I have hereunto set my hand and affixer the Great Seal of the State of Nebraska.

Done at Lincoln this twenty-fifth day of April in the year of our Lord, one thousand nine hundred and seventy-eight.

ALLEN J. BEERMANN,
Secretary of State.

LEGISLATIVE RESOLUTION 152

Whereas, millions of abortions have been performed in the United States since the abortion decision of the Supreme Court on January 22, 1973; and

Whereas, the Congress of the United States has not to date proposed, subject to ratification, a Human Life amendment to the Constitution of the United States.

Now, therefore, be it resolved by the Members of the Eighty-fifth Legislature of Nebraska, second session:

1. That the Legislature respectfully petition the Congress of the United States pursuant to Article V of the United States Constitution to call a convention for the sole purpose of proposing the following article as an amendment to the Constitution of the United States. The proposed article to read as follows:

ARTICLE —

Section 1. With respect to the right to life, the word person as used in this article and in the Fifth and Fourteenth Articles of Amendment to this Constitution applies to all human beings irrespective of age, health, function, or condition of dependency, including their unborn offspring at every stage of their biological development.

Section 2. No unborn person shall be deprived of life by any person, provided, however, that nothing in this article shall prohibit a law permitting only those medical procedures required to prevent the death of the mother.

Section 3. The Congress and the several states shall have the power to enforce this article by appropriate legislation.

2. That this application shall constitute a continuing application for such convention pursuant to Article V of the Constitution of the United States until the Legislatures of two-thirds of the several states shall have made like applications and such convention shall have been called by the Congress of the United States.

3. That this resolution shall be submitted to the Governor for signature in the same manner as a legislative bill.

TESTIMONY BY ASSISTANT SECRETARY OF STATE FOR AFRICAN AFFAIRS, RICHARD M. MOOSE, JR.

● Mr. CLARK. Mr. President, on April 25, 1978, the Senate Foreign Relations Committee conducted hearings on security supporting assistance for S. 2846. At that time, the committee heard testimony from Assistant Secretary of State for Africa, Richard Moose. He announced that South Africa had accepted the Western proposals for a peaceful transition to majority rule in Namibia under U.N. auspices. This is an important breakthrough for the United States and it relates to the administration's requests for foreign assistance which we will soon be considering on the floor. I submit Mr. Moose's testimony for the RECORD.

The remarks follow:

STATEMENT OF THE HONORABLE RICHARD M. MOOSE, JR.

Mr. MOOSE. Thank you, Mr. Chairman.

I believe that the committee has my prepared testimony and with your permission, since that testimony covers other elements of the foreign assistance security assistance request, I will simply briefly summarize the portion of it that has to do with security supporting assistance.

The CHAIRMAN. Your entire statement will be printed in the record.

Mr. MOOSE. Thank you, Mr. Chairman.

We are requesting $45 million for security supporting assistance for Fiscal Year 1979. This includes $20 million for balance of payments support for Zambia; $11 million for assistance in transportation for Botswana; and $14 million for refugees in southern Africa.

Throughout the southern African area we are faced with growing political instability. We are in many ways in a race between our hopes and our fears in this area. We find a mixture of both helpful and threatening elements.

I am very happy to say that I learned just before coming here this morning that the South African government has today accepted the Western plan for independence for Southwest Africa, known as Namibia. This agreement was announced in Parliament this morning by Prime Minister Jon Vorster. It represents a major step forward in the continuous search which we and the other Western members of the Security Council have been engaged in for the past year. It is an extraordinarily constructive and statesman-like step which has been taken by the South African government. It comes on the second day of the United Nations Special Session General Assembly on the question of Namibia. We are hopeful that this development with regard to Namibia may presage a similar breakthrough in our search for a peaceful solution to the question of Rhodesia.

I think there is no doubt that this development in Namibia, if it is reciprocated by a similar unconditional acceptance of the contact group proposals on the part of the Southwest Africa Peoples' Organization, will give a great impetus to the effort which we are making in Rhodesia, which, indeed, is very similar.

Our objective in Rhodesia is to work with all of the parties to find a means, a process, by which the people of Rhodesia, all of the people of Rhodesia, in a free and impartial environment can select their own future political leaders and make decisive decisions about the future of their country, bearing in mind that a shared objective of all of the Rhodesian parties is an independent country, a constitution which embraces not only majority rule but respect for individual rights.

In this process our objective has been to work with all of the parties for a free and fair election. We have no favorites. We favor neither side Our objective is a process which will be free and fair and seen as such by all of the parties and by all of the nations of the area, and regarded by the world as such, so that there can be independence, respect for individual rights and a settlement which will be lasting, solving a decade-old problem for the people of Rhodesia and offering the prospect of peace and stability in that area for the future.

Nevertheless in the interim, while we are continuing our negotiating efforts, we face a situation of immediate political and economic uncertainties. We believe that it is

in our interest to support those areas of stability which exist in southern Africa. It is toward that end that our request to this committee and to the Congress for security supporting assistance for Fiscal Year 1979 is directed.

In Botswana, which is one of the three countries that we propose to assist with the moneys that we are requesting here, we have a nation which is fully deserving of our support. It is beyond question a democratic, multi-racial society, capable of serving the role of model for other countries of the area.

It is, however, a country which is geographically and economically vulnerable.

Nevertheless, its leaders have played a consistently constructive role in support of the peaceful resolution of the Rhodesia conflict.

Zambia, the second of the three countries included in our request, is a key member of that group of states that border Rhodesia and is a key element, a key factor in our ability to find a negotiated settlement to the Rhodesian question.

Zambia has paid a very high price over the years for its support of United Nations sanctions on Rhodesia and a high price for its unswerving support of the cause of racial justice in southern Africa. It is a government which has also been hit and hit hard by depressed copper prices and the disruption of its transport network, a transport network which is disrupted by the political and the military instability of the area.

Growing unrest throughout this area of the world has generated a rising tide of refugees from war and from racial injustice. The United States has, I believe, a very strong and good humanitarian record in southern Africa; but the demands of the situation are increasing daily.

Many of those who are displaced are young, in need of education, in need of vocations, in need of training, to enable them at some point in the future to serve their nations.

We wish to join with other donor nations to provide the schooling, training, health care, and life support assistance for these persons whose lives have been disrupted. We believe that in so doing, we will be making a positive investment in the future of the region.

I would be happy to answer any questions you may have, Mr. Chairman, after the other witnesses have made their statements.●

HUMAN RIGHTS AND THE WITTEVEEN FACILITY

● Mr. ABOUREZK. Mr. President, the Senate will soon consider S. 2152, a measure which authorizes U.S. participation in the proposed supplementary financing facility of the International Monetary Fund, more commonly known as the Witteveen facility. This facility would have assets of roughly $10.5 billion, $1.7 billion of which would come from the United States. It would be used to provide financing for those IMF members whose balance-of-payments deficits are large in relation to their IMF quotas. The House version of S. 2152, H.R. 9214, was approved several weeks ago by a vote of 267 to 125. The House version contained a human rights amendment sponsored by Representative TOM HARKIN of Iowa.

Mr. President, when S. 2152 comes to the Senate floor, my distinguished colleague from Oregon, Senator HATFIELD and I intend to offer an amendment that is essentially the same as the Harkin language. A great deal of support has already been expressed for this amendment by many groups familiar with the IMF's role in the international monetary system. Recently, I received a letter signed by several prominent groups that did a good job of setting forth the content and objective of, as well as the need for, this amendment. I ask that a copy of this letter be printed in the RECORD following these remarks.

(See exhibit 1.)

Mr. ABOUREZK. The amendment would not interfere with the normal day-to-day operation of the Fund in general nor the Witteveen facility in particular. Its objective is as simple as its need is great—to impress upon the U.S. representatives to the Fund the importance of evaluating each Fund transaction in terms of its potential impact upon the human rights of the citizens in the borrowing countries.

This amendment does not preclude the formulation of stabilization programs that may often require a borrowing country government to impose austere controls over its economy. It does, however, instruct the U.S. executive director to work with the rest of the executive board members in formulating stabilization programs that would more effectively distribute the burdens of these countries as evenly as possible among all the income groups in the borrowing country. Currently, these hardships are all too often borne to a disproportionate extent by the poor in borrowing countries, causing unjust deprivation both in terms of basic needs and human rights. Not only is this unjust, in the long run, it is economically inefficient and politically destabilizing.

One of the amendment's provisions instructs the U.S. representative to do his best to see that the Fund's stabilization programs "foster a broader base of productive investment and employment," especially that designed to meet basic human needs. Implicit in this instruction is the understanding that a borrowing country should make every possible effort to apply IMF funds to uses that can be expected to generate positive economic returns to that economy over the long term. Some IMF transactions in the past can be called into question on the basis of this criteria. A recent article by Jim Morrell of the Center for International Policy does an excellent job of evaluating one instance of the IMF lending to South Africa which raises some doubt as to both the necessity of the loan and the use to which it was applied. I ask that the article be printed in the RECORD at the close of my remarks.

(See exhibit 2.)

Mr. ABOUREZK. One last provision of the amendment which may someday prove to be the most valuable is the requirement that the U.S. Governor make an annual report to Congress evaluating the impact of the facility's loans on the ability of the borrowing country to meet basic human needs and respect its citizens' human rights.

Mr. President, this amendment is needed. The human rights language we are proposing is a legitimate exercise of congressional authority and its oversight responsibilities.

I sincerely hope that the rest of my colleagues will join us in this meaningful expression of concern by Congress for the rights of the underrepresented poor.

EXHIBIT 1

WASHINGTON, D.C.,
April 20, 1978.

Hon. JAMES ABOUREZK,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ABOUREZK: We are deeply gratified to learn of your intention to offer a human rights and human needs amendment to S. 2152, the bill to authorize U.S. participation in the Witteveen supplementary financing facility of the International Monetary Fund. It is our understanding that your amendment is essentially the same as the one offered in the House by Representative Tom Harkin and adopted on February 23 by a voice vote.

For some time, field workers in church related assistance/development agencies have been aware that the economic hardships associated with Fund related reforms are often concentrated among the poorest people in the developing nations. While we recognize that certain internal economic reforms are necessary to counteract short term balance of payments difficulties, we believe that simple justice requires that the burden of these reforms be shared equitably.

Your proposed amendment would address this problem by requiring the U.S. representatives to the Fund's Governing Board to work for stabilization programs which, "to the maximum feasible extent, foster a broader base of productive investment and employment, especially in those productive activities which are designed to meet basic human needs."

The proposed amendment would further require the U.S. representative to take all possible steps to insure that Fund transactions, "do not contribute to the deprivation of basic human needs, nor to the violation of basic human rights."

Finally, in order to promote "a better understanding of the social, political and economic impact of the Fund's stabilization programs, "the amendment would require the U.S. Governor of the Fund to provide Congress with an annual evaluation of the human rights and human needs impact of the Fund's transaction over the preceding year.

In our view, the proposed amendment would do nothing to impede implementation of Fund directed reforms, but it would do much to insure that any hardships entailed in those reforms would be borne fairly by all the citizens of the borrowing country. We applaud your initiative in introducing this amendment and hope that the Senate will adopt what you have proposed.

GEORGE A. CHAUNCEY,
Chairperson, Interreligious Taskforce on U.S. Food Policy.

CAROL COSTON, O.P.,
Executive Director, Network.

GRETCHEN EICK,
Policy Advocate, Office for Church in Society, United Church of Christ.

WILLIAM L. WIPFLER,
Director, Human Rights Office, Division of Overseas Ministries, National Council of Churches of Christ in the U.S.A.

J. BRIAN HEHIR,
Associate Secretary for International Justice and Peace, U.S. Catholic Conference.

PETER HENRIOT, S.J.,
Director, Center of Concern.

EDWARD SNYDER,
Executive Secretary, Friends Committee on National Legislation.

ARTHUR SIMON,
Executive Director, Bread for the World.

EXHIBIT 2

UNDERWRITING APARTHEID

On November 9, 1976, the UN General Assembly voted to request the International Monetary Fund, a specialized agency of the UN, to "refrain forthwith from extending credits to South Africa."

On November 10, 1976—one day later—the IMF approved a $186 million credit to South Africa. Together with previously approved loans, that brought the IMF's total credits to South Africa up to $464 million—more than to the rest of black Africa put together.

This sequence of events shows that whoever does set policy for the IMF, an international lending agency with resources of over $30 billion, it is certainly not the UN General Assembly. The official word is that the IMF makes its own policy, guided only by its Articles of Agreement, framed at the historic Bretton Woods, New Hampshire, international monetary conference of 1944. The articles say that the purpose of the IMF is to "promote monetary cooperation" in the world, prevent exchange restrictions, and provide member nations with temporary loans to help them overcome balance-of-payments difficulties. Which nations are to get these loans, and in what amounts, is said to be determined by the size of the member's original contribution to the IMF and by other exceedingly complex rules as interpreted by the Fund's executive board and staff. (The executive board is made up of directors from all the IMF's 132 member nations, with smaller nations sharing directors. The United States controls 23 percent of the vote, the largest share of any single nation.)

The IMF's image, then, is that of an economic decision-making body working on the basis of financial data and mathematical formulas. Thus, if South Africa got more money than the rest of black Africa put together—indeed, more money than any other country in the world except Great Britain and Mexico—it was simply because the technicians at the Fund determined that South Africa had a larger quota and greater objective need than other nations. In any event, it was a purely technical, purely economic decision. Such is the explanation offered uniformly by the IMF, the U.S. Treasury Department, and South Africa itself.

However, a reading of the confidential minutes of the executive board's November 1976 meeting on aid to South Africa tells a quite different story. It reveals that the IMF, far from being bound in its decisions by purely technical criteria, seems to adjust its "facts" to serve its own purposes. At that meeting, the directors for West Germany, Italy, Spain, Portugal, and Malta accused the Fund's staff of rigging statistics to favor South Africa's case for aid. Lamberto Dini, the Italian executive director, found the staff's calculations "suspect" because their estimate of South Africa's expected export shortfall (the figure used to justify South Africa's case for aid) appeared to equal exactly the amount—50 percent of quota—requested by South Africa. Eckard Pieske of West Germany also found this coincidence remarkable and flatly stated that the projected shortfall had been "tailored to the size of the requested drawing." Despite this, the IMF executive board, including Pieske and Dini, approved South Africa's request. (Ironically, later events bore out the staff's projections.)

Rigging the statistics was only the most sensational issue raised during the IMF meetings on South Africa. At an earlier meeting on January 21, 1976, several of the directors discussed the question of South Africa's huge gold reserves and whether these reserves obviated the need for the Fund's balance-of-payments assistance. "South Africa had at its disposal one of the world's largest gold stocks," said Jacques de Groote, the director for Belgium, Austria, Luxembourg, and Turkey. With the recent increase in gold prices, he continued, a naive outsider might even expect South Africa to contribute to the IMF rather than seek its aid. Of course the naive outsider would not be aware that South Africa could not sell its gold at will for fear of disrupting the world gold market. But South Africa could still use its gold as collateral for other loans to cover its balance-of-payments deficit, he said. "It could be argued that the current account deficit expected in 1976 was not entirely beyond the control of the authorities," he concluded.

Antoine W. Yameogo of Upper Volta, speaking for 17 black African nations, also touched on this point. South Africa valued its gold reserves at the official price of $42 an ounce, he complained, while the market price was $130 an ounce. Valued at the market price, the reserves amounted to $2.7 billion, or the equivalent of about six months' import. (Three months' cover is generally considered adequate.) South Africa could manage its short-term problem, he said.

While European and African delegates representing a total of 22 nations expressed various reservations, the IMF aid package to South Africa drew the unconditional support of the U.S. and British directors and passed easily. Thomas Leddy, the alternate U.S. director sent by the Ford administration (and still serving today) made a particular point of endorsing the South African request and found the staff's handling of the statistics to be entirely reasonable. The Brtiish director, Peter Bull, was even more enthusiastic in his support for IMF aid to South Africa, saying the aid would among other things give the South African authorities "some feeling of international support," which in his opinion they deserved.

As a grisly footnote to these meetings, an April 1977 IMF economic study said that the budgeted increase in South Africa's military spending in 1976/1977 came to $450 million. The amount of the Fund's assistance was $464 million. (This assistance is fungible, and can be used for military or any other purposes.) Indeed, military spending was an important—if unacknowledged—factor in South Africa's original aid request. The major component of the South African government's overspending which, through an indirect process, led the government to request aid from the IMF, was a massive and continuing increase in the defense budget. From 1972 to 1975, defense expenditures rose by 97 percent in real terms. For 1976/1977 another real 25 percent increase in defense expenditure was budgeted. An April 1977 IMF study noted:

In order to accommodate an increase of close to 40 percent in defense expenditure [in nominal terms] and to ensure at the same time that total government expenditure would not increase in real terms, other government expenditure was budgeted to rise in 1976/77 by only 6 percent in nominal terms and thus to decline substantially in real terms.

For the 1977/1978 budget, the IMF study reported another defense expenditure increase of 21.3 percent—to $1.9 billion—while nondefense expenditures again declined in real terms. "Defense expenditure has been a major cause of the rapid increase in total current expenditure," the IMF accordingly concluded in its confidential study, and in turn this rapid increase in government spending led to record budget deficits of 6.8 percent of gross national product in 1975 and over 7 percent of GNP in 1976.

These massive budget deficits fueled inflation in South Africa because the government was in effect printing money to pay for more weapons. From 1971 through 1975, the supply of money and near-money increased at an approximate rate of 20 percent a year. In turn, this inflation caused balance-of-payments problems as South Africa tried to peg its exchange rate and to maintain currency value through foreign borrowing, import taxes, and other restrictions on trade. Although the IMF study does not give a figure for South Africa's arms imports—understandably a very sensitive subject—the study does report "increases" in expenditures on defense equipment" as a cause of balance-of-payments and terms-of-trade problems in 1976. Defense expenditures leading to budget deficits, budget deficits leading to inflation, inflation leading to balance-of-payments problems—this is the indirect path by which South Africa arrived at the IMF's door; in addition there was the direct increment to the balance-of-payments deficit caused by rising arms imports.

The IMF's favorable action on South Africa's requests took place during the Ford administration, when United States policy, under Secretary of State Henry Kissinger, emphasized the carrot rather than the stick in dealing wih South Africa. In 1977 South Africa drew down a further $98 million under the terms of its standby arrangement, to bring the two-year grand total up to $464 million. Of the $98 million collected in 1977, $42 million was received in January under the Ford administration and $56 million in June as the Carter administration entered its fifth month.

What has been the policy of the Carter administration toward IMF loans to South Africa? Interviewed for this article, Undersecretary of the Treasury Anthony Solomon said he had not even been aware that South Africa was getting any money from the IMF in 1977. Since South Africa was only drawing upon a loan that had been previously approved, he was not informed. Yet Solomon was the Carter administration's chief spokesman for the new $1.7 billion U.S. contribution to the IMF passed by the House in February. Solomon declined to reveal the Carter administration's position on future South African aid requests. Still, although it would not state its own policy, the administration opposed any attempt by Congress to attach a human rights amendment to the IMF bill as an "attempt to introduce noneconomic factors into IMF decisions." The House passed the amendment anyway.

It is still too early to tell whether the human rights amendment on the bill will work. The amendment as passed leaves a great deal of discretion to the U.S. director on the IMF board, and in private discussions on Capitol Hill the current director, Sam Cross, and his alternate, Thomas Leddy, made it clear they are not interested in pursuing human rights through the IMF.

But it is not Congress that is injecting politics into IMF decisions; political factors are already present in IMF deliberations. For example, when Vietnam applied to the IMF last year for a $36 million loan, the United States was the only country to oppose it—but it couched its political objections in purely economic terms. Also, both Great Britain and the Scandinavian delegates formally abstained on two IMF loans to Chile in 1976 because of that country's dismal human rights record. The directors and staff of the IMF have developed a remarkably Aesopian language whose function is to disguise political decisions by using economic terms and to maintain the fiction of the institution's purely technical, purely economic character. In reality, nothing in the world is more political than money, and the IMF, one of the most aloof and untouchable institutions in Washington, is also one of the most political.●

TEXAS SMALL BUSINESS AWARD WINNER

● Mr. TOWER. Mr. President, I am pleased to take the opportunity afforded

by the President's proclamation of National Small Business Week to express my appreciation for the contributions of small business to our country.

It is also a pleasure to pay tribute to the Texas Small Business Person of the Year, Adrian E. Baca of Anthony, Tex.

Our country and our prosperity have been built upon the values underpinning small business entrepreneurship.

Small business has provided creative opportunities through which countless Americans have found self-fulfillment.

For many generations it has meant a means for upward mobility.

In today's largely impersonal market it provides a human force.

Economically, small business has played a critical role in the process of innovation. In Texas individual entrepreneurship was epitomized by such resourceful wildcatters as C. M. "Dad" Joiner who defied the predictions of the geologists and discovered the East Texas oil field near Turnertown and Joinerville in Rusk County, Tex.

It is fitting that the award this year should go to Adrian E. Baca who has contributed to the increase of the economic welfare of his community.

The SBA announcement noted that Adrian Baca is a citizen of the United States by choice, not by chance as he was born in Juarez, Chihuahua, Mex. Later, he helped his father build a business from a sidewalk vending stall to a well established grocery store on South Stanton Street in El Paso, Tex. Presently, Mr. Baca is the president and owner of La Feria Park 'n Shop, Inc., and president of AFB Enterprises which he opened in the small town of Anthony, Tex., in 1961. Recognizing his many civic contributions to the community, the people of Anthony elected Adrian Baca as their mayor.

To Mr. Baca, I express my thanks to you for your economic and social contributions to your community and the State of Texas.●

TEENAGE PREGNANCY

● Mr. HATHAWAY. Mr. President, I am pleased to join my colleague, Senator KENNEDY, in introducing S. 2910, the Adolescent Health, Services and Pregnancy Prevention and Care Act of 1978.

Nearly 13 million of the 60 million women in the world who became mothers in 1975 became parents before they became adults. The teenage childbearing rates in the United States are the fourth highest among industrialized nations, and indeed, higher than many less developed nations. Adolescent childbearing is becoming an alarming problem, often involving serious health and socioeconomic complications in the lives of these young mothers, fathers, and their children.

This bill addresses the need of adolescents for information and education to prevent initial and subsequent pregnances, strives to assist those who are already pregnant with both prenatal and postnatal health care and support services, to help them remain in school, and become productive and contributing members of society. Finally, it provides for education of those who choose to keep their children to assist them in becoming responsible parents.

The bill intends to fulfill these goals by authorizing grants to public and nonprofit private agencies to help communities support and coordinate services and programs relating to pregnancy. With the emphasis of this bill on the prevention of pregnancy, these funds may not be used for abortion—the purpose is to provide alternatives to abortion.

The statistics which underscore the need for increased services are truly alarming.

Of the 21 million teenagers in the United States between the ages of 15 and 19, 11 million—a little more than half—are sexually active. Further, one-fifth of the 8 million 13-and-14-year-old youths in this country are estimated to have had sexual relations. These teenagers are no longer traditionally confined to minorities and to those of a lower socioeconomic status, but include teenagers from higher income and nonminority groups.

One million young women aged 15 to 19 and 30,000 girls under 15 become pregnant each year, resulting in over 600,000 births. The out-of-wedlock birth rate has declined among women aged 20 to 24, but has increased among women aged 14 to 19, with the result that for the first time since 1961, the birthrate among single 18 to 19 year olds is higher than that of 20 to 24 year olds.

For those teenage parents who marry, studies have shown that divorce or separation are two to three times higher than in marriages of people in their early twenties. The combination of the strains of adolescence itself, family responsibility, and economic instability are often too much for a young marriage to bear.

Mr. President, a realistic and sad analysis of the limited life choices of the teenage mother appeared in volume 30 (1968) in the Journal of Marriage and the Family. It was written by Arthur A. Campbell and entitled "The Role of Family Planning in the Reduction of Poverty." I ask that it be printed in the RECORD at this point.

The analysis follows:

The timing of the first birth is of crucial strategic importance in the lives of young women, because the need to take care of a baby limits severely their ability to take advantage of opportunities that might have changed their lives for the better. In this regard, the problems posed by births to unmarried women are especially serious. The girl who has an illegitimate child at the age of 16 suddenly has 90 percent of her life's script written for her. She will probably drop out of school; even if someone else in her family helps to take care of the baby, she will probably not be able to find a steady job that pays enough to provide for herself and her child; she may feel impelled to marry someone she might not otherwise have chosen. Her life choices are few, and most of them are bad. Had she been able to delay the first child, her prospects might have been quite different, assuming that she would have had opportunities to continue her education, improve her vocational skills, find a job, marry someone she wanted to marry, and have a child when she and her husband were ready for it. Also, the child would have been born under quite different circumstances and might have grown up in a stable family environment.

Mr. HATHAWAY. Teenage mothers do not often have the skills necessary to support themselves, or to compete in the working world. It was found in New York in 1973 that 85 percent of those who became mothers when they were 15 to 17 years old had not completed high school. Nine out of ten of those who have a child at age 15 or younger never complete high school either, and more than 4 in 10 never get beyond the eighth grade. Female teenage dropouts most often give pregnacy as the reason for leaving school. And although legislation and regulations have confirmed the right of teenage mothers to an education, teachers and counselors often encourage pregnant students to leave school.

Therefore, due primarily to a lack of skills and secondarily to a lack of infant day care centers, teenage mothers are less likely to work and more likely to be on welfare. The younger the mother, the higher the risk of poverty for her family, so just in terms of economics alone, it makes sense to prevent teenage pregnancies.

Beyond these overall educational, social and economic considerations, we must realize that because very young women are biologically too immature for effective childbearing, there are serious hazards directly related to the health of the mother and to her child. The risk of death in the first year of life is 2 to 3 times higher for babies born to teenage mothers than to mothers in their early twenties. Also twice as high among babies born to teens is low birth weight. This is a major cause of infant mortality and birth injuries such as neurological defects which may involve mental retardation.

Not only does the child of a teenage mother have a higher risk of defect or death than a child born to an older mother, but the teenage mother herself is more likely to suffer complications of pregnancy, or death, due to the depletion of nutritional reserves needed for her own growth.

Mr. President, the evidence supporting the need for legislation to prevent unwanted teenage pregnancies is overwhelming. I cannot emphasize enough our responsibility to recognize this problem, and to provide the help and support which our teenagers need as alternatives to abortion. We must be realistic, and as the "parents" of this Nation, do what must be done to insure the mental, physical, educational and economic health and well-being of the generations who are now struggling toward adulthood, and toward the ultimate responsibility of our future society. I look forward as a member of the Committee on Human Resources to the consideration of this legislation.●

GOVERNMENT REGULATIONS

● Mr. BELLMON. Mr. President, I am sure my colleagues in the Senate share my concern for the growing number of Government regulations which seem to be multiplying daily. They have become

a source of increasing dissatisfaction among the American public and especially the small businessman.

This is not to say all regulations are needless, nor am I implying that many regulations are not beneficial to the welfare of our citizens. However, frequently Congress passes laws, which once interpreted by regulation authors, become completely unrecognizable to the same legislators who sponsored their passage.

Mr. Richard L. Lesher, president of the Chamber of Commerce of the United States, has successfully conveyed in his article, "Mr. Crusoe Discovers Government Regulations," the effect many of the needless regulations can have on individuals. His is a light-hearted attempt to emphasize the all-too-serious and growing problem of superfluous Government regulation.

Mr. President, I ask that Mr. Lesher's article be printed in the RECORD.

The article follows:

MR. CRUSOE DISCOVERS GOVERNMENT REGULATIONS

(By Richard L. Lesher)

Suppose you found yourself shipwrecked on a remote island, like Robinson Crusoe. Your survival would depend on your ability to get enough water and food, and perhaps shelter as well.

Let's say you need one fish a day to live, and that's about what you can catch with your bare hands or a primitive spear. Under these circumstances, you'd have to spend all your time working just to avoid starvation.

But one day, through luck or extra hard work, you catch two fish and dry one. Now you have something in the bank. You can take the next day off, or put the time to some other use. Being smart, you use the day to make a fishing net.

That extra fish you saved is your "capital" and the net is a capital investment. Thanks to the net, you can catch a whole week's worth of fish in one day. That leaves you time to build a hut, make a bow and some arrows, explore the island, and do some hunting.

While exploring you run into Friday, your native companion. Friday has a lot of dried fish, some of which were left to him by his late grandmother.

It occurs to you that if Friday lent you fish to live off of, you might have enough time to raise a crop of corn and domesticate some of the wild animals. You suggest this to Friday. "What's in it for me?" he wants to know. You agree to repay the fish (or the equivalent in corn, goat's milk or pork), plus something extra for his trouble and risk. That's interest. And interesting enough, you are both planning to gain from the use of Friday's capital.

Your experiments (research and development) are successful. The farm works. Since Friday seems to be a better fisherman, you leave that to him and concentrate on the farm (specialization of labor). Soon, a regular trade is going between the two of you.

Neither of you is working any harder than before, but now you both have plenty of food, the luxury of variety, and a "surplus" which can be consumed at leisure or invested in further capital improvements. In other words, you have become much more "productive," thanks to capital investment, research and specialization. Because of this growth in productivity, you have a higher standard of living.

Then along comes the island government (don't ask from where). In return for half of your output, they provide you with certain services.

Some of these services increase your productivity: The government agricultural expert teaches you how to grow more corn per acre. The road-builders clear a better path between your place and Friday's. And so on.

But others have the reverse effect: The Worker Safety Bureau says you have to stop using your bow—its string might break and hurt you. The Housing Department says your hut is not strong enough to resist a hurricane and must be rebuilt. The Pure Food Agency says all of your food will have to be inspected before you can trade it with Friday. And so on.

All of these rules have a negative, but bearable, effect on your output. Poor Friday, however, is hit much harder. The Preservation of Cute Fish Administration informs him that what he is catching has been declared a Cute Fish and is therefore protected. He must catch something else. But nothing else is as plentiful or as easy to catch.

Friday's productivity plummets. Obviously this affects Friday. But it affects you, too. He has less to trade for what you produce, and you are producing more corn than you want to use yourself. So, you are no longer able to collect in fish the full benefit of your own production.

Friday will probably raise the price of his fish. And you will probably continue to buy some. But you may also ask yourself, "Why work so hard?" So you cut back your output and spend more time walking on the beach.

Thus, the net effect of the government regulations has been to reduce Friday's productivity and yours, too. Total production is down. Now you both have a lower standard of living.

Are all of the intangible government benefits worth the cost? That's something only you and Friday can answer. But it's a question that needs to be asked. And that's no fish story.●

A STRATEGY OPTION FOR THE COMMERCIALIZATION OF ALCOHOL FUELS

● Mr. ABOUREZK. Mr. President, the interest in the production of alcohol fuels from renewable resources appears to be genuine and sustainable. In Congress, especially, as Eliot Janeway pointed out in a recent article in the Washington Star, "the idea of alcohol fuel is gradually taking a hold." Yet, there is still a great deal of opposition that will have to be overcome before the commercialization of alcohol fuel is a reality. Unfortunately, much of this opposition emanates from high places and is extremely difficult to surmount.

Because the technology for deriving alcohol fuels from renewable resources is here today and needs only refinement, the opponents of its development have been forced to attack it on the grounds that it is not cost competitive with regular gasoline. Little mention is made of how heavily subsidized the petroleum and nuclear industries have been by Federal Government in order to get those two industries where they are today. Even without such subsidies, as Mr. Janeway points out—

The cost of penalty of mixing alcohol with gasoline is peanuts alongside the cost of appeasing OPEC, devaluing the dollar, or taxing fuel consumption.

Mr. President, the Janeway article also examines the linkage between alcohol fuels development and the price depressing grain surpluses that periodically plague this Nation's farm sector. In this context, he lays out an interesting bargaining strategy that deserves to be added to the alcohol fuels commercialization debate. I ask that the article be printed in the RECORD.

Thank you.

The article follows:

[From the Washington Star, Apr. 23, 1978]

"PLOY" ON ALCOHOL FUEL OFFERS DOUBLE BENEFIT

(By Eliot Janeway)

The idea of alcohol fuel is gradually taking hold. As so often happens, pressure is mounting to do the right thing, but in the wrong way and for the wrong reason.

The energy problem brought forth the alcohol idea; and the supposition that there was, is, or will be an oil shortage has been feeding it. Though the oil shortage scare is beginning to fade away, the push for alcohol play is gaining momentum.

The residual half-truth behind the illusion of an oil shortage is the reality—for Americans, at least—of extortionate oil costs. Other oil-importing countries, more attuned to the exigencies of survival, have mobilized pragmatic methods of minimizing their oil cost inflation.

Falling back on alcohol is the effective way to stretch the national fuel supply and certainly to satisfy the popular demand to lessen our dependence on oil imports. The increasing popularity of the idea is typified by feature articles in the New York Daily News confirming what I have been advancing for four years: That alcohol mixed with gasoline in the ratio of 1:10 burns cleaner than conventional gasoline and is just as efficient.

Moreover, the use of "gasohol," as this mix is called, prevents the need for the weight-inflating, and consequently, cost-inflating gadgetry now overloading cars to prevent pollution.

The Government, which is talking such a good game against inflation, is itself directly responsible for inflating the cost of cars, which are essential tools of work for average Americans.

If the administration had gone the alcohol route, cars would be cheaper and the atmosphere cleaner; octanes would be higher, too. Instead, the regulators have forced costly antipollution devices on the manufacturers, who don't know how to deal with government agencies, and on their customers, who are running out of money.

Now that the media and the members of Congress are taking it up in a big way, alcohol is clearly an idea which is ready to be assessed. The beauty of alcohol as a backup source of fuel springs from its real and indeed, almost universal availability. It is one of the oldest products of technology and one of the simplest. It can be produced from minerals, grains, vegetation—even garbage.

Ironically, the case for burning alcohol with gasoline is not that it will cut costs. Alcohol does entail a cost penalty—but how much depends on its source.

Precisely because of this, alcohol was made to order for Carter's simplistic approach to the energy problem: It offers more domestic supply, from domestic sources, at somewhat higher cost.

To be sure, the cost penalty of mixing alcohol with gasoline is peanuts alongside the cost of appeasing OPEC, devaluing the dollar, or taxing fuel consumption.

Carter's pollster, Pat Caddell, had recommended the strategy of picking a fight with the oil companies even if this meant accepting direct responsibility for higher consumer fuel costs by plumping for excise tax increases.

Carter could have made more mileage following Caddell's advice by making the alcohol play at the outset of his administration instead of falling for the shortage myth.

This would have raised fuel costs less than he is still demanding and would also have given him a quick and easy win over the oil companies.

It was Caddell who carried over a bias against the oil companies from his ill-fated masterminding of the McGovern campaign. When he started to handle Carter, Caddell proceeded on the premise that any policy targeting the oil companies as today's malefactors of great wealth would score big with the folks.

This easy opportunism glossed over the distinction between money and wealth. The oil companies have lots of money and will keep it—provided they come under no pressure to develop their remaining wealth, embodied in their reserves of various fuels.

OPEC has pushed them out of the profitable part of the oil business. The profiteering has been OPEC's; the oil companies never made money on transportation, manufacturing or marketing even while they still owned their cheap reserves, and even before the cost of the crude they need to import began to come down.

One fight against the oil companies, however, needs to be made, and that is on the alcohol issue. It's time to press the oil companies to change their refining methods in order to produce more by-product alcohol from the sludge now left over from the extraction of commercial products. This would lower the tonnage of by-product petrochemicals and plastics saturating the market; these are in a perpetual price war and the profit margins on them are minimal, at best.

The problem for Carter, in nudging the refinery managements to change their ways and vary their product mixes, is that such a switch to pragmatism would collide with his road-show about tax reform.

On the tax front, he is bamboozled by still another myth: That tax reform will produce a harvest of tax revenues. In fact, what would do this are tax incentives to absorb the manageable cost penalty involved in mass-producing alcohol at existing oil refineries. But any such switch on Carter's part would be out of the question for two reasons: (1) he would lose face, and (2) it would work. Never mind the pragmatic consideration that Congress has already given him a lead by voting a 4-cent-a-gallon excise tax credit for the alcohol content of gasohol.

At any rate, Carter is stuck with the scare he has promoted of a prospective if not yet actual oil shortage, as well as with his proprietary demagoging against oil imports and for consumption austerity.

He has neglected the alcohol play even to the point of failing to use the appropriations he inherited for research and development. In fairness, this is probably due more to ignorance than perversity.

Like the recurrent myth of oil shortage, the idea of diverting grain to the alcohol play for a history. At the worst of the wartime dislocations following Pearl Harbor, Sen. Guy Gillette of Iowa, chairman of the Senate Committee on Agriculture, conceived the reasonable enough strategy of putting on a double play to get rid of gas ration coupons as well as the grain surplus which was backing up because the Farm Belt's export markets had fallen into enemy hands.

But then Harold Ickes, the redoubtable Secretary of the Interior, bulled through the Big Inch pipeline from Texas to the Atlantic Seaboard, and that oil shortage scare faded away. The Nazi submarine pack found itself technologically unemployed.

The prototypical scheme for matching up an oil shortage and a grain surplus, and using each problem as the solution for the other, was aborted.

Superficially, the recurrence of both problems offers a second chance to pull off the coup now being talked up.

There is, however, a more sophisticated and effective way to mount an alcohol counteroffensive on two fronts at once, against our foreign oil suppliers, who are bluffing us into paying exorbitant prices, and against our chintzy foreign crop customers, who are bluffing us into accepting unbusinesslike discounts for what they need at any price.

This strategy does indeed call for us to go full speed ahead with the alcohol play. But it also calls for us to think of it more as a ploy than as a play. Doing so need in no way impair its plausibility.

On the contrary, the very process of laying out the alternatives for the farm export customers who have been having a party at the expense of our farmers and, therefore, of all of us, would jolt them into recognizing that they have been what our British friends call "too clever by half" in dealing on our farm futures markets.

Advocates of dedicating our grain surplus to fuel run into standard arguments.

Cost is only the first; and, of course, if the oil shortage were for real, and the OPEC price spiral were still on, this would be an increasingly flimsy objection. But as it is, the availability of alcohol from oil refinery derivatives maximizes the cost objection to using grain rather than minimizes it—especially with the Treasury's borrowing needs going through the roof, and the Miller Fed pushing interest rates up even faster than the Treasury is bidding them up with obvious inflationary consequences.

Curiously enough, the second objection to redirecting our uncomfortable grain surplus is that we don't have enough grain to do it.

At first blush, this resistance to the idea seems perverse, and it certainly is provocative to our depressed and discouraged farmers. After all, the object of the exercise is to absorb a farm surplus that was merely burdensome, is now intolerable, and is well on its way to becoming ruinous.

If the purpose of policy were to solve any single problem in a logical vacuum, there's no doubt that using the grain deflation to reverse the oil inflation would put grain prices up and bring oil costs down. But policy planning is multidimensional; specifically, it encompasses our foreign dealings as well as our domestic operations. The purpose of using alcohol to improvise a trading ploy abroad, instead of to make a back-scratching play at home, is to invite our foreign customers to reflate our farm income, while mobilizing oil-derived alcohol flows to deflate our fuel costs.

Here's the way to go about it, now that the gasohol idea is at last taking hold and the farm crisis won't go away.

Begin by making a naively calculated approach to all our sophisticated grain export customers. Take them into our confidence. Tell them that public support for gasohol is building, that a "for keeps" commitment to mass produce it makes sense, and that we mean to go ahead with it.

Then lay out the alternatives for our grain customers, remembering that the most successful trading ploys are low-key exercises in relaxation, or offers which are impossible to refuse.

Tell them that we have the choice of going the grain route to alcohol or falling back on our oil refineries as a reservoir. Ask our trading partners to help us decide which source of raw material to rely on for our alcohol.

Explain that once we commit ourselves to grain, as an act of desperation regardless of the cost penalty, they—or customers!—will be stuck with the consequences.

For the day we let them panic us into taking this momentous step against our farm depression, our grain will be gone for them to use. We would not have enough even to feed our own alcohol refineries a-building.

Our carburetors would not know whether the alcohol burned in them came from grain or oil. Our farm surpluses would melt, no matter whether our grain went out in export cargoes or into domestic alcohol refineries not yet on the drawing board.

But our shrewd crop customers on the other side of the poker table would. For the alcohol play, which seems so sensible for us to make, would be fatal for them, once they let it go past the point of a ploy.

There's a simple move for us to make to find out how long our grain customers propose to bluff us into carrying the grain inventories they need to commit.

It's to give them a chance to make five-year requirements contracts at prices and on terms that will give American farmers parity—that is, parity paid for by the only underwriters American agriculture can have or need worry about: Our grain-poor, cash-rich foreign customers.●

SENATOR GARN AND JUDICIAL REFORM

● Mr. LUGAR. Mr. President, I take this opportunity to call the attention of my colleagues to a letter to the editor. written by Senator JAKE GARN, which was printed in yesterday's Washington Post.

This letter is indicative of Senator GARN's vocal and consistent support for judicial reform.

The recent experiences of the Utah District Court have given each of us cause to contemplate change in our judicial system, and Senator GARN speaks from a most credible position when advising on this issue.

Mr. President, I request that Senator GARN's letter to the editor be printed here, immediately following my remarks.

On Sunday, April 23, 1978, the Washington Post published an article entitled, "What Can Be Done About Unfit Judges." The authors of this article, Clark Mollenhoff and Greg Rushford, have written an interesting and thoughtful piece. I request that the text of this article also be printed here in the RECORD.

The material follows:

ON REMOVING UNFIT JUDGES FROM THE FEDERAL BENCH

For several years I have been an outspoken critic of the late U.S. District Judge Willis W. Ritter and of the system and tradition of American jurisprudence that effectively insulates a federal judge from all complaints and any discipline. Without surrendering the critical concept of an independent judiciary, we must establish a system that allows for impartial review and, when necessary, censure of a sitting federal judge. The Judicial Tenure Act, now pending in the Senate Judiciary Committee, provides a system of discipline within the Judicial Branch itself and it is urgently needed. The article by Clark Mollenhoff and Greg Rushford ["What Can be Done About Unfit Judges?; Only Four Have Ever Been Removed From the Federal Bench," Outlook, April 23] provided some helpful background material on the general problem, and the Ritter problem in particular.

A few months before Judge Ritter's death in March of this year, the Department of Justice and the State of Utah both petitioned the Judicial Council of the Tenth Circuit for an order barring Judge Ritter from taking any further action in any criminal or civil action in which they were a party. Those petitions were without precedent, and they were the culmination of nearly three decades of turmoil in the District

Court for Utah. The petitions represented a non-partisan attempt to achieve a reasonable solution to a difficult situation in which few avenues of relief are available.

The problem with the proposed solution was that even if it had been granted it would have benefited those litigants who are best able to represent themselves in court. What about those litigants who do not have the resources of the Department of Justice or the State of Utah? Would they have been herded into Judge Ritter's court to fill the calendar dates opened when the Tenth Court granted the petitions of the United States and the state? If so, the individual litigant would have been appearing before a federal judge whom the Department of Justice had charged "conducts his business in a way that exceeds his authority and brings the federal courts into disrespect; neglects governing cases in the Tenth Circuit, has contempt for the judges of that court, and conducts his business in order to avoid appellate review of his decisions; and conducts the business of his court in a manner which has destroyed public confidence in his ability to administer justice" (*United States* v. *Ritter*, Petition for Writ of Mandamus or Prohibition).

I supported the filing of the writs because they were a significant and too-long delayed step toward equal justice, but the availability of this potential remedy is not adequate to the task of judicial discipline. As a cosponsor of the Judicial Tenure Act, I trust that it will be adequate.

In 1821 Thomas Jefferson wrote regarding the adoption of the Bill of Rights that an 11th amendment should have been proposed and that, in failing to do so, the new nation had sown the seeds of its destruction. Said Jefferson:

"But there was another amendment, of which none of us thought at the time, and in the omission of which, lurks the germ that is to destroy this happy combination of National powers in the General government, for matters of National concern, and independent powers in the States, for what concerns the States severally. . . . [A]nd, in the General government in this instance we have gone even beyond the English caution, by requiring a vote of two-thirds in one of the Houses, for removing a Judge; a vote so impossible, where any defence is made, before men of ordinary prejudices and passions, that our Judges are effectually independent of the nation. But this ought not to be. I would not, indeed, make them dependent on the Executive authority, as they formerly were in England; but I deem it indispensable to the continuance of this government, that they should be submitted to some practical and impartial control. . . ."

The Judicial Tenure Act provides the "practical and impartial" control that Jefferson hoped to see adopted. Once again, it would be prudent to follow his advice.

JAKE GARN,
U.S. Senator.

WASHINGTON.

WHAT CAN BE DONE ABOUT UNFIT JUDGES?—ONLY FOUR HAVE EVER BEEN REMOVED FROM THE FEDERAL BENCH

(By Clark Mollenhoff and Greg Rushford)

Late in the afternoon of Friday, Dec. 12, 1975, Chief Judge Willis W. Ritter of the U.S. District Court in Utah notified U.S. Attorney Ramon M. Child to be ready to try 23 criminal cases by the following Thursday.

It was an impossible order. Three of the first four cases were criminal tax prosecutions involving approximately 100 witnesses, many of whom lived outside Utah. Even if subpoenas could be prepared and served and the Christmas travel crush surmounted, an airline strike made it impossible to get the witnesses to Salt Lake City in time. Child asked for 21 more days to prepare.

But the judge refused, and for several weeks the frustrated U.S. attorney and his staff struggled to try the cases properly. Ritter dismissed four cases outright that Thursday morning because the government witnesses were not present.

These decisions were later reversed by the 10th U.S. Circuit Court of Appeals in Denver, which declared that Judge Ritter's behavior "was utterly unreasonable and constitutes a gross abuse of discretion." It was not the first unreasonable action by Ritter, whose controversial career spanned nearly three decades until his death last month. Nor is his case an isolated example.

While there is no reason to doubt the ability or integrity of the vast majority of our nearly 700 federal judges, some unquestionably are unfit to serve, whether because of abuses of power, misconduct, corruption, senility, alcoholism or other reasons. The problem is that it is impossible to remove such judges from the bench short of going through the cumbersome impeachment process.

Attorney General Griffin Bell, himself a U.S. circuit judge for more than 14 years, told a Senate Judiciary subcommittee last September that "there is an urgency" about the need to create a workable mechanism to remove unfit judges. "Not every judge who perhaps should be impeached can be impeached," Bell added. "Congress does not have that much time."

Presumably referring to several criminal investigations conducted by the Justice Department against federal judges in the past two years, Bell also said, "Not everyone who perhaps should be can be indicted. There are some things that judges might do that might cause me to think that they ought to be indicted. However, that is a serious business, particularly since you have got to indict somebody in their own court."

Testifying after Bell, John A. Sutro, chairman of the American Bar Association's standing committee on judicial selection, quoted a 10-year-old statement by Chief Justice Warren Burger, then a Court of Appeals judge, that "I would not presume to say how many United States judges now in active service are not physically able to perform their work adequately, but every observer knows there are more than a few." Sutro said Burger's assessment "unquestionably is true" today as well.

Bell and Sutro were both endorsing the judicial tenure bill which the Senate Judiciary Committee is expected to approve this spring. The legislation, sponsored by Democratic Sens. Sam Nunn of Georgia and Dennis DeConcini of Arizona, would create within the judiciary a commission to investigate complaints against federal judges, who are appointed for life, and it would also create a special court to hear cases of misconduct or inability to serve. The court could dismiss the complaint or censure, involuntarily retire or remove the judge from office.

Only nine federal judges in our history have been impeached, and only four have been convicted and removed from office, the last more than four decades ago. This is chiefly because the impeachment process is so cumbersome and time-consuming.

A House Judiciary Committee report in 1940 termed it a "governmental absurdity" when applied to a single judge. Last fall Democratic Rep. Robert W. Kastenmeier of Wisconsin, a leading Judiciary Committee sponsor of judicial tenure legislation, said that "although instances of judicial misconduct are often brought to our attention, the Judiciary Committee's heavy workload makes it difficult, if not impossible, for us to set aside all other legislative activity to conduct an impeachment inquiry."

Impeachment also carries political liabilities. Federal judges by tradition are appointed under the patronage of senators. The resulting close judicial ties to Congress, as former Maryland Sen. Joseph Tydings acknowledges, make dealing with the unfit judge "a very sticky political thicket." In past impeachment trials the final votes were often divided on partisan grounds.

A more fundamental and still-unresolved issue is the belief that an unfit judge still could be immune to impeachment. Harvard's Raoul Berger, a prominent impeachment authority, for example, contends that a judge may breach the constitutional "good behavior" standard by "abuse of office, neglect of duty, nonattendance and the like." But the constitutional grounds for impeachment are treason, bribery and "other high crimes and misdemeanors," a more exacting standard. Berger says that "while all high crimes and misdemeanors might constitute a breach of good behavior, not all breaches of good behavior amount to high crimes and misdemeanors."

RISING TO THE OCCASION

The career of Judge Ritter reveals how difficult it is to curtail even bizarre judicial conduct, or what Washington attorney and author Joseph Borkin has called the "morbid legal tradition" of not moving against unfit judges.

Ritter, a Phi Beta Kappa from the University of Chicago and Harvard, was a law professor when appointed to the bench in 1949 by President Truman. Ritter was a strong individualist who freqeuntly took the side of the "little guy" against the federal government.

From the moment he was appointed, Ritter became embroiled in squabbles. One of the more famous was his 1951 threat to jail a group of federal postal workers with whom the court shared office quarters; he was angered by their noisy elevators. Last year he ordered U.S. marshals to jail some noisy courthouse workers. But it was Ritter's injudicious attitude toward the law which became the most serious problem.

Salt Lake City lawyers who were friendly to Ritter almost always won the cases they tried in his court. One Utah attorney says that Ritter's "attitude toward justice was based on tremendous personal emotions. If he didn't like you, you would lose, and in effect be disbarred from representing clients in Utah. The only way justice was reached was when two lawyers appeared before Ritter and he liked them both; then he would rise to the occasion."

Over the years the 10th Circuit Court in Denver fought Ritter's excesses by reversing many of his decisions. The circuit's Judicial Council took control of the assignment of cases in Ritter's court. (Each of the nation's 11 regional judicial circuits has a council headed by the chief judge and empowered to supervise court administration).

But Ritter continued to try cases, and his conduct became a Utah scandal. By the late 1960s U.S. attorneys and their staffs were in frequent contact with the Justice Department "about the Ritter problem," says a former prosecutor. "But we learned how reluctant Washington is when discussing legal moves against a federal judge. We were always told to try to live with the situation."

After the 1975 Christmas trial episode, U.S. Attorney Child urged the Justice Department to file a petition with the 10th Circuit Court to bar Ritter from trying federal cases. But the Ford Justice Department did not approve such a strong step.

In the meantime, the Ritter problem intensified. In 1976 Ritter didn't wait until Christmas. For eight months prior to October he set no criminal cases for trial. Then, on Oct. 5, he scheduled 50 trials beginning four days later. When Child obtained an order from the Judicial Council directing Ritter to schedule trials with at least 15 days' notice, the judge held no criminal trials at all for the first six months in 1977.

"ARBITRARY AND ERRATIC AUTHORITY"

Finally, Washington agreed with Child that piecemeal methods would no longer contain Ritter. Solicitor General Wade H. McCree, a former 6th Circuit judge from Detroit, painted a damning portrait of Ritter last July in a six-page letter to the 10th Circuit's chief judge, David T. Lewis.

The solicitor general stated bluntly that for 28 years Judge Ritter's conduct had been "inimical to the standards of judicial conduct that ought to be observed." Step-by-step countermeasures, McCree said, "cannot be truly effective so long as Judge Ritter continues to exercise arbitrary and erratic authority in individual cases. The power of a trial judge is too great and the opportunities for abuse of that power too frequent to allow effective appellate supervision in the run of cases."

McCree told Judge Lewis that Ritter had "paralyzed" the administration of criminal justice, and said he would petition Lewis for a writ of mandamus to bar Ritter's participation in any federal cases. But in a paragraph reflecting the legal establishment's sensitivities, McCree wrote:

"I have deferred authorizing the filing of these formal requests, however, because I am concerned that the publicity attendant on requests might go far toward bringing the administration of justice into disrepute. They would publish, for the world to see, a story of judicial indiscretion that ought not lightly be broadcast, and the attendant publicity would place both the court of appeals (in passing upon the requests) and the Department of Justice (in presenting them) in unfortunate positions: any legal action, for any reason, would be a subject for public scrutiny and to questions about motivation."

The solicitor general told Judge Lewis an experience from his service on the 6th Circuit. A judge's behavior, although "not by any stretch of the imagination as improper" as Ritter's, became intolerable. The circuit's chief judge, after consulting with his fellow judges, "approached the district judge informally" and asked him to step down "before it was necessary to institute public proceedings that could only hurt his reputation and stature in the community." The offending judge retired.

McCree asked Lewis to consider applying similar pressure on Ritter. But Lewis made no such attempt because he felt it would be fruitless.

Finally, on Oct. 5, 1977, McCree and Child petitioned the 10th Circuit to remove Ritter from all federal cases. Ritter died March 4 while the 10th Circuit was considering the petition.

JUSTICE DEPARTMENT INVESTIGATIONS

Before Ritter's death, the Justice Department also had investigated whether he had defrauded the government. For four months in 1974 Vickey Jolley, Judge Ritter's clerk and secretary, allegedly was absent from work following an auto accident, but Ritter instructed the clerk of the court to continue paying her full salary. For another six weeks in 1975, and at various unknown times since 1970, Jolley allegedly was absent from work but continued to receive her full salary.

The Justice Department dropped this aspect of the investigation for lack of evidence directly inculpating Judge Ritter. Child complained that the investigation wasn't aggressive enough, and he later stepped down as U.S. attorney to practice law in Salt Lake City.

At least three other federal judges have been investigated by the Justice Department in the past two years.

In one case a cloud over the judge's reputation was removed only because he himself requested the investigation. Robert E. Varner, 56, a former Montgomery, Ala., bar association president, was appointed to the federal bench in 1971 by President Nixon. Varner was suspected of judicial misconduct amounting to bribery. The allegation stemmed from a four-year probation sentence Varner imposed on James Payton Judge III who pleaded guilty to interstate transportation of stolen property. Before the sentencing Judge Varner had purchased 630 acres of land at $300 an acre from the defendant's great-aunt. After questions were raised in the Alabama press about whether the lenient sentence was in exchange for the land deal, Varner asked the 5th Circuit Judicial Council in New Orleans to investigate.

On June 10, 1976, the council issued a report criticizing Varner for not having stepped down in the case. But it found the charges of misconduct "groundless," even though the land price was "possibly favorable." The council noted that there was no evidence of collusion and that the relationship between the offender and his great-aunt was distant. Moreover, federal prosecutors had recommended the sentence of probation. That recommendation appeared "thoroughly responsible, and made probation the advisable and likely sentence," the council said.

The Justice Department agreed and did not seek to indict Varner.

No official acknowledgment has been made that John V. Singleton Jr. was even investigated or why. Singleton, 60, a Houston lawyer and longtime associate of John Connally, was appointed by President Johnson in 1966 to the Southern District of Texas in Houston.

A Houston television station reported on June 9, 1977, that a federal grand jury was "believed to be looking into allegations concerning" Singleton, and that "apparently this grand jury has been investigating banking matters involving Judge Singleton for some time." Justice Department sources confirmed that Singleton had testified before the grand jury but refused to elaborate on the nature of the testimony or to confirm reports that the department had sought an indictment.

The Singleton case raises important questions. Singleton's rulings have often angered Justice Department officials. In 1970, for instance, Organized Crime Strike Force officials were upset when the judge reduced a two-year prison term for New Orleans mobster Carlos Marcello, who had assaulted an FBI agent, to six months. Is the judge the target of a vendetta by unknown Justice officials who simply resent his liberal (by Texas standards) record?

When a judge is accused of some conduct serious enough to justify calling him before a grand jury, should there be a public explanation? If the suspected conduct was not indictable, should the Justice Department have notified the House Judiciary Committee of possible misconduct which might violate the constitutional "good behavior" standard? The committee has not been so notified.

Judge Singleton has declined to comment.

THE SPEEDY CONFIRMATION

Another federal judge known to have been the subject of a Justice Department criminal investigation is Herbert A. Fogel, 48, a former political fundraiser and Philadelphia law partner of former Senate minority leader Hugh Scott. Fogel was appointed to the Eastern District of Pennsylvania in 1973 by President Nixon.

He was investigated for his actions as a private attorney before his appointment to the bench, and his case raises serious questions about the judicial confirmation process.

Fogel was the lawyer for and part owner of the Gateway Corp., which won a controversial February 1971 contract from the General Services Administration. The contract was worth $78 million for 30 years' rent to federal offices in a Gateway building in West Philadelphia.

Because Gateway's winning bid was $27 million higher than the lowest bid submitted to GSA, and because key GSA officials were also close to former Sen. Scott, the contract raised eyebrows. In March 1972, the General Accounting Office, Congress' watchdog, reported the award had been "improper" because Gateway had failed to comply with various criteria in its bid submission.

Despite widespread publicity surrounding the Gateway case, the Senate Judiciary Committee confirmed Fogel in a routine 10-minute hearing in February 1973. Republican Sen. Roman Hruska of Nebraska, who chaired the hearing, asked Fogel no questions about Gateway. The only other senators present were Pennsylvania's Richard Schweiker and Scott, who took up most of the 10 minutes with effusive praise of the nominee.

But a civil lawsuit brought by a losing bidder, John W. Merriam, brought out additional facts about Gateway. Judge Fogel admitted in a sworn deposition that he had backdated documents submitted to GSA, and Justice launched a criminal investigation in 1975, Although the exact date is still obscured in secret grand jury proceedings, sometime in late 1975 or early 1976 Fogel refused to cooperate with a grand jury by invoking his Fifth Amendment rights against self-incrimination.

The Justice Department dropped the investigation in 1976, but the Carter administration revived it last year. Attorney General Bell wrote Rep. Allen Ertel of Pennsylvania on Oct. 19 that he was reviewing the evidence to see if the case should be referred to the House Judiciary Committee for impeachment proceedings or "other possible alternatives."

Bell never referred the case to the committee, and he will not comment on what he meant by "other possible alternatives." But on Jan. 20 Fogel announced his resignation, effective May 1. The announcement came eight days after two former Philadelphia policemen who were convicted of robbery filed a petition in federal court accusing Fogel and two other federal judges of being "owned" and on their lawyer's "payroll." Those charges are currently under investigation.

UNEXAMINED COMPLAINTS

Each year dozens of complaints against federal judges go unexamined for lack of an appropriate investigative mechanism.

Judicial councils in the regional federal circuits have no investigative staffs and are not capable of dealing with complex cases. Although a review committee established by the policy-making Judicial Conference of the United States has been diligent and effective in resolving simpler conflict-of-interest and ethical questions, it too is not equipped to deal with difficult cases.

Nor is the Supreme Court able to police the federal judiciary, as illustrated by one 1976 complaint lodged with it by a Pennsylvania businessman named John A. Nard. Nard complained about alleged political corruption by several federal judges in Pennsylvania, but Supreme Court Clerk Michael Rodak Jr. replied: "I regret to inform you that this court has no authority to institute or conduct investigations as mentioned in your letter. Neither can we suggest an investigative body."

It is precisely such mechanism that would be set up by the pending judicial tenure legislation, which has also been endorsed in principle by the Judicial Conference. Indeed, the value of such procedure has already been demonstrated at the state level. Since adopting such legislation in 1961, California has become the model for over 44 state judicial tenure commissions. Rather than face formal hearings, 67 California judges have resigned since 1961. Five others have been censured by the California Supreme Court, and three more have been removed from office.●

PROPOSED ARMS SALES

● Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask to have printed in the RECORD at this point the two notifications I have just received.

The notifications follow:

WASHINGTON, D.C., *April 25, 1978.*

In reply refer to: I-2200/78ct.

Hon. JOHN J. SPARKMAN,

Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78-37, concerning the Department of the Air Force's proposed Letter of Offer to Sudan for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $65.8 million and support costs of $5.2 million for a total estimated cost of $71 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
Acting Director, Defense Security Assistance Agency.

[Transmittal No. 78-37]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Sudan.

(ii) Total Estimated Value:

	Millions
Major Defense Equipment*	$65.8
Other	5.2
Total	71.0

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Six (6) AN/TPS-43E air defense radar sets and associated communications equipment.

(iv) Military Department: Air Force.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: April 25, 1978.

WASHINGTON, D.C.,
April 28, 1978.

In reply refer to: I-11131/77ct.

Hon. JOHN J. SPARKMAN,

Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78-36, concerning the Department of the Navy's proposed Letter of Offer to Pakistan for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $8.4 million and support costs of $1.1 million for a total estimated cost of $9.5 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
Acting Director, Defense Security Assistance Agency.

[Transmittal No. 78-36]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Pakistan.

(ii) Total Estimated Value:

	Millions
Major Defense Equipment*	$8.4
Other	1.1
Total	9.5

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Forty (40) anti-submarine missiles with MK-46 mod 2 torpedo payloads, eight (8) anti-submarine exercise missiles with MK-46 mod 2 torpedo payload and support equipment.

(iv) Military Department: Navy.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: April 28, 1978.●

PROPOSED ARMS SALES

● Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask to have printed in the RECORD at this point the four notifications I have just received.

The notifications follow:

DEFENSE SECURITY
ASSISTANCE AGENCY,
Washington, D.C., April 28, 1978.

In reply refer to: I-1224/78ct.

Hon. JOHN J. SPARKMAN,

Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78-32, concerning the United States Government's proposed Letter of Offer to Egypt for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $431.3 million and support costs of $158.7 million for a total estimated cost of $590.0 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
Acting Director, Defense Security Assistance Agency.

[Transmittal No. 78-32]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Egypt.

(ii) Total Estimated Value:

[In millions]

Major Defense Equipment*	$431.3
Other	158.7
Total	590.0

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Forty two (42) F5E and eight (8) F5F aircraft, spare parts, associated munitions, including AIM 9J air-to-air missiles, training and follow-on support.

(iv) Military Department: Air Force.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: April 28, 1978.

POLICY JUSTIFICATION

EGYPT—50 F-5 AIRCRAFT

Active and positive Egyptian participation is a *sine qua non* if progress is to be achieved in the search for a peaceful settlement of the Arab-Israeli dispute. In his bold visit to Jerusalem, President Sadat sought to break through barriers which long had impeded movement on these issues. The opening of a direct dialogue was a major accomplishment. It was not, however, without its cost in terms of Arab support for the Sadat regime. To date, the Egyptian Government has been strongly opposed by a number of Arab governments while garnering quiet support from a few.

Egypt must have reasonable assurance of its ability to defend itself if it is to continue the peace negotiations with confidence. When President Sadat made his decision several years ago to follow a course in foreign affairs that involved a change in his country's relations with the Soviet Union, he lost his major source of military equipment. This was particularly the case in Egyptian aircraft capability. We have a basic interest in our support of the peace process to respond to Egypt's legitimate requirement for the air defense aircraft.

The ability of President Sadat to sustain his peacemaking initiative and drive for a peaceful settlement with Israel is related directly and significantly to the maintenance of a credible defense capability. The present Egyptian arsenal is largely of Soviet manufacture. It is increasingly obsolescent and poorly maintained as a result of the extended Soviet embargo placed on military supplies to Egypt. Since 1975 Egypt has received only limited supplies from the USSR. The Egyptian need for reliable alternate sources of supply is critical.

The Egyptian MIG fleet—the backbone of the Air Force at present—faces serious problems notwithstanding technical assistance from some Western countries. Some of the aircraft have reached the limits of their structural life while others can no longer be maintained adequately in the absence of Soviet spare parts and support. Egyptian government planning must look to replacement of these aircraft over the next few years. Provision of the F-5E/F, thus, will sustain Egyptian air defense capabilities without affecting to any extent the essential arms balance in the region.

The proposed sale of 42 F-5E fighters and 8 F-5F two-seat trainers provides a reliable, easily maintainable modern aircraft designed with simplicity of operation and minimum support in mind. The F-5, however, is roughly comparable to the MIG-21 in Egypt's inven-

tory and thus its sale would not introduce significant new qualitative capabilities.

The F–5E is designed to operate primarily as an air superiority fighter for local air defense in a clear air mass environment. A secondary role is that of close air support of ground forces also within range limitations. It does not possess an all-weather or night fighting capability.

The total package of 50 aircraft, associated munitions, ground support equipment and spare parts as well as contractor maintenance and supply support will cost an estimated $590 million. It is anticipated that initially a ten-man US government contingent will be required for project management in connection with the sale. An additional 30 to 120 contractor personnel will be needed for technical services, maintenance augmentation and training.

Introduction of the aircraft would begin in the third quarter CY 1978, followed by deliveries through CY 1981. The number of U.S. personnel directly involved in Egypt will be reduced as the Egyptians gain experience in operating and maintaining the aircraft.

Upon that government's signing the required letter of offer related to this proposed sale, the value of this transaction will count toward the Administration's worldwide arms transfer ceiling in the year in which the LOA is accepted.

A. A detailed description of the defense articles or services to be offered, including a brief description of the capabilities of any defense article to be offered:

The F–5 is a twin engine supersonic tactical fighter aircraft with design emphasis on the air superiority role and secondary capability in the air-to-ground role. The F–5E is a single seat version and the F–5F is a dual seat version which also serves in the training role. The aircraft is capable of firing the 20mm gun, 2.75 inch rocket, the AIM–9 Sidewinder missile, or delivery of up to 7,000 lbs in a combination of rockets, missiles, and conventional bombs. The proposed sale will include additional spare engines, support equipment, spare parts, aircraft delivery, training, and technical support services.

B. An estimate of the number of officers and employees of the United States Government and of United States civilian contract personnel expected to be needed in such country to carry out the proposed sale:

Subject to the findings of a site survey to define precisely what requirements exist, it is anticipated that a ten-man contingent of U.S. Government personnel will be required in Egypt for management and USAF interface in conjunction with this sale. Additionally, U.S. contractor personnel will be required in Egypt to support this sale. These personnel will include moderate numbers (30–120) of technicians competent in the fields of engineering technical services, maintenance, and training.

C. The name of each contractor expected to provide the defense article or defense service proposed to be sold (if known on the date of transmittal of such report):

The prime contractor for the F–5 aircraft is the Northrop Aircraft Division (NAD) of the Northrop Corporation. The majority of articles and services to be provided will be furnished by NAD.

D. An analysis of the arms control impact pertinent to such offer to sell, prepared, in consultation with the Secretary of Defense.

The sale of 50 F–5Es to Egypt is not likely to disrupt the military balance in the Middle East. The proposed package includes nearly twice as many aircraft of more advanced types for Israel, so that Israel's capability to defend itself successfully against any foreseeable threat is likely to be maintained. The primary military impact of the sale will be to bolster Egyptian air defense capability, which has steadily deteriorated since the virtual cessation of Soviet arms and spare parts deliveries in early 1975. Because the F–5 is a relatively short-range interceptor which can carry only relatively small payloads, it does not represent a serious offensive threat against Israel.

On the negative side, regardless of this assessment, Israel is likely to consider the sale of F–5Es a threat to its security. As such, the sale would contribute to existing stimuli for additional Israeli aircraft acquisitions, and perhaps place new pressure against our policy of arms transfer restraint.

Moderate numbers of U.S. government and contractor personnel people will be required in-country for an extended period for technical services, training, maintenance augmentation, and project management. These people would be added to the 2 USAF and 3 contractor personnel currently involved in the C–130 program, and only very slightly to the 4,000 other Americans already in Egypt.

It is clearly in the U.S. interest, and a positive step toward arms control, to maintain the confidence of Egypt in our support, thereby enabling President Sadat to continue moving toward a peace settlement. The sale of F–5Es seems likely to contribute to maintaining close U.S. Egyptian ties and thus, on balance, appears warranted.

E. The reasons why the foreign country or international organization to which the sale is proposed to be made needs the defense articles or services which are the subject of such sale and a description of how such country or organization intends to use such defense articles or services:

In 1972, President Sadat ordered the withdrawal from Egypt of the very sizeable contingent of Soviet military advisers and technicians. As previously close military ties between Moscow and Cairo continued to cool, the Soviets made it progressively more difficult for the Egyptians to obtain military equipment and supplies. Eventually, even the trickle of spare parts for Soviet-built items in the Egyptian arsenal was terminated. According to our best information, no significant shipments of Soviet military items have reached Egypt for almost three years. Since the Egyptian Armed Forces still are equipped primarily with U.S.S.R.-manufactured items, the Soviet embargo has been particularly troublesome for the Sadat Government. Although the Egyptians have met with some success in establishing alternate sources of supply, principally from Western European firms and governments, the deterioration of the Egyptian arsenal has not been arrested.

The Egyptian government has a legitimate need to maintain an adequate defensive capability. Although relatively quiescent in military terms at present, Egyptian-Libyan tensions persist. There was an open clash between the two governments in late summer, 1977. In addition to this direct threat from the Qadhafi government, President Sadat is deeply concerned about Libyan and communist supported threats to moderate regimes in Africa, such as in Chad and Somalia. He is particularly sensitive to any potential hostile control over the headwaters of the Nile.

F. An analysis by the President of the impact of the proposed sale on the military stocks and the military preparedness of the United States:

None. The aircraft, other than two F–5Fs, will be provided from production. The two F–5Fs identified in USAF inventory are dedicated primarily to training of foreign students. Therefore, there will be negligible impact on U.S. force readiness.

G. The reasons why the proposed sale is in the national interest of the United States:

Egypt must have reasonable assurance of its ability to defend itself if it is to continue the peace negotiations with confidence. When President Sadat made his decision several years ago to follow a course in foreign affairs that involved a change in his country's relations with the Soviet Union, he lost his major source of military equipment. This was particularly the case in Egyptian aircraft capability. We have a basic interest in our support of the peace progress to respond to Egypt's legitimate requirement for air defense aircraft.

H. An analysis by the President of the impact of the proposed sale on military capabilities of the foreign country or international organization to which such sale would be made:

The acquisition of 50 F–5 aircraft by the EAF will not materially affect the military capabilities of Egypt because the aircraft will serve only as partial offset to aged or unsupportable Soviet-design aircraft that must be retired from service, due to safety or operational considerations.

I. An analysis by the President of how the proposed sale would affect the relative military strengths of countries in the region to which the defense articles or services which are the subject of such sale would be delivered and whether other countries in the region has comparable kinds and amounts of defense articles or services:

The proposed sale of 50 F–5 aircraft to Egypt will not materially affect the military balance in the region—but will serve only to decrease the erosion of Egyptian air power in that the aircraft will replace current aircraft in the inventory that must be retired, either due to age, material condition, or lack of support.

J. An estimate of the levels of trained personnel and maintenance facilities of the foreign country or international organization to which the sale would be made which are needed and available to utilize effectively the defense articles or services proposed to be sold:

This information would be developed through an in-country site survey conducted by an USAF team.

K. An analysis of the extent to which comparable kinds and amounts of defense articles or services are available from other countries:

Comparable aircraft are manufactured in Western European and Communist nations. Egypt could procure aircraft from such sources.

L. An analysis of the impact of the proposed sale on United States relations with the countries in the region to which the defense articles or services which are the subject of such sale would be delivered:

The proposed sale of F–5E's to Egypt will not materially alter the military balance in the area. The Israeli Government has expressed opposition to the proposed sale. However, President Sadat repeatedly has stated his pledge not to go to war again with Israel; he specifically has announced, during his recent visit to Washington, that the F–5E's will not be used against Israel.

Although we have not had specific reactions from other governments in the area to the proposed sales, we anticipate that most Arab governments welcome this program. On balance, it will be interpreted as strong evidence of USG support for the Sadat government, especially in the context of the direct Egyptian/Israeli dialogue.

M. A detailed description of any agreement proposed to be entered into by the United States for the purchase or acquisition by the United States of defense articles, services, or equipment or other articles, services, or equipment of the foreign country or international organization in connection with, or as consideration for, such letter of offer, including an analysis of the impact of such proposed agreement upon United States business concerns which might otherwise have provided such articles, services, or equipment to the United States, an estimate of the costs to be incurred by the United States in connection with such agreement compared with costs which would otherwise

have been incurred, an estimate of the economic impact and unemployment which would result from entering into such proposed agreement, and an analysis of whether such costs and such domestic economic impact justify entering into such proposed agreement.

Not applicable.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., April 28, 1978.

In reply refer to: I-1225/78ct

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78-33, concerning the United States Government's proposed Letter of Offer to Israel for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $283.2 million and support costs of $147.5 million for a total estimated cost of $430.7 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
Acting Director,
Defense Security Assistance Agency.

[Transmittal No. 78-33]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Israel.

(ii) Total Estimated Value:

[In millions]

Major Defense Equipment*	$283.2
Other	147.5
Total	430.7

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Fifteen (15) F-15 aircraft plus support equipment and spare parts.

(iv) Military Department: Air Force.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: 28 April 1978.

POLICY JUSTIFICATION

ISRAEL—15 F-15 AIRCRAFT

The proposed sale is a part of the long-standing military supply relationship that exists between Israel and the United States. Our assistance to Israel is a direct expression of our strong commitment to the preservation of Israel's security and survival. This has been a principle of American Middle East policy through all Administrations since Israel's inception in 1948. Related to that commitment, and to our interests in maintaining good relations in the Arab world, is a fundamental American interest in promoting a negotiated peace in the area.

The F-15 is a highly reliable and maintainable single-place, fixed wing, MACH 2.5 class, twin engine aircraft designed specifically as an air superiority fighter with a secondary air-to-ground mission. It combines advanced radar, fire control, and electronic countermeasure systems with an optimum mix of air-to-air missiles (4 SPARROW and 4 SIDEWINDER) and a 20mm cannon for use in air-to-air engagements. Configuration will be standardized with previous F-15s sold to Israel.

Israel has already purchased 25 F-15 aircraft: 4 development, test and evaluation modified aircraft, 2 TF-15-A trainers and 19 F-15-A production aircraft; 9 of which have been delivered with deliveries of 2 or 3 a month currently taking place. As of mid-November 1977, eleven IAF pilots had been checked out in the single-seat fighter, including Air Force Commander General David Ivri.

This proposed sale valued at $430.7 million will provide Israel with 15 additional F-15 aircraft tentatively to be delivered in FY 1981 and FY 1982. Estimated costs include aircraft, concurrent spare parts, ground support equipment, contractor maintenance and supply support. Savings are achieved by add-on to the already established aircraft program in-country. Israel has sufficient munitions on hand, on order or planned for procurement.

The acquisition of these aircraft is not expected to require substantial additional training, or numbers of U.S. Government or contractor personnel in-country. However, a continuation of existing arrangements may be required.

No adverse effect on U.S. Air Force readiness will result as these aircraft will come from normal procurement and production without impact on U.S. Forces requirements and within normal lead times.

Upon that government's signing the required letter of offer related to their proposed sale the value of this transaction will count toward the Administration's worldwide arms transfer ceiling in the year in which the LOA is accepted.

A detailed description of the defense articles or services to be offered, including a brief description of the capabilities of any defense article to be offered:

Fifteen F-15C aircraft with spares, support equipment, two flight simulators, technical data, training of pilots and technicians in the U.S. and aircraft delivery will be offered to the Government of Israel. Concurrent with in-country delivery of the aircraft, supply support will be provided.

The F-15C is a single crew, high performance, supersonic, all-weather air superiority fighter. Its primary mission is aerial combat, but it also has a limited capability for air-to-surface missions. Radar and heat-seeking air-to-air missiles and a 20 mm gun are the primary armament. The aircraft is powered by two turbofan engines.

B. An estimate of the number of officers and employees of the United States Government and of United States civilian contract personnel expected to be needed in such country to carry out the proposed sale:

a. One USAF employee will be required for three years to serve as a Weapon System Logistic Officer.

b. Approximately 15 man years of contractor engineering technical services will be required.

C. The name of each contractor expected to provide the defense article or defense service proposed to be sold (if known on the date of transmittal of such report):

Aircraft: McDonnell Douglas Corporation.

F-100 Engine: Pratt and Whitney.

D. An analysis of the arms control impact pertinent to such offer to sell, prepared, in consultation with the Secretary of Defense:

From an arms control perspective, the proposed transfer of 15 additional F-15 fighter aircraft to Israel would pose some concern in that it could increase the demands from other states in the area for comparable advanced aircraft. However, this transfer by itself would not disturb the military balance in the area. By providing more of its most advanced interceptors, the U.S. is demonstrating the unfailing support for Israel that is vital to sustaining negotiations toward a durable peace settlement.

It is not anticipated that any additional U.S. Government or contractor personnel would be needed in-country because of this sale. On balance, the factors favoring the sale would seem to outweigh the arms control concerns mentioned above.

E. The reasons why the foreign country or international organization to which the sale is proposed to be made needs the defense articles or services which are the subject to such sale and a description of how such country or organization intends to use such defense articles or services:

Between now and 1983, Israel should replace some combat aircraft due to attrition. This could involve a few F-4 and A-4 aircraft and a larger portion of the on-hand inventory of Mirage III and V aircraft. Israel will be able to compensate partially for this attrition through indigenous production of the KFIR C2.

F. An analysis by the President of the impact of the proposed sale on the military stocks and the military preparedness of the United States:

None. The aircraft would be provided from production on a noninterference basis.

G. The reasons why the proposed sale is in the national interest of the United States:

This sale will contribute to U.S. interest in promoting peace and stability in the Mideast and in fulfilling our historic responsibilities regarding Israel's security.

H. An analysis by the President of the impact of the proposed sale on the military capabilities of the foreign country or international organization to which such sale would be made:

These 15 F-15s will supplement the air defense capabilities of the 25 F-15s already purchased and now being delivered.

1. An analysis by the President of how the proposed sale would affect the relative military strengths of countries in the region to which the defense articles or services which are the subject of such sale would be delivered and whether other countries in the region have comparable kinds and amounts of defense articles or services:

Provision of 15 F-15 and 75 F-16 aircraft to Israel through the 3rd Quarter 1983 is not expected to materially change the relative military strengths in the region. As previously noted, Israel realistically should replace obsolescent aircraft. Other countries in the region are expected to possess comparable aircraft in similar amounts during 1983; specifically MIG-23, MIG-25, MIRAGE F1 and JAGUAR aircraft.

J. An estimate of the levels of trained personnel and maintenance facilities of the foreign country or international organization to which the sale would be made which are needed and available to utilize effectively the defense articles or services proposed to be sold:

Israel will have completed all aircrew and maintenance training required to operate and maintan the F-15 aircraft by 1980. This training is being accomplished under the earlier sale of 25 F-15 aircraft. Minimal additional maintenance training at the organizational and intermediate level may be required to supplement acquisition of additional aircraft.

K. An analysis of the extent to which comparable kinds and amounts of defense articles or services are available from other countries:

Comparable aircraft are manufactured in Western European nations and the Soviet Union.

L. An analysis of the impact of the proposed sale on United States relations with the countries in the region to which the defense articles or services which are the subject of such sale would be delivered:

Although Israel's Arab neighbors object to the sale of these advanced fighters to Israel, they recognize the special responsibilities

the U.S. has with regard to Israel. U.S. relations with the neighboring Arab states are therefore unlikely to be significantly affected.

M. A detailed description of any agreement proposed to be entered into by the United States for the purchase or acquisition by the United States of defense articles, services, or equipment, or other articles, services, or equipment of the foreign country or international organization in connection with, or as consideration for, such letter of offer, including an analysis of the impact of such proposed agreement upon United States business concerns which might otherwise have provided such articles, services, or equipment to the United States, an estimate of the costs to be incurred with costs which would otherwise have been incurred, an estimate of the economic impact and unemployment which would result from entering into such proposed agreement, and an analysis of whether such costs and such domestic economic impact would justify entering into such proposed agreement:

Not applicable.

ERIC F. VON MARBOD,
Acting Director,
Defense Security Assistance Agency.

[Transmittal No. 78-34]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Israel.

(ii) Total Estimated Value:

[In millions]

Major Defense Equipment*	$925.4
Other	593.1
Total	$1,518.5

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulation (ITAR).

(iii) Description of Articles or Services Offered: Seventy five (75) F16 aircraft, spare parts, ground support equipment and follow-on support.

(iv) Military Department: Air Force.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: April 28, 1978.

POLICY JUSTIFICATION

ISRAEL—75 F-15 AIRCRAFT

As a firm friend and supporter of Israel's security, the United States has for many years supplied Israel with the arms necessary to preserve its territorial integrity and to protect its people. On February 14, we announced our intention to sell to Israel 75 F-16 aircraft. These aircraft, together with the sale of 15 F-15 aircraft announced at the same time, will maintain Israel's military superiority in the region and should contribute to the sense of security Israel requires to continue with confidence negotiations for a peaceful solution to the Arab-Israel dispute. Promotion of the peace process is a fundamental US interest.

This sale, together with the F-15 sale to Israel and aircraft sales to Saudi Arabia and Egypt, will not alter the basic regional arms balance in the Middle East.

The F-16A is a single seat, single engine, advanced lightweight, all-weather, multipurpose fighter incorporating modern technology features that increase total system performance. It was designed to permit high sortie rates with a rapid turnaround capability, minimum manpower and logistics requirements, and an exceptional air combat maneuvering performance along with a good air-to-surface weapons delivery capability. The F-16B is a two place version of the A model. Internal armament consists of a 20-mm cannot with 500 rounds of ammunition, and there are nine external armament stations for carrying a wide variety of missiles, bombs and dispensers. The centerline weapons stations can also carry a 300 gallon fuel tank, and 600 gallon or 370 gallon tanks can be carried on the wing inboard stations.

This proposed sale is valued at $1.5 billion. The aircraft will be delivered during FY 1983, providing Israel with 3 squadrons of modern aircraft that will enable Israel to maintain its air superiority in the Middle East environment.

The aircraft will provide that portion of the air-to-air combat mission which requires higher performance than that of the F-4 (US) and Israeli produced KFIR aircraft currently in the inventory or in production for the Israeli Air Force (IAF). Acquisition of the F-16 will maintain the military advantage the IAF currently has into the 1990's.

U.S. technical personnel will be required to support the F-16 in-country as follows:

(1) Two Weapons Systems Logistics Officers for three years (six man years).

(2) Twenty-four man years contractor engineering technical services. No adverse effect on U.S. Air Force readiness should result as these aircraft will come from normal procurement and production without impact on U.S. Forces requirements and within normal lead times.

Upon that government's signing the required letter of offer related to this proposed sale, the value of this transaction will count toward the administration's worldwide arms transfer ceiling in the year in which the LOA is accepted.

A. A detailed description of the defense articles or services to be offered, including a brief description of the capabilities of any defense article to be offered:

The F-16A is a single seat, single engine, high performance, all weather, multi-purpose fighter incorporating advanced technology features which significantly increase total system performance. It was designed to permit high sortie rates with a rapid turnaround capability, minimum manpower and logistics requirements, and an exceptional air combat maneuvering performance along with a good air-to-surface weapons delivery capability. The F-16B is a two seat version of the A model. Thrust is provided by a single F-100-PW-100 twin spool turbofan engine with afterburner. Internal armament consists of a 20 mm cannon with 500 rounds of ammunition, and there are nine external armament stations for carrying a wide variety of missiles, bombs, and dispensers. The centerline weapons stations can carry a 300 gallon fuel tank and 370 gallon tanks can be carried on the wing inboard stations. The proposed sale includes spare engines, support equipment, system spares, necessary technical support services, training, and aircraft delivery.

B. An estimate of the number of offices and employees of the United States Government and of United States civilian contract personnel expected to be needed in such country to carry out the proposed sale:

a. Two Weapon System Logistics Officers for three years (six man years).

b. Twenty-four man years contractor engineering technical services.

C. The name of each contractor expected to provide the defense article or defense service proposed to be sold (if known on the date of transmittal of such report):

Major Contractor: General Dynamics

Engine: Pratt and Whitney

D. An analysis of the arms control impact pertinent to such offer to sell, prepared, in consultation with the Secretary of Defense:

From the arms control perspective, the sale of 75 F-16 fighter aircraft to Israel would pose some concern in that it could contribute to demands from other countries for additional aircraft, thus adding to the general pressure against restraint. However, the aircraft is well suited to Israeli defense needs, and the number involved would not disrupt the military balance in the area. Moreover, this transaction would help to demonstrate the unfailing US support for Israel that is vital to sustaining negotiations toward a durable peace settlement.

About a half dozen USAF and contractor personnel would be required in-country for a few years to assist in introduction of this aircraft into the Israeli inventory. This will have no significant arms control impact.

On balance, the factors favoring the sale would seem to outweigh the arms control concerns mentioned above.

E. The reasons why the foreign country or international organization to which the sale is proposed to be made needs the defense articles or services which are the subject of such sale and a description of how such country or organization intends to use such defense articles or services:

These aircraft (75 F-16s) are intended to provide Israel with an improved capability to undertake interdiction missions. They are very effective in locating and destroying ground targets and can carry a heavy armament load for this purpose. In addition to augmenting Israel's air-to-air capability, Israel will likely employ the aircraft to identify and attack hostile forces before they have a chance to pose a threat to its home territory in the event of war.

F. An analysis by the President of the impact of the proposed sale on the military stocks and the military preparedness of the United States.

None. The aircraft would be provided from production on a noninterference basis with USAF and EPG deliveries. Initial training for the F-16 will be conducted in CONUS supported by Israeli aircraft and spares.

G. The reasons why the proposed sale is in the national interest of the United States:

This sale will contribute to US interest in promoting peace and stability in the Mideast and in fulfilling our historic responsibilities regarding Israel's security.

H. An analysis by the President of the impact of the proposed sale on the military capabilities of the foreign country or international organization to which such sale would be made:

The qualitative superiority of the Israeli Air Force has always been a major factor in its overall combat superiority. Israel is likely to retain, and perhaps expand, this margin of superiority over the next five years with the receipt of additional F-15 and F-16 fighters. Even though some of the A-4s and F-4s in the inventory will have been in service for over a decade by the early 1980s, Israel's highly innovative equipment modifications and maintenance capabilities will permit them to remain a viable part of the force.

The combat effectiveness of the Israeli Air Force will be further improved by the continued acquisition from the US of advanced air-to-air and air-to-ground missiles, precision-guided munitions, and electronic countermeasure systems. This technology should significantly improve the air force's capability to suppress Arab air defense systems, conduct interdiction raids, and maintain air superiority.

I. An analysis by the President of how the proposed sale would affect the relative military strengths of countries in the region to which the defense articles or services which are the subject of such sale would be delivered and whether other countries in the region have comparable kinds and amounts of defense articles or services:

Provision of 15 F–15 and 75 F–16 aircraft to Israel through the 3rd Quarter 1983 is not expected to materially change the relative military strengths in the region. Other countries in the region are expected to possess comparable aircraft in similar amounts during 1983; specifically MIG–23, MIG–25, SU–20, MIRAGE F1 and JAGUAR aircraft.

J. An estimate of the levels of trained personnel and maintenance facilities of the foreign country or international organization to which the sale would be made which are needed and available to utilize effectively the defense articles or services proposed to be sold:

This information would be developed through an in-country site survey conducted by a USAF team.

K. An analysis of the extent to which comparable kinds and amounts of defense articles or services are available from other countries:

Comparable aircraft are manufactured in Western European nations and the Soviet Union.

L. An analysis of the impact of the proposed sale on United States relations with the countries in the region to which the defese articles or services which are the subject of such sale would be delivered:

Although Israel's Arab neighbors object to the sale of these advanced fighters to Israel, they recognize the special responsibilities the US has with regard to Israel. US relations with the neighboring Arab states are therefore unlikely to be significantly affected.

M. A detailed description of any agreement proposed to be entered into by the United States for the purchase or acquisition by the United States of defense articles, services, or equipment, or other articles, services or equipment of the foreign country or international organization in connection with, or as consideration for, such letter of offer, including an analysis of the impact of such proposed agreement upon United States business concerns which might otherwise have provided such articles, services, or equipment to the United States, an estimate of the costs to be incurred by the United States in connection with such agreement compared with costs which would otherwise have been incurred, an estimate of the economic impact and unemployment which would result from entering into such proposed agreement, and an analysis of whether such costs and such domestic economic impact justify entering into such proposed agreement.

Not applicable.

DEFENSE SECURITY
ASSISTANCE AGENCY,
Washington, D.C., April 28, 1978.

In reply refer to: 1–1049/78ct.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78–35, concerning the United States Government's proposed Letter of Offer to Saudi Arabia for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $1,700 million and support costs of $800 million for a total estimated cost of $2,500 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
Acting Director,
Defense Security Assistance Agency.

[Transmittal No. 78–35]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Saudi Arabia

(ii) Total Estimated Value:

[In millions]

Major defense equipment*	$1,700
Other	800
Total	2,500

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Sixty (60) F–15 aircraft (45 F–15s and 15 TF–15s) with spares, support equipment, two flight simulators, basic munitions, including AIM–9J and AIM–7F air-to-air missiles, technical data, U.S. technical and pilot training and aircraft delivery. Concurrent with in-country delivery of the aircraft, contract maintenance.**

(iv) Military Department: Air Force.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: April 28, 1978.

**On-the-job maintenance training, and supply support.

POLICY JUSTIFICATION

SAUDI ARABIA—60 F–15 AIRCRAFT

Saudi Arabia is of critical importance as a moderate, constructive influence in the Middle East, particularly in the quest for peace. It has a major role in world affairs as the leading exporter of petroleum and as a key factor in international finance. With extensive territory, vast wealth, a small population and a small defense force, Saudi Arabia has a legitimate need to acquire a modern air defense system to help protect its natural resources and to insure its natural security. In turn, the United States has a basic national interest in strengthening Saudi Arabia's security through the provision of equipment appropriate to legitimate Saudi defense needs. In manifesting our concern for Saudi security we help insure a continued responsible Saudi role and cooperation across a wide spectrum of very important issues.

Saudi political and financial support for the moderate Arab nations is a critical component of our effort to achieve a Middle East peace. Saudi Arabia has also resisted expansion of Soviet influence and radical movements in the Arabian Peninsula, Persian Gulf, and elsewhere in the Middle East and Africa.

Saudi Arabia, as the primary supplier of US crude oil imports, provides 23% of our current imports and 8% of our total consumption. Continued access to this oil is essential to sustain our domestic growth rate, to provide a cushion as we seek greater energy self-sufficiency, and to meet the energy requirements of our allies in Western Europe and Japan. Saudi Arabia's determination to act responsibly to restrain oil prices was demonstrated at the Doha (1976) and Caracas (1977) OPEC Conference. Of potentially greater importance, however, is Saudi Arabia's long term willingness to provide the quantities of oil we and other Western nations will require.

Since Saudi Arabia was subjected to air attack by Egypt in 1963, its leaders have been particularly sensitive to the need to modernize the country's very limited air defenses. Saudi planners take into consideration a long history of ideological and political differences with Iraq and the fact that, since 1969 South Yemen has employed its forces against Saudi Arabia on three occasions.

Largely on the basis of recommendations in surveys conducted by the US Department of Defense, the Saudi Government has defined its broad air defense system requirement to include a mix of aircraft, surface-to-air missiles and appropriate radar and command/control systems. Pivotal to this requirement is a long-range, all weather interceptor with a capability to locate and destroy invading aircraft. The Saudi Government has selected the F–15 as answering these needs.

The Administration has concluded that the sixty F–15s requested by the Saudi Government would be an appropriate counter to external threats and would make a major contribution to Saudi leaders' confidence in their air defense.

The F–15 is a highly reliable and easily maintainable modern air superiority fighter. It combines advance radar, fire control and electronic countermeasure equipment with a mix of air-to-air missiles (4 SPARROWs and 4 SIDEWINDERS) and a 20mm cannon for use in air-to-air engagements. The mission for which it was designed is air superiority. The F–15 has a limited capability to perform in the ground attack role. Its twin engines are an important reliability and safety factor for the Saudis in flight operations over desolate terrain largely lacking in emergency landing facilities.

The cost of the sixty aircraft, spare parts, ground support equipment, munition, contractor maintenance and supply support is estimated at approximately $2.5 billion. The first of these aircraft would tentatively come off the production line in 1981, and would be used for preliminary training in the US. Deliveries would be made to Saudi Arabia following the preliminary training in the United States.

The F–15 will fill the gap left by the grounding in the early 1980s of British origin Lightning interceptors in the Saudi inventory which are approaching the end of their structural life and are increasingly unsafe to fly. They will augment Saudi Arabia's limited number of I–HAWK surface-to-air missiles and F–5E fighters. The latter have limited range, and are intended for use by the Saudis primarily in an air-to-ground role; they do not possess an all weather capability. The F–15s long-range radar with its look-down-shoot-down capability will bridge the gaps that exist in both low and high altitude radar coverage of the kingdom.

Even with the F–15, Saudi Arabia will continue to have one of the smallest inventories of advanced aircraft in the Middle East. Iraq, Israel, Iran and Syria are all equipped with modern advanced fighter aircraft as well as air forces that are significantly larger than Saudi Arabia's. We have concluded that this sale will not alter the basic military balance in the region.

Using trained personnel already available as a result of the phasedown of the Lightning program augmented by graduates of training programs in the US and output from the kingdom's Technical Studies Institute, the Saudi Air Force should be able to meet the manning requirements for both F–5 and

F–15 technicians by the time that the F–15 is introduced into Saudi Arabia. This will have a positive impact on the number of contractor and USAF personnel required for the initial introduction of the F–15 system. It is estimated that between 500–600 contactor personnel will be required at peak contractor manning, about two years after the first F–15 is delivered. In this case, we expect even faster progression toward self-sufficiency in the maintenace and supply areas than was experienced in the F–5 program. The number of USAF personnel assigned to the in-country F–15 program should be about forty.

Upon that government's signing the required letter of offer related to this proposed sale, the value of this transaction will count toward the Administration's worldwide arms transfer ceiling in the year in which the LOA is accepted.

A. A detailed description of the defense articles or services to be offered, including a brief description of the capabilities of any defense article to be offered.

Sixty (60) F–15 aircraft (45 F–15Cs and 15 F–15Ds) with spares, support equipment, two flight simulators, basic munitions including AIM–9J and AIM–7F air-to-air missiles, technical data, training of pilots and technicians in the U.S. and aircraft delivery will be offered for cash purchase by the Saudi Arabian Government (SAG). Concurrent with in-country delivery of the aircraft, contract maintenance; on-the-job maintenance training; and supply support will be provided.

The F–15C is a single crew, high-performance, supersonic, all-weather air superiority fighter. Its primary mission is aerial combat, but it also has a limited capability for air-to-surface missions. Radar and heat-seeking air-to-air missiles and a 20mm gun are the primary armament. The aircraft is powered by two turbofan engines. A two-seat version (F–15D) intended to facilitate training has an identical front cockpit, the same internal fuel capacity and essentially the same combat capability as the single-seat F–15.

B. An estimate of the number of officers and employees of the United States Government and of United States civilian contract personnel expected to be needed in such country to carry out the proposed sale:

The number of USAF personnel expected to be assigned to the in-country F–15 program should be approximately 40.

The number of contractor personnel estimated for initial introduction of the F–15 should be 500–600 personnel at peak employment two years after the SAG receives the first aircraft.

C. The name of each contractor expected to provide the defense article or defense service proposed to be sold (if known on the date of transmittal of such report).

Aircraft: McDonnell Douglas Corporation.

F–100 Engine: Pratt and Whitney.

D. An analysis of the arms control impact pertinent to such offer to sell, prepared, in consultation with the Secretary of Defense:

From the arms control perspective, a sale of 60 F–15 fighter aircraft to Saudi Arabia would cause some concern. The introduction of such an advanced air capability could intensify the action-reaction cycle among Middle Eastern States, could lead to further demands by other Middle Eastern states for similar advanced aircraft, and could complicate efforts to obtain the cooperation of other suppliers in limiting transfers of advanced weapon systems to the Third World. Concerns about the consequences of the sale for regional stability are mitigated somewhat as the air-to-surface weapons delivery capability of the F–15s sold to Saudi Arabia will not exceed that of current operational USAF F–15s.

Some 600 U.S. contractor personnel will be required for an extended period to enable the Saudis to absorb the F–15. These will replace the British technicians currently associated with the Lightning programs. This number represents a slight increase over the 30,000 Americans already in Saudi Arabia, of whom 4,450 are defense contractor and DOD personnel.

On the other hand, there are compelling political and arms control reasons that favor the sale. Saudi Arabia plays an important role in efforts to bring about a Middle East peace settlement—a principal U.S. objective in the area. Such a settlement, of course, would further U.S. arms control objectives. Saudi transfer of the F–15 to other Arab countries appears improbable; other countries would lack the extensive capabilities and highly trained personnel required to operate and maintain this aircraft. On balance, these and other factors that favor the sale would seem to outweigh the arms control concerns mentioned previously.

E. The reasons why the foreign country or international organization to write the sale is proposed to be made needs the defense articles or services which are the subject of such sale and a description of how such country or organization intends to use such defense articles or services:

Saudi Arabia needs the F–15 fighter aircraft to improve its air defense against the current and potential threat represented by much larger, modern armed forces of neighboring states. The current Saudi air defense system is inadequate to meet the threat. F–15s will enhance the Saudi deterrent and defensive capabilities by providing the maximum air defense capability possible within Saudi Arabia's severe manpower constraints. Saudi Arabia plans to use the F–15s in a defensive air-superiority role, as its front line of air defense against any attacks from the modern fighter bombers of neighboring states. The first two squadrons formed will be stationed at Dhahran near the Persian Gulf, and at Taif, in the west central portion of the Kingdom. The third squadron will likely be stationed at Khamis Mushayt to the southwest. The Saudi government has indicated to us it does not intend to station F–15s at Tabuk in the Northwest.

F. An analysis by the President of the impact of the proposed sale on the military stocks and the military preparedness of the United States.

None. The aircraft would be provided from production on a non-interference basis.

G. The reasons why the proposed sale is in the national interest of the United States:

Saudi Arabia is of immense importance in promoting a course of moderation in the Middle East—with respect to peace making and other regional initiatives—and more broadly in world affairs, as in petroleum and financial policy. Since the administration of Franklin D. Roosevelt, every U.S. President has recognized the importance of Saudi Arabia to our own national security interests and has reaffirmed the importance we attach to the security and territorial integrity of Saudi Arabia.

The longstanding U.S. role as principal supplier of equipment and training for the modernization of Saudi defense forces has underscored to the Saudi Government the determination of the United States to help preserve the independence of the moderate States in the Middle East.

Saudi confidence in its relationship with the United States has encouraged Saudi Arabia over the years to take positions which have on occasion not been popular in Arab or OPEC circles but which have served the broad security interests of the non-communist world. Saudi Arabia's confidence in the constancy of the U.S. commitment to help it meet its defense requirements has been a key element in strengthening a broad bilateral relationship which has been beneficial to major U.S. national objectives, including the quest for peace in the Middle East and the welfare of the international economy.

For a number of years both the U.S. and Saudi Governments have recognized a legitimate need to modernize Saudi Arabia's very limited air defense capability. The sale of 60 F–15s is an appropriate response to this need. It is a manifestation on the sort of concern for Saudi security which has encouraged Saudi Arabia to cooperate with the U.S. in areas critical to our own national interests.

H. An analysis by the President of the impact of the proposed sale on the military capabilities of the foreign country or international organization to which such sale would be made:

The sale of 60 F–15s to Saudi Arabia will be an appropriate counter to external threats without altering the basic military balance in the region. Saudi Arabia has a legitimate requirement to improve its air defenses. Pivotal to this requirement is a long-range, all weather interceptor with a capability to locate and destroy aircraft that could constitute the air threat in the 1980's and beyond. The F–15 is appropriate to meeting these needs.

I. An analysis by the President of how the proposed sale would affect the relative military strengths of countries in the region to which the defense articles or services which are the subject of such sale would be delivered and whether other countries in the region have comparable kinds and amounts of defense articles or services:

The Saudi purchase of 60 F–15s will not alter the basic regional military balance. Saudi Arabia now has, and will continue to have, the smallest inventory of combat aircraft of any major state in the region.

Iraq, Iran, Israel, Egypt, and Syria each has an air force several times larger than Saudi Arabia's. The sale introduces no new capability into the region as comparable aircraft are already present.

J. An estimate of the levels of trained personnel and maintenance facilities of the foreign country or international organization to which the sale would be made which are needed and available to utilize effectively the defense or services proposed to be sold:

It is estimated that maintenance of the SAG F–15s will require approximately 900 trained technicians. The total fighter technician requirement (F–5s and F–15s) for 1981 is 2,550. The total number available in 1981 is programmed to be 2,885. Thus, there wi'l be sufficient Saudi maintenance personnel available to support the F–15 program requirements. A total of 75 pilots will be required for the SAG's F–15s. These will be available from Lightning aircraft phase-out and pilot training programs. Certain maintenance facilities for the existing F–5 and Lightning aircraft will form the basis for the facilities to be developed for the F–15.

K. An analysis of the extent to which comparable kinds and amounts of defense articles or services are available from other countries:

Comparable aircraft are available from Western European sources.

L. An analysis of the impact of the proposed sale on United States relations with the countries in the region to which the defense articles or services which are the subject of such sale would be delivered:

Throughout the Middle East and neighboring Africa, this sale will be regarded as a significant manifestation of the importance which the US attaches to a strong relationship with Saudi Arabia.

Key Arab states such as Egypt, Jordan, and Syria will regard the sale as underscoring the closeness of the US-Saudi relationship as well as the US national security interest in the Middle East. For this reason the sale is conducive to obtaining the cooperation of these states in our efforts to work toward a peace settlement in the region.

The sale will be less popular with the Arab "rejectionist" states, particularly Saudi Arabia's Soviet-armed neighbors Iraq and the People's Democratic Republic of Yemen.

Israel has expressed its opposition to the sale. We hope, however, that Israel will take into account the importance of our assisting Saudi Arabia to fulfill its legitimate defense needs, recognizing that it is in Israel's interest that the US rather than another supplier provide the equipment required for Saudi air defense.

Iran, the smaller Arab states of the Persian Gulf, and the Yemen Arab Republic, will welcome the sale as evidence of US concern for the region's security and determination to encourage Saudi Arabia to continue to play a responsible, moderating role in both regional and broader international affairs.

M. A detailed description of any agreement proposed to be entered into by the United States for the purchase or acquisition by the United States of defense articles, services, or equipment, or other articles, services, or equipment of the foreign country or international organization in connection with, or as consideration for, such letter of offer, including an analysis of the impact of such proposed agreement upon United States business concerns which might otherwise have provided such articles, services, or equipment to the United States, an estimate of the costs to be incurred by the United States in connection with such agreement compared with costs which would otherwise have been incurred, an estimate of the economic impact and unemployment which would result from entering into such proposed agreement, and an analysis of whether such costs and such domestic economic impact justify entering into such proposed agreement.●

CRITICAL CHOICES FOR THE BONN ECONOMIC SUMMIT

● Mr. JAVITS. Mr. President, the Economic Summit scheduled for July in Bonn may be the last chance for leaders of the industrialized countries to get together to map out an internationalist solution to the structural problems facing the world economy. If the present leadership fails to act in a timely manner, the consequences may mean a recession and even a depression in the next few years.

In its April 29, 1978 edition, the London Economist contains an excellent analysis of the challenges facing the world's leaders as they prepare for the Bonn Summit. The editors of the Economist focus on the problems facing the developing countries and urge that—

If the summiteers wanted to be really imaginative, they would mount a contemporary version of Marshall aid to channel the money the West Germans and Japanese cannot spend to the ldcs that could.

Mr. President, as my colleagues are aware, I have called on numerous occasions for the development of a capital pool that will channel funds that cannot be used in the OPEC or in the industrialized countries into productive investments in the developing countries. On April 26, I introduced, together with seven of my colleagues, a resolution calling on the President to begin discussions with the surplus OPEC countries for the development of such a capital pool. This pool is important specifically for the reasons cited in the Economist, that is, for the stimulation of noninflationary growth and expansion of the broader markets for goods and services, which the international economy requires to deal with its structural problems.

It is critical that the President, together with his counterparts in the other capitals, insure the success of the Economic Summit. It is important that we avoid the "more likely" outcome predicted by the Economist, "further ritual noises, but no real rise in poor countries' demand."

Mr. President, I call the article to the attention of my colleagues and request that it be printed in the RECORD.

The article follows:

[From the London Economist, Apr. 29, 1978]
1978]

MOVING THE WORLD UPHILL

It was the unhappy fate of Sisyphus, the erring Titan, to spend eternity pushing a boulder up a hill without ever quite reaching the top. The leaders of the capitalist world must know the feeling. Rambouillet 1975, Puerto Rico 1976, London 1977—at each of the post-Opec summit meetings, the communiques have rung with confidence that the world economy was on the way up: each time, exasperatingly, it has slipped back. The heads of government of the United States, Canada, Japan, West Germany, France, Britain and Italy, along with their finance ministers and Mr. Roy Jenkins of the EEC, will be in Bonn in July to have their resolution tested again; but the preliminary muscle-flexing has already begun. Too many of the muscle-flexers seem to want to push at the symptoms of present troubles (including fluctuating exchange rates) instead of the cause (which is the basic imbalance in world payments).

In the year between London and Bonn the foreign exchange markets have discomfited all the seven summiteers (with the improbable exception of Italy). But the currency gyrations, like the dismally slow growth and the threatened slide to protectionism, are all responses to the very uneven distribution of the world's trade surpluses and deficits. This year, 1978, will be the fifth successive year in which a handful of countries has run a sackful of surpluses, which the rest of the world then has to finance by getting into debt. Some can do that more successfully than others, but none of them likes it. And the ways they show their dislike—deflation, protecting domestic industry, even attempts at competitive devaluation—have written the agenda for the Bonn summit.

Fortunately, membership of the surplus and deficit clubs has not, so far, been immutable. Last year seven countries (Saudi Arabia, Kuwait, Qatar, the United Arab Emirates, Japan, Switzerland and West Germany) ran a combined current-account surplus of about $45 billion. In 1974, the seven largest surpluses totalled $55 billion and included Venezuela and Iran instead of Japan and Switzerland. America has swung enormously, transforming an $11.6 billion surplus in 1975 into 1977's $20 billion deficit. Britain and Italy had the largest (more than $8 billion) deficits in 1974; with the aid of IMF medicine, they have now worked their way painfully back to surplus.

The danger now is that the structure of payments will ossify. All the Opec countries with large import appetites are already in deficit, and the other oil producers probably will not go into one. West Germany, Japan and Switzerland seem happy with their surpluses. The financing burden is no longer being juggled around as much as it was. But when the credit crunch comes for a deficit country, it sees no alternative but to try to get back as quickly as possible to a payments surplus, leaving behind its share of the world's deficits for others to add to their own. IMF edict or no, more and more countries are having to tread this retrenchment path—Canada, Portugal, Turkey, Spain, Norway—while fewer are consciously heading the other way into larger and counterbalancing deficits. The more the world chases the mirage of surpluses for all, the longer the recession will last. Even the United States has found that the main reward for its good neighbourliness in running a large deficit has been a loud raspberry from the foreign exchange markets.

REVALUE AND REFLATE

The adjustment of currencies is part of the process of adjusting current accounts, and the dollar's decline has done its bit. But exchange-rate changes are not enough on their own. There is little hope of squeezing strong-currency countries' exporting firms out of overseas markets unless they have an expanding domestic market to turn to: they will continue exporting because they do not want to have to sack workers (so that the countries running trade deficits then have to deflate and sack their workers instead). That is not the most sensible way of managing the enormously productive resources of the West German and Japanese economies, but it is what their governments are doing.

Sooner or later, that will help them find common cause with the international case for reflation. If they protest too much that "structural" difficulties make it impossible to expand, President Carter can explain how Keynesian measures have meant there are now 9m more jobs in America than in 1975 (see page 96). But, however, the reflationary case is advocated, it will rightly be tempered by the memory of the 1973 commodity boom. Too much reflation in 1978 could be father to a 1980 price explosion and grandfather to a slump of 1981.

This is not an argument for doing nothing at Bonn: for some commodities, higher prices are both inevitable and desirable. On the face of it, commodity prices may already seem high—despite prolonged recession, they are 24% up on four years ago. (They fell 32% in the two years after the Korean war boom.) Even in real terms (*The Economist* dollar index deflated by manufactured export prices) they have fallen only 12% since 1974. But this is largely because food prices have gone up; metal prices have slumped, with the real price of copper only one third of what it was at the 1974 peak. This is the main reason why Zambia and Zaire are in the hands of the IMF; it also explains the dearth of investment in new copper mines. The spectre of exploding boomtime commodity prices, caused by shortages, is more likely to materialise the longer that their slumptime prices are kept below their marginal cost of production.

Raising some of them a little now would give a helping hand to many less developed countries. Since 1974 the non-oil ldcs have chalked up a cumulative trade deficit of about $120 billion. They will not be represented at Bonn, but the seven summiteers should not need reminding how crucial that $120 billion of international-deficit-financed spending has been to underpinning world demand. Nor how much of the $120 billion

is owed to the banks and governments of the rich world. At every summit, ritual noises have been made about north-south issues, but there is very little of substance to show for four years' animated discussion: only agreement in principle to write off the official debts of the poorest nations (about $500m—total ldc indebtedness is an estimated $300 billion), some shifting of the log-jam on a common commodity fund, and the tenuous prospect of more liberal trading arrangements emerging from the Tokyo round. That is a thin diet, especially if the unspoken result of this summer's summitry will be that the ldcs are going to carry on shouldering the lion's share of other countries' surpluses. If the summiteers wanted to be really imaginative, they would mount a contemporary version of Marshall aid to channel the money the West Germans and Japanese cannot spend to the ldcs that could. More likely, they will agree on further ritual noises, but no real rise in poor countries' demand.

TOGETHERNESS

It has seldom been more important to gear national policies to fit international goals, rather than the other way round. That is not the view of Professor Milton Friedman. He told a Scottish audience last week that countries should not try to expand their economies together, but should pursue what each deemed to be their own best interests. In an ideal world—no Opec cartel, smoothly adjusting exchange rates, the benefits of free trade universally accepted—that kind of international invisible hand would work. Today it would allow the stone of Sisyphus to slip back. To judge by what the governments of the world are saying, their narrow national interest is for everyone to run a current-account surplus. Individually they will try to do so; collectively they cannot succeed. That may not be the stuff of summit rhetoric, but it is reality.●

SCHOOL LUNCH PROGRAM TRANSFER OPPOSED

● Mr. TALMADGE. Mr. President, on April 18, the Committee on Agriculture, Nutrition, and Forestry sent a letter to the Senator from Connecticut, Mr. RIBICOFF, chairman of the Committee on Governmental Affairs, expressing our vigorous opposition to the proposal to transfer the school lunch and other child nutrition programs from the Department of Agriculture to the proposed new Department of Education.

The depth of the committee's feeling on this crucial issue is demonstrated by the fact that the letter was signed by all 18 members—both Democrats and Republicans.

The action of our committee is not to be construed as opposition to the creation of the Department of Education itself. Indeed, I support such a Department. I know that some other members of the committee do likewise.

But we are unanimous and emphatic in our opposition to the transfer of the school lunch program from the Department where it has been administered effectively from the inception to a new and untested agency. I can think of no activity of the Federal Government that has made a greater contribution over the years to the health and welfare of this country than the school lunch program.

As our letter states, the proposal to strip the child nutrition programs from USDA would be bad for the programs, bad for agriculture, and bad for the children of America.

Our committee also views this proposal as only the first step in a long-developing campaign to emasculate and dismember the Department of Agriculture. If this first move succeeds, efforts to strip away other functions will surely follow until the Department is reduced to sub-Cabinet status.

I and the members of the Committee on Agriculture, Nutrition, and Forestry do not intend to sit idly by and let this happen.

Mr. President, I submit for the RECORD the text of our letter.

The letter follows:

COMMITTEE ON AGRICULTURE,
NUTRITION, AND FORESTRY,
Washington, D.C. April 18, 1978.

Hon. ABRAHAM RIBICOFF,
Chairman, Governmental Affairs Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: We are writing with regard to the provision in S. 991 which would transfer the child nutrition programs, including the school lunch porgram, from the Department of Agriculture to a new Department of Education.

While many of us support the concept of a Department of Education, all of us believe that transferring the child nutrition programs to the Department of Education would be detrimental to the programs, to the children of the Nation and to American agriculture. It might well jeopardize the creation of the Department.

The school lunch program has grown and developed within the Department of Agriculture. It makes no sense at all to transfer the child nutrition programs out of the Department of Agriculture at the very time it is becoming increasingly clear that food, agriculture, and nutrition are interrelated.

Transferring the child nutrition programs would, in our opinion, lead to elimination of commodity support for the program, undercut the nutritional aspects of the program, and remove the school lunch program as a mechanism for the disposal of surplus commodities. In addition, it would greatly undercut the effectiveness of the Department of Agriculture.

The school lunch program today constitutes the only effective means through which the Secretary of Agriculture can provide price and market stability to those farm commodities that do not enjoy the protection of government price support programs. This is accomplished through direct USDA purchases of those commodities when in surplus supply—such as beef, pork, poultry, eggs, fruits, potatoes and other vegetables—for distribution through the school lunch program.

If this program is stripped from the Department of Agriculture and placed in the new and untested hands of a Department of Education, this closely related and mutually beneficial agriculture and nutrition function will be greatly weakened, if not destroyed, and the children would suffer. The function should remain in a single Department that will have concern and jurisdiction for both. To divide the function would probably mean over a period of time that distribution of surplus commodities through the school lunch program would be replaced by a straight cash subsidy program. That would be highly detrimental to both the recipients and producers of farm commodities in temporary surplus.

The proposal to shift the child nutritional programs to a new Department of Education will, if successful, encourage further predatory raids on functions and activities of the Department of Agriculture. Indeed, such raids already are being organized. If the dismemberment of USDA is allowed to succeed, this century-old Department will become little more than an empty shell, incapable of serving either farmers or consumers.

The role of "food and nutrition" in our agriculture policy has increased dramatically in recent years. This interdependence will grow in future years. It must not be divided at this critical juncture.

The bounties of our land must be divided between the competing demands of foreign sale, foreign humanitarian donation, domestic sale, and our domestic food programs.

Nutrition is no longer viewed as a "fad" but as an important policy issue with major consequences for American agriculture as well as our Nation's health.

In short, it is of paramount importance that the United States have a coordinated food and agriculture policy—and to accomplish that goal these two areas must be united in the Department of Agriculture.

We believe this has always been the historic role of the Department of Agriculture.

The original mandate creating the Department in 1862 required it "to acquire and to diffuse among the people of the United States useful information on subjects connected with agriculture in the most general and comprehensive sense of the terms . . ."

The first appropriation by the Congress to a federal agency specifically for studies in human nutrition was made to the Department of Agriculture in 1893.

Later when the National School Lunch Act was passed in 1946 "to safeguard the health and well-being of the Nation's children and to encourage the domestic consumption of nutritious agricultural commodities", the Secretary of Agriculture was chosen to administer the program.

The Food and Agriculture Act of 1977 noted: "nutrition and health considerations are important to United States agriculture policy."

Most recently, the Secretary of Agriculture, Bob Bergland, told the Congress:

"We think this country must develop a policy around human nutrition, around which we build a food policy for this country and as much of this world as is interested. And in that framework we have to fashion a more rational farm policy. We've been going at it from the wrong end in the past."

Central to the development of a nutrition policy is the Nation's food programs: Food stamps, school lunch, school breakfast, and WIC. These programs, which represent the Nation's backbone in the fight against hunger, must not be taken from the Department of Agriculture just as we broaden our investigations in the area of nutrition and being to address other emerging nutritional issues, including obesity, the relationship between diet and disease, nutrition research, food labelling, and nutrition education. Indeed, as we progress into these other issues the food programs may provide a valuable source of information for consumption data, a forum for nutrition education, and perhaps other research information.

GAO, in a recent report on nutrition research, found a "lack of central focus and coordination" to be the number one barrier to progress in the area.

We feel certain that progress in evolving a food and agricultural policy is equally dependent on having a central focus. If the development of a national energy policy demanded a new Department of Energy to coordinate and pull together all aspects of the problem, then we insist that the same

principle applies to the development of a national food, nutrition, and agriculture policy. The nutrition programs should not be sent to other agencies or department; indeed the food-related functions of other departments should be consolidated within the Department of Agriculture.

We, therefore, strongly urge you, Mr. Chairman, to reconsider that provision of S. 991 and of the President's proposal which would transfer the child nutrition programs to a new Department of Education.●

HOLOCAUST IN CAMBODIA

● Mr. HATCH. Mr. President, recently the NBC television network broadcast a mini-series treating the mass genocide that the Nazis conducted against the Jewish population in Europe. That period of history has become known as the Holocaust and the program was so titled.

Mr. President, the program brought the horrors of mass murder into the living rooms of the American public and we were shocked to learn that such atrocities had been permitted to take place. A common question became, "How could a civilized people do this?" The answers were varied, and many who were alive at that time professed ignorance of the actions being taken against the Jews by the Nazis. I cannot offer any judgment of the people that stood by at that time and permitted such shocking actions to take place, but I can express my outrage that we would permit such an event to take place again.

I have one simple question to ask the people who were so shocked at what the Nazis did to the Jews of Europe—Have you looked at what has happened in Cambodia? What should the United States do about that? Information has filtered back to this country that as many as 2 million people have been murdered in Cambodia as a reprisal by the Communists for their failure to support the Communists earlier. I cannot stand by and allow this to happen without trying to do something to prevent it from continuing. Unfortunately, I do not have the power to command it to cease. What I can do is raise a hue and cry throughout this nation that will hopefully force the administration to some sort of action to halt this mass genocide.

Today's Washington Post carries an item in Jack Anderson's column that I feel should be brought to the attention of my colleagues in the Senate. The column details some of the atrocities that are being commited in Cambodia. I ask that this article be printed in the RECORD.

The article follows:

[From the Washington Post, May 2, 1978]

IN CAMBODIA, OBLITERATING A CULTURE

(By Jack Anderson)

There is another Holocaust story, every bit as stark as the recent TV saga, which should be rubbed into the world conscience.

Holocaust dramatized the ordeal of the Jews who were brutalized and massacred by the Nazis 40 years ago. We have compiled an equally staggering story of the horrors that are going on inside Cambodia today.

The Nazis began the systematic slaughter of all Jews under their control. The Cambodian Communists are trying to eradicate not a race but a culture. They are engaged in a deliberate, disciplined campaign to remake the society from the ground up. Intelligence reports tell of "completing the execution of all people who are not from the poor farmer-working class."

Six million Jews perished under the Nazi heel; this was more than six percent of occupied Europe. There has been no body count of how many Cambodians have died from mistreatment and execution. Competent sources have offered estimates ranging from 1.8 million to 2.5 million, about one-third of the seven million people who inhabited Cambodia.

The Nazis tried to conceal their monstrous crime from the world. They used such euphemisms as "resettlement," "removal," and "special action" to describe the mass executions. The Cambodian comrades also have their special vocabularly. A former communist official, who has participated in the killings, told U.S. intelligence sources:

"The Khmer word for 'kill, assassinate, execute' was never spoken when the annihilation policy was discussed. The Khmer term used was 'baoh caol,' literally 'sweep, throw out' or 'sweep, discard'; or 'baoh s'aad,' literally 'sweep clean.' "

The Nazis used firing squads and gas chambers to exterminate the Jews. In Cambodia, the communists began with firing squads. But they decided that bullets were too precious to waste on their victims. So hundreds of thousands were simply bludgeoned to death and buried in mass graves.

The favorite weapons of extermination in Cambodia has become the garden hoe. The same grisly report keeps recurring in intelligence dispatches: "Each man was blindfolded, led to the edge of a ditch and beaten to death with a hoe."

The brutality began even before the communists swept to victory in Cambodia. Some of the last classified cables from the U.S. embassy reported that communist guerrillas had turned upon the civilian population with a sudden savagery. "The attacks are seen by the refugees as enemy punishment inflicted upon them for rejecting KCP [Khmer Communist Party] offers to come over to the KCP side," alleged one of the final cables.

The communists swarmed over the capital city of Phnom Penh on April 17, 1975. The wholesale slaughter began on the same day. It was not the ravages of undisciplined troops gone wild. Rather, it was the calculated, cold-blooded policy of the communist conquerors to eradicate all vestiges of the existing social order. "The KCP rationale is to completely rid the society of all elements which are not of the lower social class," according to a former Communist official.

Officers of the former army were the first to die. "The KCP simultaneously began executing all wealthy farmers, prostitutes, high level monks, teachers, fortune tellers, former enlisted men and civil servants."

Nor were their families spared.

The crude bludgeonings continued for more than a year. "Toward the latter part of 1976," the intelligence reports claim, "the search for and execution of old society people slackened off. In April 1977, however . . . it once again became a primary party activity to search out and eliminate the last vestiges of the old society."

The most recent cable we have seen on this subject was dated Feb. 13, 1978. It declares tersely: "A renewed emphasis was placed on completely eliminating all vestiges of the former government and completing the executions of all people who were not from the poor farmer-working class."

This maniacal attempt to establish a new order by mass murder was supposed to be kept secret. The communists sealed off their country tightly. The borders are mined and patrolled.

Yet a few refugees managed to escape, some after harrowing experiences. Less than two months after the communist takeover, we were able to get enough eyewitness accounts to report on June 4, 1975: "It appears the Khmer Rouge, as the Cambodian communists call themselves, may be guilty of genocide against their own people." Now we have compiled intelligence reports and eyewitness accounts two inches thick. The evidence is overwhelming.●

ED GAFFNEY—NATIONAL SMALL BUSINESS PERSON OF THE YEAR—HONORED DURING SMALL BUSINESS WEEK

● Mr. NELSON. Mr. President, Congress and the President have designated this week as National Small Business Week—a tribute to the dedicated men and women who are associated with America's 13 million small businesses.

As chairman of the Senate Small Business Committee, I am pleased to report that small business has scored some impressive gains over the past year. Just last month, President Carter responded to a Senate-passed resolution by calling for a White House Conference on Small Business. Such a conference, which has never been held before, can contribute more than any other single factor to identifying and analyzing the needs of America's independent entrepreneurs.

It will be a national forum of high visibility—an event that will raise the whole level of public awareness about small business.

Yet, small business still has a multitude of problems. Although, this week we can take pride in some recent legislative accomplishments, there is still much to be done. We need to help small businesses raise the capital they need to grow and expand and to improve the regulatory climate for small businesses, for example.

In a way, the remarkable thing is that in spite of all the hassles involved in getting into a small business, our entrepreneurial spirit still flourishes: there were half a million start-ups last year. A lot of these—too many—will fail; we still have to help entrepreneurs gain the management skills necessary to survive and we have to improve their climate of taxation, investment, and regulation. But Americans are saying loudly and clearly that they still want the right of entrepreneurship that only small business can offer.

This is also a week in which my colleagues in the Senate can extend their congratulations to the small business person of the year from each State and the District of Columbia. Selected each year by the Small Business Administration, these are 51 of the Nation's outstanding achievers in small business.

This year, I am happy to be able to extend my congratulations not only to the Wisconsin Small Business Person of the year, but to the National Small

Business Person of the year as well, Edward Gaffney. Mr. Gaffney, president of Ortho-Kinetics of Waukesha, Wis., founded Ortho-Kinetics, which manufactures appliances for the handicapped and arthritic, in 1962. Since then, it has grown from a one-man operation to a leader in its field, employing more than 50 people in Waukesha and sixty sales representatives nationwide.

In recent years, Ortho-Kinetics has begun ot export almost 20 percent of its production to Britain and France, and it will soon be entering the Japanese market. Last year the firm's sales totalled almost $3 million. Many handicapped and arthritic people are now able to lead fuller lives thanks to the Ortho-Kinetic inventions—such as a wheelchair for crippled children which automatically folds on to automobile seats.

In spite of all the demands of such a growing company, Mr. Gaffney has still found time to be active in community and civic affairs. He was one of the organizers of the Independent Business Association of Wisconsin, and helped that group in turn, become one of the founders of the Council of Small and Independent Business Associations (COSIBA).

So National Small Business Week allows us to salute individuals like Ed Gaffney, who exemplify the American entrepreneurial spirit today, as well as to reflect on what we must do to strengthen the important role they play in our overall economic well-being.●

VIETNAM FOOD SITUATION

● Mr. McGOVERN. Mr. President, 3 full years have now elapsed since the end of the war in Vietnam. According to the recently released report of a UN mission which visited Vietnam between November 21 and December 6, reconstruction is progressing at a rapid pace—

despite such very adverse circumstances as lack of appropriate machinery and equipment, bad weather, floods, drought, and typhoons.

As the report notes, however—

the extremely wide range of damage and the quasi-total absence of modern equipment are placing an enormous burden on the Vietnamese....

A New York Times/CBS public opinion poll taken last July showed fully 66 percent of Americans support sending U.S. food and medical assistance to Vietnam. It is my hope that the administration and the Congress will respond to this public consensus by providing badly needed humanitarian reconstruction assistance to Vietnam.

I ask that an excerpt from the report of the UN Special Mission on International Assistance for the Reconstruction of Vietnam be printed in the RECORD.

Chapter II—War Losses and Reconstruction

As indicated in previous reports by several missions of the United Nations system (UNHCR, UNICEF, UNDP, IBRD, IMF, WHO, FAO, WFP and others), the damages and losses caused by the long, drawn-out war are immense and differ in character and magnitude as between the south and the north.

A. South

(i) Agriculture: very badly damaged.

(a) Nearly 10,000 hamlets damaged, many destroyed;

(b) Millions of hectares of riceland destroyed or damaged;

(c) Over 1.5 million oxen and buffaloes killed;

(d) Millions of hectares of forest damaged by bombs or chemical warfare;

(e) Land rendered useless by millions of craters;

(f) Tremendous numbers of land mines still buried in the fields;

(g) Industrial crops badly damaged (coffee, rubber, sugar cane, jute, tobacco, tea).

(ii) Involuntary movement of millions of people (farmers, refugees—over 10 million people displaced, according to Vietnamese sources).

(a) Great losses of crops by abandonment of land and thus by rapidly falling production;

(b) Cultivated land rapidly overgrown by tropical vegetation, the clearing of which will require years of effort.

(iii) Loss of human lives; great numbers of war-disabled.

(iv) Social dislocations:

(a) About 300,000-900,000 orphans;

(b) Hundreds of thousands of invalids;

(c) Millions of unemployed;

(d) Increase in illnesses (malaria, venereal disease and drug addiction);

(e) Disruption of the educational and public health systems.

By contrast with north Viet Nam physical destruction of housing, roads, railways, bridges, infrastructure and industry was relatively light in the former Republic of Viet-Nam, except in its northern provinces (just south of the 17th parallel).

B. North

The nature of damage in north Viet Nam results from the extensive physical destruction, complete or partial, of:

(a) Cities and villages;

(b) Roads, railways and water transport;

(c) Industries and construction yards;

(d) Power supply centres;

(e) Rolling stock (locomotives and railway cars);

(f) Trucks and ships (small and medium-sized);

(g) Ports;

(h) Fishery equipment;

(i) Hospitals and schools;

(j) Irrigation systems and dykes;

(k) Riceland (by craters);

(l) Houses;

(m) Machines, tractors and agricultural equipment;

(n) Natural resources.

Moreover, the loss of human life was substantial; there are also approximately 75,000 orphans left.●

LABOR LAW REFORM

● Mr. WILLIAMS. Mr. President, I have been deeply concerned that much of the recent debate and critism of S. 2467, the labor law reform bill, has been unrelated to the bill's actual provisions. Rather than a rational discussion of the merits of the bill, much of the debate has been quite emotional and misleading. The storm of rhetoric may have clouded the fact that the reforms that S. 2467 incorporate are not only vitally important to the continued, efficient functioning of the National Labor Relations Board, but ultimately, to the preservation of an ordered and balanced system of industrial democracy. My view in this regard was recently significantly reinforced by the statement of an ad hoc committee of over 200 members, "social scientists for labor law reform," on the merits of S. 2467. I am encouraged by the fact that these social scientists, who are partisans of neither organized labor or organized business, agree on the importance of the labor law reform legislation to the continuing stability of America's industrial relations system.

I ask that their statement on labor law reform, and a list of the social scientists who are members of that committee, be printed in the RECORD.

The material follows:

STATEMENT ON LABOR LAW REFORM

One of the enduring strengths of the American social system has been its ability to avoid the ordeal of protracted industrial strife. The adoption of the National Labor Relations Act in 1935 ended the brutal days of managerial intransigience and unrestrained labor unrest. Since then, American workers and employers have been able to resolve most of their conflicts within the context of rational and well-balanced system of industrial justice. Now, we fear, that system has been dangerously weakened by outmoded enforcement procedures and a staggering administrative backlog.

To insure fairness and continued stability of the nation's industrial relations system, we believe that the NLRA should be amended to better meet current needs. Labor law reform legislation now before the Senate will guarantee speedy representation elections, increase penalties for willful violations of the law, expand the National Labor Relations Board, and streamline NLRB procedures to help cope with the growing caseload.

We believe that these reforms, though modest in intent and design, are necessary to preserve a system which has served both workers and employers so well during the last four decades. We urge their adoption.

THE LAW OF THE SEA CONFERENCE AND ARMS CONTROL

● Mr. KENNEDY. Mr. President, a recent article, "The SALT Talks and the Salt Water Talks" by Dr. John J. Logue of Villanova University, emphasizes the need for imagination and progress in the ongoing U.N. Conference on the Law of the Sea. Dr. Logue is the director of Villanova's World Order Research Institute. He is a close student of the Law of the Sea Conference and has lectured on its work in 15 countries. His article appeared in the February 3, 1978, issue of Commonweal.

Dr. Logue calls for "linkage of an arms control strategy with an imaginative strategy for building world community." He believes that a bold and imaginative law of the sea treaty could play a major role in devising a community-building strategy, one that would link East and West, North and South. He adds that such a treaty would require a major

change in the direction of the Law of the Sea Conference. He feels that unless there is such a change, the conference "will end with no treaty or with a 'giveaway treaty' that awards most of the immense wealth of the oceans to a very few nations."

Dr. Logue urges Law of the Sea diplomats to stop asking "How much can we grab?" and start asking "How well can we build?" He is intrigued by the imaginative way in which statesmen like Jean Monnet and George Marshall went about reconciling two nations which had been bitter enemies: France and Germany. He applies the analogy to the Law of the Sea negotiations and comes up with the following conclusion:

A strong ocean authority with substantial funding could do for the world what the Coal and Steel Community and the Economic Community have done for Western Europe, i.e., build trust, community, prosperity, and most importantly, peace.

I request that the full text of Dr. Logue's article be printed in the RECORD.

The text follows:

THE SALT TALKS AND THE SALT WATER TALKS

(By John J. Logue)

LACK OF VISION HAS BEEN A MAJOR FAULT

The "salt water talks" which have been going on for the last four years could do far more to limit strategic arms than the much publicized SALT talks. Unfortunately, the "arms control potential" of the giant United Nations Conference on the Law of the Sea has not been on the minds of the several thousand delegates who have participated in the Conference's six working sessions, most recently in last year's May-July session in New York City.

Lack of vision has been a major fault of the Conference. It is a major reason for the pessimism which envelops it as it limps toward a seventh session to be held in Geneva from last March to early May. Meanwhile in Washington, Congress is giving very serious consideration to deep seabed mining legislation which would torpedo the Conference.

If they thought about that arms control potential, the law of the sea delegates would adopt a very different approach to their work. Instead of asking, "How much can we grab?" they would begin to ask, "How well can we build?" They would do their best to build strong ocean institutions and provide substantial funding for them, especially from the thirty trillion dollars worth of oil and gas to be found in the continental margins of the world. By substantial funding I mean at least five to ten billion dollars a year. That kind of money could do a great deal to assist Third World development, to fund the urgent fight against ocean pollution and to assist the work of the United Nations.

A strong ocean authority with substantial funding could do for the world what the Coal and Steel Community and the Economic Community have done for Western Europe, i.e., build trust, community, prosperity and, most importantly, peace. Unfortunately, the four-year-old Conference is moving in the opposite direction. The chances are that it will end with no treaty or with a "giveaway treaty" that awards most of the immense wealth of the oceans to a very few nations. The draft treaty now before the Conference, the Informal Composite Negotiating Text (ICNT), is just such a treaty. It makes a mockery of the concept which inspired the Conference, the concept of ocean resources as "the common heritage of mankind."

It is now ten years since the day, November 1, 1967, when Ambassador Arvid Pardo of Malta made his famous speech, a four-hour one, urging the UN General Assembly to embrace that concept. Recently *Professor* Pardo—he is now on the political science faculty at the University of Southern California—fired a broadside at the ICNT. Speaking at Villanova University at a special colloquium in his honor Pardo said that the resource zone in the treaty is "a monumental grab for riches, unprecedented in world history." The result of it will be, he said, "the rich get richer, the poor remain poor and the landlocked countries which, with few exceptions, are the poorest of the poor, become poorer." The riches in question were, under traditional international law, *res communis*, i.e., common property.

As law of the sea diplomats work to give away the common property of mankind, arms negotiators are having one more try at restraining the mad race for nuclear armaments, delivery systems, laser beams, neutron bombs and the like. While one wishes them well, one cannot be optimistic as to the long-term results of their negotiations. They too lack vision—and boldness.

Unfortunately, the U.S. and Soviet Union appear to believe that arms control is a technical problem, a problem for the experts. So did the disarmament negotiators of the 1920s and 1930s. But nothing could be farther from the truth. Arms control and disarmament are basically political problems—not technical problems. The moral is clear. If you want workable arms control and disarmament you must build community and the institutions of community.

The Europeans learned this lesson at great cost. It took the horrors of World War II to teach it to them. In the late forties and early fifties Spaak, Monnet, Schuman and dozens of others saw that the best way to build peace in Europe was to build Europe. They were brilliantly successful in doing so. What they built was far from perfect. But it had a profound—and profoundly constructive—effect on the European scene. Former enemies became good friends. The French and Germans, who had fought three savage wars in seventy years, began to work in close and constructive cooperation.

The world is a very different place from Western Europe. But a workable strategy for building world peace will be essentially similar to the strategy that worked so well in Europe. Thus, what the SALT talks need most is not, as some appear to believe, an omniscient computer which links missile inventories, throwweights, ranges, relative accuracies and a thousand other variables in one magic formula. What they need most is another kind of linkage: a linkage of an arms control strategy with an imaginative strategy for building world community. Without such a linkage, the SALT talks will fail sooner or later. With it they can, and it is to be hoped, will succeed.

The salt water talks could play a major role in devising a community-building strategy. A law of the sea treaty which mandates—and funds—an effective antipollution strategy, a law of the sea treaty which mandates—and funds—a multi-billion dollar economic development program—such a treaty could excite the interest and imagination of men and women everywhere.

Such a treaty would require a major change in the direction of the giant Conference. In particular, it would require a conscious decision that the common heritage will include a substantial portion of the revenues from offshore oil and gas. The present text awards all that wealth, the cream of the common heritage, to the coastal state and most of it to a handful of nations, most of them developed nations.

In a word, there must be sharing of the immense mineral wealth of the 200-mile economic zone, and not just the much less important wealth of the deep ocean. One interesting sharing proposal is the so-called "*Barba Negra* Formula." It is the central part of an "Appeal" to the Conference adopted by law of the sea diplomats and others during a sixty-mile sail from United Nations Headquarters out into the Atlantic Ocean. The sail on the square-rigger *Barba Negra* took place on August 22, 1976. The *Barba Negra* formula provides for graduated sharing of mineral revenues within the zone. It would require the poorest coastal states to contribute only one percent of their economic zone mineral revenues to a World Common Heritage Fund and the richest to contribute as much as twenty percent. The Fund would get three billion dollars a year now and considerably more in the years to come.

To change the Law of the Sea Conference's direction, to make it "come about," will be a very difficult task. The first step will be to persuade the delegates to cut through the fog of ideology, legalese and bloc politics and ask themselves two key questions: Is a giveaway treaty a good way to build peace? Will a giveaway treaty help the struggle for a new and more just international economic order?

Pardo, universally acclaimed as the father of the Law of the Sea Conference, has given his answer to those questions. In 1976, speaking of an earlier but essentially similar treaty draft, he said, "It will enormously increase inequality between states and consequently world tensions and conflicts." It is scandalous but hardly surprising that the preamble to the present treaty omits the word "justice" and does not even mention "the common heritage of mankind."

There is broad agreement that the Conference is in deep trouble. The conventional explanation for that trouble centers on the bitter struggle over the nature and powers of the proposed International Seabed Authority. But that struggle is a symptom, not a cause. The real cause of the trouble is much deeper. It is the betrayal of the common heritage by the leading nations in the Conference and not least by the United States which, in August of 1976, proposed a very generous sharing plan, a plan which it quickly abandoned.

To understand what has happened to the common heritage, one has to understand that if Pardo's 1967 plan had been adopted it would now be producing at least twenty billion dollars a year in common heritage revenues. The delegates know that twenty billion dollars a year could do a great deal to promote peace and justice. They know that twenty billion a year is more than sixty times the tiny amount—three hundred million dollars a year—which the Seabed Authority is expected to produce in 1987, i.e., ten years from now, if the present text is adopted. They know that three hundred million dollars a year can do next to nothing to solve the problems of a world of six billion people.

The atrophy of the common heritage has had a curious but little noticed effect on the Conference. It is making the Third World countries take a much more ideological approach to the nature and powers of the proposed Authority. They seem to be saying that if the common heritage won't bring meaningful revenues for the Third World, as everyone assumed it would, then at least the Third World must get an ideological dividend from the Conference. This will be accomplished if they get a strong Authority with powers not only to fix prices and to limit production, but also to ride roughshod on any private or state corporations which want to exploit the nodules in the deep ocean. In this view, the Authority's value does not come from what it produces. Indeed, some nations want it to produce very little. Its value is rather in how much power it has. It is as if the greater its power the more valuable it will be as a symbol of the radical, "new international eco-

nomic order" which certain Third World countries are championing.

Meanwhile the head of the U.S. delegation, Ambassador Elliot Richardson, has voiced his feeling that Congress will not and should not approve the ICNT unless the articles on the Authority are drastically changed. If they are not, it is quite likely that Congress will defy the Conference and "go unilateral," i.e., it will authorize U.S. companies to mine the deep seabed and give them financial guarantees in the bargain. If legislation of this sort becomes law it may well sink the Conference.

It is admittedly very late to talk of a major change of course in the Law of the Sea Conference. Yet such a change is essential if the Conference is to write a worthwhile treaty and a treaty that will last. Such a treaty could help set the stage for a meaningful arms limitation treaty. It is time for Cyrus Vance and Elliot Richardson to sit down together. They, and their counterparts in every country, should begin to ask how the SALT and salt water talks can help each other. Law of the sea negotiators would not be so vulnerable to special interest groups if they could persuade the general public that the law of the sea treaty they are championing would be a major step toward peace, justice and economic and political stability. And meaningful SALT agreements would be much easier to achieve if the nations of the world were already working together to save the seas and to use the wealth of the seabeds to promote peace and justice.

A bold and generous treaty, a *real* common heritage treaty, will be easier to complete and to sell than the giveaway treaty now before the Conference. For a bold and imaginative treaty will permit practical compromises on problems, such as the Seabed Authority, which are almost insoluble when they are approached, as they are now, in a doctrinaire spirit. The same spirit of accommodation will permit compromises on problems of arms control and disarmament which now appear to be insoluble.

Could ordinary men and women—here and abroad—be excited by the prospect of a bold and generous law of the sea treaty? I believe they could. In July of 1976 almost all of us were moved by the visit of the tall ships to New York City. But when, less than a month later, the giant Law of the Sea Conference came into the city almost no one knew it was there.

If the Conference would raise its sights and its sails I believe that a new wind would fill its sails, the wind of an informed and enthusiastic public opinion.

Where are the Jean Monnets and George Marshalls of the oceans?

We need them badly.●

THE BROADCAST OF SENATE DEBATE

● Mr. PELL. Mr. President, now that the Senate consideration of the Panama Canal treaties is history, I wish, as chairman of the Committee on Rules and Administration, to take note of another historical event that accompanied the debate: That is the broadcast of the entire proceeding live—directly from the Senate Chamber.

Senate Resolution 268, submitted by the distinguished majority leader, Senator BYRD, the distinguished minority leader, Senator BAKER, and other Senators, directed the Rules Committee to provide for radio and television coverage during the debate. It was not possible to arrange for television coverage due to the difficulty of properly lighting the Chamber.

However, it was possible to provide radio coverage without modification of our existing voice amplification system and without disruption to our procedures. National Public Radio, through its president, Mr. Frank Mankiewicz, agreed to provide gavel to gavel coverage and to distribute all speeches to its affiliated stations. Of course, local stations were free to use or reject network material as they saw fit. I am pleased to note that a survey commissioned by National Public Radio (NPR) estimated that some 14 million persons listened to the debate during the first 4 weeks.

Linda Wertheimer was the NPR correspondent during all 38 days of the debate. Robert Siegal and Mrs. Wertheimer produced the nightly summaries. Mrs. Wertheimer sat in the gallery and identified each speaker for the radio audience. Gary Henderson was the engineer who supported Mrs. Weitheimer. Although they were seated in the front row of the radio-TV gallery, I am not aware of a single complaint that their activity caused any distraction to our proceedings. They helped us prove that broadcasts can be conducted without disruption to Senate procedure. My congratulations to them all for an excellent job.

The commercial networks also operated an audio feed from the Chamber which they used in various ways. I welcome reports from the networks on how this material was broadcast and how many citizens heard it. I believe the whole Senate would be interested in that also.

Finally, a reminder that as directed by Senate Resolution 268, the Library of Congress Recording Laboratory recorded the entire proceedings. Copies of any portion of the debate may be obtained by calling the Library of Congress Recording Laboratory at 426–5508.●

WHY THE JAPANESE YEN IS BIG NEWS: HOW IT MATTERS TO THE AMERICAN CITIZEN

● Mr. GLENN. Mr. President, the Japanese yen is big news today. Every week we see new headlines about a declining dollar in terms of the yen. Does this news matter to the average U.S. citizen? Does it affect him in any significant way? The answer is an unequivocal and important yes. Japan is the second largest trading partner of the United States. It imports some $11 billion of U.S. goods, and in turn exports roughly $18 billion to the United States.

As Japan's economy goes, so goes the rest of Asia. Its rapid growth has spurred growth throughout the Asian region. Japan's economy dominates the health of Asia. United States trade with Asia has grown rapidly and for 6 years has exceeded total U.S. trade with nine major European community nations. Two-way trade with Asia, including services, totals $60 billion of which slightly more than half is with Japan. Japanese markets are especially important to U.S. farmers, to producers and workers in the forest product, coal, chemical, machinery, and appliance industries. Japan's dependence on global trade is the single most salient point of its external policies. Thus, although we have legitimate concerns, we must proceed carefully to avoid rupture to our bilateral relations and adverse domestic effects in Japan. The importance of U.S. agricultural exports to Japan is particularly striking. It is little known that more land in the United States is dedicated to feeding the Japanese than is land in Japan. Less than one-fifth of Japanese land can be agriculturally productive, thus one-third of U.S. farm acreage is devoted to crops produced for export. The dollar volume of these sales to Japan was $3.8 billion last year. More important, the Japanese economy is now the world's third largest, behind the United States and the Soviet Union, and has a significant effect on the world economy. Japanese demand, especially raw materials, from other Asian and European countries affects growth rates, employment, and in turn the rates at which these nations import goods from the United States and other trading partners.

WHAT IS THE SIGNIFICANCE OF YEN APPRECIATION?

The yen-dollar rate of exchange should reflect mainly the relative international competitiveness of United States and Japanese exports of goods and services. This rate determines the price which United States and Japanese goods exchange in the international market.

The yen has appreciated dramatically from the rate of 360 yen per dollar which held steady between 1948 and 1971. With the beginning of floating exchange rates of 1971 the yen began a series of progressive appreciations. In 1977 the yen rose against the dollar by 22 percent, with 15 percent of the appreciation taking place in the second half. In March of this year the dollar started a drastic slump against the yen, slipping to 218 yen to the dollar in early April.

This means that the same volume of Japanese exports which cost $1 billion in January 1977, would now be worth $1.35 billion in April 1978, if the yen prices of these goods remain constant.

From the Japanese viewpoint, while their export prices in dollars have been forced sharply higher, they are able on the other hand to buy imports a third more cheaply and must pay only $670 million for goods that cost $1 billion in 1977. This advantage would of course be somewhat less if the producer country prices had increased.

Thus, the immediate result of yen appreciation has been to exaggerate the size of Japan's trade surplus. Clearly, if neither Japanese export nor import volume in 1978 changed from 1977 levels, with its export value up a third and its import value reduced a third, its trade surplus would show a large increase in dollar terms. This is the so-called J-curve effect which economists refer to in their writings about trade adjustments in a floating exchange rate system. It is at the root of our present bilateral trade imbalance.

Over the longer period, however, the yen appreciation should discourage Japanese exports as their prices rise, and should encourage greater imports by the Japanese economy. Theoretically, this will lead to a gradual reduction of Japan's massive trade surplus. But, it is

not yet clear how long it may take for these volume changes to offset the aggravation of Japanese surpluses caused by value changes resulting from appreciation.

In Japan's fiscal year 1977, which ended March 31, 1978, its trade surplus (goods and services) is about $16.5 billion. Despite the rapid appreciation of the yen against the dollar, the Japanese current account surpluses (the trade surplus minus services and associated costs) continues to grow. It rose from $4.7 billion in fiscal year 1976 to about $14 billion in fiscal year 1977. Roughly half of this $10 billion increase resulted from the J-curves/effects of currency evaluation. The gain in surplus from the increased excess of exports over imports, by volume, accounted for about $5 billion of the increase.

THE YEN-DOLLAR RELATIONSHIP

The yen-dollar exchange rate reflects the difference in relative international competitiveness of their exports and the relative purchasing power of income within each country. This relationship, however, is complicated by numerous additional factors. It is important to try to understand these factors, because of a present tendency by some in each country to blame the other for the persistence of sharp changes in the yen-dollar rate.

The major additional factors influencing this exchange rate include:

Cyclical differences in growth rates,

Structural rigidity in economy which complicates adjustments to floating exchange rates,

Anticipatory speculative actions by traders and major holders of the two currencies, and

Exaggeration of changes in the current account balance of Japan caused by the J-curve effects.

CYCLICAL DIFFERENCES

The U.S. economy has grown at somewhat above its long-term trend in 1977, while most industrial nations were growing at significantly lower rates. This has caused the United States to draw in more imports to support its rapid growth, while finding weak export markets in slow growing foreign economies. In addition, the United States faced the unique problems of rapidly declining domestic oil and gas supplies and even though its consumption of energy grew moderately, imported oil cost an astounding $45 billion in 1977.

Japan grew well below its long-term trend. Even though its 5.3-percent growth appeared relatively high, it was far below the 10- to 11-percent real growth of Japan's recent preembargo years. This has meant that Japan's requirements for imports were quite depressed. Low domestic demand encouraged more intensive efforts to export. These benefited from an early undervaluation of the yen, which permitted it to make inroads against domestic production both in Europe and the United States. The higher rate of growth in the United States made it a particularly attractive market.

STRUCTURAL DIFFERENCES

Both United States and Japanese economies have certain structural peculiarities which make it much more difficult for their economies to adjust to the new floating exchange rate system. With its very strong export orientation, a historic preference for minimizing or avoiding imports, and its decided cultural preference for domestic products, Japan has tended over the past two decades to depend heavily on expansion of its exports to lead the growth of its economy. They are a "processing" nation; they import resources and materials, process, add value, and export.

Japan has become an economy in need of "affirmative action" to encourage imports. Consumer goods, in particular, could help the Japanese achieve better growth rates while offsetting trade and current account surpluses. The recent purchase mission ($1.94 billion) which toured the United States is a step in the right direction. But, the all powerful ministries (Finance and the Ministry of International Trade and Industry) must act to remove nontariff barriers. The Japanese Government can do much to fulfill the MITI assertion of September 6, 1977 (Japanese Markets: The Myth and the Reality) that they welcome the importation of foreign products. Although the Japanese have liberalized some quotas in January, the application of standards, customs practices, government purchasing policies, subsidies to certain industries are all barriers. I shall discuss these at greater length in my upcoming report to the Senate Foreign Relations Committee on Japan.

Despite the general recession in world trade, Japan has continued this export dependence and import minimization. In fact, the oil shock of 1973 intensified Japan's concern to maintain healthy export competitiveness.

The United States, by contrast, has had an extremely strong orientation to the domestic market, accompanied by a traditional openess to imports. Its relatively stronger recovery from the recession of the early seventies has produced an exaggerated import growth, and also increased the attractions of producing for the domestic as opposed to the export market. Hopes that a cheaper dollar in the floating international exchange markets would help us to overcome our growing trade deficits have not materialized. Two factors account for this: first, the continued competitive strength of non-Japanese foreign suppliers, and, second, the outdated competitive skills of U.S. producers in the international export markets, U.S. competitive strengths have been eroded to some extent by changes in U.S. tax laws which increase the cost of maintaining U.S. nationals abroad to represent U.S. products, by the growing cost of representation caused by foreign currency appreciations, and, more importantly, by uncertainty about U.S. policies on U.S. Government assisted export credit, investment abroad, and export incentive programs such as DISC.

It is not surprising that exchange markets have had a difficult time in anticipating how quickly the United States and Japanese economies could adjust their import and export volumes to changing exchange rates, given the strength and magnitude of these structural ridgidities in the two economies. Political leaders in both countries have the same difficulties.

ANTICIPATIONS: LEADS AND LAGS

It is now particularly hard to determine underlying trends in present Japanese trade. The rapid recent appreciation of the yen creates considerable motivations for exporters to accelerate their shipment in order to sell more before further yen appreciation, to beat expected increases in shipping rates, and avoid impediments expected by an anticipated dock strike on the U.S. west coast late this spring. Some exporters may also have pushed hard to maximize exports before the end of Japan's fiscal year ending March 31 in order to build a larger base level of 1977 exports, should there be subsequent Japanese Government or negotiated limitations on exports in Japanese fiscal year 1978. Similarly, on the side of importers, there is incentive to delay imports in hopes that if the yen rises further, they will become still cheaper. These actions, as a category, are known as the leads and lags, and they usually accompany any period of substantial exchange rate pressures.

J-CURVE

As the yen appreciated rapidly to reflect the growing strength of Japanese exports and its trade and current account surpluses, the rising price of Japanese exports reduced the competitiveness of some Japanese products abroad and slowed or reduced their export levels. As the yen grows in value, it tends to exaggerate the value of exports and reduce the dollar value of imports causing an exaggeration of current account surpluses in dollar terms. This phenomenon may have caused currency markets to exaggerate the strength of Japan's underlying trade position. Some Japanese believe this monetary illusion caused speculators to over-price the yen. Others believe, however, that yen rates merely reflect the larger volume of dollars seeking to buy yen. Until there is some extended period of stability in the yen-dollar rate, it will be difficult to determine how long it will take trade volume changes to overtake the valuation effect caused by appreciation.

WHAT ARE THE MAIN FACTORS IN YEN TO DATE?

Historically, the dollar has stabilized against other currencies earlier than it has in recent weeks against the yen. This appears to reflect a belief that there are special circumstances in the Japanese economic situation which warranted further appreciation of the yen. Among the more visible factors which might explain the difference are two in particular. The first is that Japan has continued to report high and rising monthly surpluses in its current account, and has had a much larger surplus relative to its total trade than has Germany, which shows also a more level or slightly declining trend in its current account surpluses. Another factor has been the clear effort of the Bank of Japan to support the yen at particular rates, rather than simply intervening to smooth out market dis-

order. As a result Japan has accumulated very large increases in its foreign exchange reserves over the past several months. These are a further signal to those in the market who look for signs of over- or under-evaluation of currencies. In addition, Japan has shown generally a more favorable trend in unit labor costs than have European economies. These are a good indication of future export competitiveness.

IS THE PRESENT RATE SUITABLE TO MOVE JAPAN TOWARD BALANCE IN ITS TRADE AND CURRENT ACCOUNT EARNINGS?

Since the dollar value of exports and imports is distorted by exchange rate changes, the best evidence to evaluate the effect of exchange rate changes is the data on the volume of import and export flows. Unfortunately, the evidence to date is still confused and indeterminate, because of the numerous anticipatory factors which may significantly distort the timing and volumes of current Japanese trade flows. The best indication we have to date that yen appreciation is having a substantial effect on the Japanese economy and on trade adjustment comes from data which suggest that appreciation has reduced the growth rate of the Japanese economy from an expected rate of 6½ percent in fiscal 1977 to a rate of around 5 percent. This development appears to reflect the belief that yen appreciation has had a substantial impact in reducing the competitiveness of a number of Japanese export industries, particularly textiles, simple consumer electric appliances, radios, television, ship building and a variety of industrial and textile chemicals. As a consequence of this, an abnormally high number of 1,500 smaller Japanese firms are declaring bankruptcy per month. There is corresponding indication that exporters from Korea, Taiwan, and other industrializing nations have taken over increasing percentages of former Japanese markets in these products during the past year.

WHAT ARE THE EFFECTS OF YEN APPRECIATION ON THE JAPANESE ECONOMY?

Japan's strongest and most profitable export industries, such as automobiles, sophisticated electronic products, and certain types of steel products have been able to raise dollar prices more or less in step with yen appreciation, without losing much export volume. Some Japanese producers in these industries have been able to pay off debts and are in extraordinarily strong financial condition. Weaker, marginally competitive industries face very different problems. Since they have barely been competitive at earlier yen levels, further appreciation forces them to absorb much or all of the further yen appreciation. An increasing number of Japanese industries have thus faced progressively greater financial difficulties as yen appreciation proceeded. This has reduced earnings, increased indebtedness, caused producers to toughen up on dealings with smaller part and service suppliers, and has forced an increasing volume of business failures. Since most Japanese firms already have much higher ratio of debt to equity than in the United States (in the vicinity of 60 percent debt financing on average), and since Japanese firms have lifetime commitments to a significant proportion of their labor, the heavy fixed costs on business have forced them to continue efforts to produce as long as they could sell above average variable costs.

Because Japanese banks to a large degree are government controlled in their commitment to Japanese industry, banks prefer to continue extending credits during difficult periods rather than see massive bankruptcies occur. Thus, many Japanese firms are heavily indebted. A tendency for interest rates to come down more slowly than the cost of living has also tended to produce unusually high interest burdens during this difficult period.

Under these circumstances, it is hardly surprising that the major effect of yen appreciation cn trade accounts thus far is a more rapid decline in import volumes than in exports. This may reflect attempts to reduce inventories of raw and semifinished materials, and even to cut back inventory levels to reduce overall costs. In addition, some importers may be delaying imports in hopes of buying raw materials more cheaply if yen appreciation progresses further.

Thus, yen appreciation has had some contrary effects. Appreciation depresses business and investment activity in Japan and discourages imports. Thus, effort to expand U.S. imports face great difficulty in the near term. Nevertheless, these efforts must continue for it is only by this process coupled with a better Japanese economic situation that will allow sizeable reductions in the trade imbalance. Efforts by the Japanese Government to overcome these depressing effects by expanding deficit financing have run into further yen appreciations, which have tended by and large to offset the additional stimulus as quickly as it has taken place. Despite a large increase in the government budget and its deficits for fiscal year 1978, the great majority of economic forecasts expect that because of yen appreciation, the Japanese economy will barely hold its own and maintain the current rate of approximately 5 percent annual growth.

Japan is now faced with a record high budget deficit of 37 percent. This is significant, and is the first time in more than two decades the Japanese have broken an arbitrary 30 percent level. Therefore, it is an important sign of the earnest and sincere commitment by Prime Minister Fukuda's government to resolve our mutual economic problems. There is great frustration and resistance in both government and Diet circles to further increases in the size of the government budget deficit since these increases have been less effective than hoped. In recent weeks there has been an increasing sense that Japan has run out of additional policy measures it can take to stimulate the economy and achieve the kind of reductions in trade surplus which it has set as its targets.

What is little understood is that most Japanese exporting industries still depend predominantly on the domestic market for 70 to 80 percent of their demand. Thus, they are well positioned to take savings on raw material import costs resulting from yen appreciation and pass these benefits through in export pricing. For a time, at least, Japanese companies may be able to survive yen appreciation by selective pricing.

In summary, the Japanese economy is unusually resistant to exchange rate changes in adjusting its current account balances, primarily because of the strong priority given to export business by both industry and government and because of a traditional preference for domestic over foreign suppliers.

EFFECTIVE YEN APPRECIATION AND JAPAN'S SURPLUS IN THE UNITED STATES

Many economists in the United States have hoped that floating exchange rates and a depreciated dollar, by making U.S. goods cheaper abroad, would help U.S. competitiveness and move us significantly toward reduction of our massive current account deficit.

It is ironic that the United States and Japan may prove to be the two major free world countries least adapted to quick adjustments through floating exchange rates. For Japan this is so because of its intense export orientation in business and government, the intense loyalty of Japanese firms and consumers to domestic products and business relations. Thus, Japanese exports tend to respond less to the discouragements of yen appreciation, and imports may respond still less.

For the United States, much of the opposite is true. We have a major domestic orientation in both business and Government. Since foreign sales affect one of six jobs and one-third of our agriculture, exports markets are significant and will become even more important in the future. Yet, our financial institutions and tax laws are not as oriented to export facilitation as are those of Europe and Japan. Nor are U.S. producers as oriented to expanding market shares as their foreign competitors.

In addition, the United States has recently invested a much smaller percentage of GNP in upgrading productive facilities. This results in lower rates of gain in productivity and in less offset of inflation with a lower overall level of investment, because the United States must adapt its productive facilities to changing competition from abroad. With a lower rate of productivity investment, we are also less able to take advantage of sales opportunities resulting from dollar devaluation.

Similarly, U.S. firms tend to have a strong aversion to budgeting large current expenses for market development. Such expenses are particularly important in developing a Japanese market, which is unusually complex and expensive, but which produces large rewards in consumer loyalty once achieved. An alternative is for U.S. investment in production facilities or distribution facilities in Japan. Acquisition of Japanese firms is uniquely difficult and investment costs are very high. As a result, U.S. investments in Japan are relatively limited. American firms, facing the double difficulty of having to expand market development and being unable to invest, too frequently resort to leasing or selling their technology as

the line of least resistence to achieving some return on the Japanese market. Given the great speed and agility with which Japanese firms absorb, adapt, and improve on required technology, it is rarely long before purchasers of U.S. technology are effectively outcompeting their supplier with innovations of their own in third-country markets and even in the United States.

Another difficulty arises from our relatively weak interest in export sales. U.S. firms have discovered, now that their products are relatively lower priced in Asian markets, that they are often unable to win against Japanese and European competitors which are increasingly depending on highly competitive financing offers.

The conclusions we can draw from these considerations are that the United States will remain considerably disadvantaged in trying to capitalize on yen appreciation in exploiting its commercial opportunities in Asia. The implication is that generally speaking the dollar may have to also devalue further to achieve a given amount of trade adjustment by the United States than would be the case for most other industrial nations. The further consequence is that the inflationary effects of devaluation may be relatively greater for the United States. These inflationary effects in turn generate a partial offset to the competitive advantage which dollar depreciation provide.

If U.S. Government and business practices were not at a sufficient disadvantage already, there has been a trend in recent legislative and policy decisions to propose changes which may further hamper U.S. competitiveness abroad. These include proposals for restricting tax exclusion of Americans working abroad (section 911 of the Tax Reform Act of 1976) and for elimination of tax deferral and the DISC.

WHAT ARE THE IMPLICATIONS FOR U.S. POLICY?

Only Japan can resolve the massive and growing trade and current account surpluses which its policies produced during the past year. The United States must certainly continue to press Japan for effective implementation of the key elements of the Strauss-Ushiba communique of January 1978. Our Government should remain especially persistent in pressing Japan to make a full equitable contribution to the success of the multilateral tariff negotiations, to maximize its domestic growth, to establish the degree of import liberalization needed to offset its strong export earnings, and to expand its foreign aid while untying it from its "buy Japan" orientation thereby neutralizing international perceptions of Japan's mercantilist policies.

Japan has done much in the past 6 months to demonstrate that it intends to reach its targets for national growth and for reduction of its current accounts trade surplus. It has also demonstrated a willingness to take supplemental measures to the extent that existing actions appear insufficient. The U.S. Government must continue to work closely with the Japanese Government to assure satisfactory progress. We have also become increasingly aware that the United States bears responsibilities in this area. The early passage and implementation of an energy program is essential in this respect. In our relations with Japan moreover, our earlier discussion should make clear that the United States would not automatically benefit even if Japan fully realizes its growth and current account targets. While our exports of food and raw materials to Japan will undoubtedly improve as Japanese income levels rise, it is much less likely that our manufactured exports will increase their share of the Japanese market without more vigorous efforts on our part.

In view of the substantial disadvantages that I previously identified to an effective competitive U.S. selling position abroad and our declining export position in manufacturers, our first step should be to minimize further aggravation of the disadvantages the United States suffers in international markets. This requires assessment of the impact of all major legislation involving taxes, social overhead cost and other provisions with significant effect on investment and sales decisions on U.S. firms, and to identify the extent to which this legislation affects or is likely to affect U.S. competitiveness. It should also include an OECD conference to reconcile distortions in the trade flows caused by different domestic tax practices.

A second step would be to review the adverse effects of legislative and executive actions taken or proposed over the past 2 years. This review should include reassessment of section 911, close consideration of tax deferral proposals, as well as review of environmental impact and other provisions which may put the United States at an unreasonable competitive disadvantage. Tax deferrals may be far from a perfect incentive for exports, but serious consideration should be given not to dismantling these provisions until we have found some alternative approach to export promotion which is more cost effective.

A third step is to reassess U.S. policy and efforts with regard to international export credit competition. Thus far our negotiators have had very little success in strengthening international agreements to limit self-defeating competition in this field. One reason may well be that we lack leverage for discouraging unreasonable practices by others. One alternative approach to increasing our leverage which I believe may be necessary would be to authorize greater flexibility for the U.S. Export-Import Bank to match the practices of others much more fully, so that we have strength of a competitive position with which to negotiate moderation by others.

A fourth step is to assess thoroughly the various aspects in which the United States demonstrates structural and practical disadvantages in competing in international markets. We must analyze the extent to which the lower level of U.S. capital investment as a proportion of GNP is slowing our growth and ability to adjust to international competition. Growing calls for protectionism throughout the world, the beginnings of strangulation of U.S. participation in international trade, and demand action.

These are matters which affect each and every U.S. citizen. They are matters of growing importance to this Nation and to the health of the international economy we lead. It is, therefore, incumbent on this Congress and all concerned citizens to give this topic high priority attention over the coming months. This year when the success of the multilateral trade negotiations will be determined is a particularly fitting year for us to address these problems with utmost intensity and urgency.

We have for 33 years pursued a policy of encouraging democracy in Japan. If we seek a freely oriented, free market Japanese economy—a situation I believe that reinforces democracy—we must be willing to meet economic competition head on. Japan's success in world markets reflects a diligent people, efficient companies, extensive market research, and aggressive salesmanship. This reality cannot be avoided. There remain some Japanese policies designed for the fragile economy of the early 1950's, and these should be eliminated. But, the United States must also seek certain corrective actions. We must do these things together. If we do not, two major engines of the non-Communist world will halt, perhaps even reverse. Such a reversal would endanger democracy—everywhere.

That cannot happen. With diligence, with cooperative effort, and above all, with patience and understanding, economic frictions between sovereign friends and allies will be manageable.●

A FRESH INSIGHT ON ENERGY

● Mr. KENNEDY. Mr. President, as public discussion and congressional preoccupation with the national energy plan continues to be clouded by high rhetoric and incomprehensible data, occasionally a voice of commonsense is heard above the din. I was struck by the no-nonsense approach of Lewis Lapham, editor of Harper's, in his recent speech to the Edison Electric Institute: Lapham argues that businessmen, bureaucrats, and sheiks share common interest in keeping prices up and issues clouded when it comes to energy. His speech is both entertaining and thought provoking, and I ask that it be printed in the RECORD.

The speech follows:

THE ARABIAN OIL BUBBLE

In the newspapers lately, as well as in the journals of refined policy opinion, I notice that the promoters of the "energy crisis" have shifted the emphasis of their spiel. Instead of talking so much about the failing supplies of hydrocarbons in the world, they have been making more ado about the infamous OPEC cartel.

Perhaps this is because in recent months enough information has leaked through the mythmaking apparatus of the press to cast doubt on the predictions of the earth's insolvency. The world market at the moment wallows in a glut of crude oil, and every few weeks yet another renegade economist or research institute mentions the abundance of oil and gas reserves. But even the economists who project a condition of surfeit as opposed to one of scarcity quickly recover their sense of patriotism alarm and go to talk about the sinister conspiracy in the Middle East.

About the omnipotence of the cartel all the authorities agree.

On Wall Street the bankers sigh and accommodate themselves to the inevitable dominion of the cartel as if it were an obligation pressed upon them by David Rockefeller or the Downtown Association.

The politicians in Washington talk about foreigners extorting ransom from the American people, and President Carter raises up both a bureaucracy and a national energy plan to protect the innocence of American enterprise from the capricious despotism of an indolent Arab.

This catechism has been so often repeated, not only by government officials and oil company presidents but also by newspaper columnists and the grand viziers of American foreign policy, that it has acquired the sanctity of dogma. Were it not for the high price of oil in the Persian Gulf, so runs the antiphon in the sacred text, the United States would regain its confidence, restore its credit, rescue its currency, and go forward to its appointment with manifest destiny.

The apparition of an OPEC cabal, unfortunately, has as little substance to it as does the companion stage effect of a world emptied of all its heat and light. The consensus of conventional alarm reminds me of what Stewart H. Holbrook, writing in *The Age of the Moguls*, said about Teddy Roosevelt's theatrical belaboring of the mammoth trust: "(He) knew a good safe menace when he saw it."

The belief in the cartel's omnipotence serves so many domestic interests that I often wonder what the American managerial class would do without it. If the cartel was everything that people said it was, I would expect to find bankers selling their Long Island estates and moving to Switzerland; I would expect to hear of admirals convening press conferences and leaking to Congressmen confidential documents showing that the United States Navy no longer could guarantee the hegemony of the oceans, I also would expect an atmosphere of anxiety and haste.

But instead of this I find people muttering about "the Arabs" and worrying about the regulated price of natural gas, ask if they had all the time in the world to consider the fine points of social equity. In Washington the politicians and federal bureaucrats go about the business of commissioning opulent architecture, and in New York nobody thinks to object to the design of yet another glass office building on the ground that it might be wasteful of energy.

The dreamlike character of the crisis suggests that to the American managerial class the OPEC cartel subsumes all the ambiguity of human existence into the convenient abstraction sometimes known simply as "them." The working class achieves the same result with diatribes against "the big shots," "the government," or "Octopus Oil."

Before going further with this speculation, I probably should explain that I was raised within the bosom of the American oligarchy. Various members of my family have been in various sectors of the oil business since the 1890s, and as I have listened to them talk about their troubles over a period of thirty years, I have understood that the business suffers from a condition of chronic glut.

There is always too much oil and gas in the world, and so the problem is always the same—how to restrain the trade. Nobody makes any money unless he can figure a way to control either the production, the distribution, or the price of oil. Old John D. Rockefeller achieved his purpose with hired bullies and a talent for monopoly.

His successors, most of them far more timid individuals who have inherited the stewardship of the American hierarchies, take an administrative rather than an entrepreneurial view of the world. Whether employed by banks and corporations or as functionaries within the federal government, they like to think of themselves as gentlemen.

They have no particular fondness for colossal profits, which tend to frighten them and to interfere with their affectation of conspicuous frugality. They aspire instead to serve the institutional machinery, to retain those privileges accumulated on their behalf by their primitive forefathers. They look with disfavor upon too much prosperity.

Prosperity implies ferment, in the economy as well as in politics; the subsequent disorderliness encourages people to think and to take risks, and this in turn leads downward into the abyss of social change.

Although they admire old Mr. Rockefeller's accomplishments, they deplore his methods, and so they prefer to achieve the same result in more decorous ways, either with federal regulation and environmental reform or with a devout belief in such happy accidents of fate as the exhaustion of the earth's resources and the advent of the OPEC cartel.

I will try to be more specific. Having begun to doubt the immaculate conception of the Muslim cabal, it occurred to me some months ago to wonder what would happen if the cabal lowered the price of oil. For all practical purposes the cartel revolves around Saudi Arabia, which produces about 8.4 million barrels a day and has reserves sufficient for another 150 years of extravagant use. The Saudis produce so much oil at so low a cost (30 cents a barrel) that they establish the price of oil in the world market. The spot price, Arabian Light Crude, F.O.B. Ras Tanura, is currently $12.60 a barrel.

But what if the Saudis chose to sell a barrel of oil for $6? Certainly they could afford to do so. Money is hardly a scare commodity in their society; their kings and princes often have said that they would prefer to hold the oil in the ground. If not the Saudis, who then benefits from the high price of foreign oil?

Obviously the question is a political one. When a product sells for at least forty times the cost of its production, I assume that the price no longer has much to do with textbook economics. Over a period of several weeks this winter I raised the question with a number of people in New York and Washington, who have a financial interest in sustaining the fiction of perfidious Araby.

Without exception they looked upon the possibility of a break in the Saudi price as being destructive of their own interests. Although they thought that the United States as a whole would benefit from a cheaper price, they could foresee nothing but panic and confusion among their institutional confederates in the Department of Energy, the State Department, the international banks and oil companies, even the charitable foundations and the environmental organizations. Or, in the words of an investment banker familiar with the mechanics of oil and gas deals:

"If you ask me that question on the record, then I have no choice but to say, 'Yes sir, we have a terrible energy crisis, and the Arabs are awful people.' Off the record I can tell you that we have no crisis, and that the Arabs are doing us a service. If they cut the price, people would start going out of windows."

Like the other people to whom I put the same question, he offered a partial but fairly impressive list of American interests that find it convenient to languish under the tyranny of the OPEC cartel. As follows:

1. The international oil companies. Ever since OPEC quadrupled its price in 1973 the energy companies have reported steady gains in both income and government subsidy. The Saudis make the market price, and by so doing they perform the function of the old Texas Railroad Commission.

2. The financial institutions, primarily the banks and the insurance companies that underwrite exploration as well as the construction of pipelines, tankers, ports, and refineries. The investment of large sums of money calls forth correspondingly large commissions and fees. Without the OPEC cartel the Alaska pipeline might not have been built in such expensive haste. The pipeline cost $8 billion, and much of the money was paid to American corporations.

3. Any company, institution, or syndicate that has invested substantial sums in the development of exotic fuels or alternative energies. As has been noted, to the Saudis it doesn't make much difference whether they sell a barrel of oil for $12 or $6. But to anybody who hopes to make a profit by extracting energy from shale, tar sands, uranium, or liquefied natural gas (all of which imply production costs equivalent to between $10 and $20 for a barrel of oil) the guarantee of a high market price presents itself as a *sine qua non*.

4. The environmental movement. If the Saudis lowered the price of oil, the stock market probably would rise and money would find its way into equities and into the hands of the citizenry.

As every environmentalist knows, the citizenry cannot be trusted. People who believed themselves suddenly affluent would go around buying vulgar consumer goods with which to desecrate the landscape. The high price of foreign oil inhibits not only the building but also the conception of industrial development on too large and too indecorous a scale. It contains the suburbs, stalls the construction of highways and chain stores, obstructs the restoration of cities.

5. The sutlers and camp-followers selling their goods and services in the Persian Gulf. The Pentagon sells arms; the banks and financial institutions arrange expensive financing; other people sell real estate, computers, and political influence. The Bechtel Corporation last year undertook to supervise the construction of a port city in Saudi Arabia for $20 billion, which gives a fair measure of the scale of the enterprise.

In 1977 the United States reported a trade deficit of $26 billion, most of it attributed to the $42 billion paid for foreign oil. Even so, the United States reported a favorable balance of payments with Saudi Arabia.

6. The coal industry and its union. President Carter's energy plan recommends a conversion of oil-fired plants to coal, but if fuel oil were to become less expensive than coal, then the miners, no matter what their new contract says, could look forward to an extended period of unemployment.

7. Consultants and energy specialists with a fixed investment in what they have said. Together with their attendant data banks and research institutes they offer advice, information, and analysis (much of it useless except in the papier-mache world of contrived crisis to both government and the energy companies).

8. "The crisis industries." The arms merchants and the alarmist factions of the media have a considerable interest in preserving the belief that the United States wobbles on the precipice of defeat. Without the apparition of an insidious cabal they would have trouble selling their lines of goods to the Congress and the Book-of-the-Month Club. The cabal thus contributes to the well-being of the defense industry and its associated unions as well as to the circulation of the New York Times.

9. Politicians. The energy debate dwells on unknowable mysteries and thus bears a fortunate resemblance to a debate about the existence of God. The politicians can wax eloquent on a subject about which they need know nothing. Their theological discussions allow them to avoid or postpone the temporal matters of race, poverty, crime, and justice.

10. Exporters of manufactured goods. The weakness of the dollar, brought about in part by the imbalance of payments, gives an advantage to American goods competing against the exports of Western Europe and Japan.

11. The art markets. The high prices paid for furniture and paintings (as well as for coins, sculpture, houses in East Hampton, et cetera) presume a rising rate of inflation. If the cartel collapsed, the oligarchs who bestow tax-exempt gifts on museums and universities would lose not only the advantage of immense deductions but also the corresponding sense of their own worth.

The interests enumerated in the foregoing list all belong predominantly within the private sector of the economy.

They dwindle almost into insignificance when compared with the advantages that accrue to the federal government. The specter of a cabal, and of the sudden darkness that would descend on the United States if the Arabs were to embargo their shipments of light, supports the government's discovery of "an energy crisis" and lends credence to the need for a huge bureaucracy through which the government can award the political dispensations of money and fuel.

The Saudis now hold currency reserves estimated at more than $60 billion. Of this sum about $30 billion has been invested in U.S. government notes (Treasury bills and bonds), and another $20 billion has been invested in Eurodollars or in the paper offered by American corporations.

The arrangement constitutes an ingenious variation on the old colonial trade. The money leaves the private sector of the American economy (i.e., gets taken out of the hands of the spendthrift and irresponsible natives), passes through the wastes of Arabian desert (enriching the caravan of middlemen, brokers, consultants, arms dealers, et cetera), and so returns to Washington.

Thus does the government use the supposedly infamous cartel to finance its debt, manage the transfer of wealth within its own society, and impose savings on the American people. If the triangular trade happens to increase the rate of inflation, well, from the government's point of view, inflation also has its uses. Citizens give over more of their money in taxes, and the increased uncertainty in the economy calls forth demands for more bureaucracy with which to protect the innocent tribes from the rapacity of such imperial agents as Octopus Oil and the OPEC cartel

The Saudis invest their money in the United States as a form of Danegeld. The splendor of their tribute stills the voices of doubt and conscience. It also buys the protection of the American military machine against the possibility of reckless aggression from Israel and the Soviet Union. To the Saudis, who apparently take as literal-minded a view of religion as does President Carter, the United States stands as a bulwark not only against atheism and Communism but also against the forces of social change.

I concede that the government might not know exactly how or why all these pleasant things get done. If too many people took the trouble to wonder how the system works, they couldn't play their parts within it. To imagine an American conspiracy would be as foolish as to believe in the vast powers of the OPEC cartel.

As noted earlier, I don't think of the American oligarch as a rapacious man; I think instead of a man perpetually anxious, of Joseph Conrad's "flabby white devils" in Brussels sending Kurtz to look for ivory at the headwaters of the Congo. I think of men who don't want to make trouble, who would make a deal if necessary with any retired whore or fledgling dictator who offered them a concession in a bordello or the television rights to the making of a *coup d'etat*. Give them their percentage and promise them peace in their time, and they will smile and bow and sing a national anthem. The decay of American enterprise clearly cannot be discussed at the Council on Foreign Relations, much less in the newspapers, and so the crisis must be blamed on somebody else, preferably a foreigner.

Enter the damnable Arabs. The media find this convenient partially because they also stand within the American oligarchy and partially because they cannot bear to make princes of darkness of figures so obviously bourgeois as government bureaucrats and the presidents of oil companies.

How much more satisfying, to both the aesthetic and the theological sense, to imagine a Satanic Arab in a robe, wandering the world in a 747, sipping sweet coffee, fondling French women or small boys, playing baccarat for enormous sums while toying with the vague notion of destroying Western civilization. To the economic intellectuals, the Arab cabal appears as a *deus ex machina*. It explains the otherwise inexplicable conundrums of the international economy, and it redeems, as if by an Act of God, all previous theories and predictions that have been proven so fatuously wrong.

Best of all, the invention of a cabal makes a trivial melodrama of what otherwise might be perceived as the terrifying prospect of a world increasingly crowded with nuclear weapons and populated by people who are angry, poor, ignorant, and hungry.

If everything is a crisis, then nothing is a crisis; and the more enormous it can be made to seem, the less needs to be done about it. The American oligarchy can postpone the difficult business of thinking about what would happen if the supply of Middle Eastern oil suddenly was to become unavailable, and it can reduce the complexity of history to the size of a commodity speculation.

In the meantime, the aura of crisis flatters the vanity of all concerned. The managerial class has lost so much self-esteem in the past generation that it must be pleasant for people to imagine themselves once again in the presence of momentous events.

Just as the mythmaking about the Arab cartel obscures the nature of the understanding between the United States and Saudi Arabia, so also does it obscure the nature of the partnership between Octopus Oil and the federal government.

The gigantic institutional and financial combinations, in both the public and private sectors of the economy, honor one another's interests and recognize one another's prejudices as universal laws. From what I have read of the Saudi princes, they appear to have much in common with the moneyed oligarchs in New York and with the feudal bureaucrats in Washington. None of them likes to take risks.

If the possibility of intellectual freedom threatens the safety of Islam, so does the emergence of unregulated markets threaten the banks and the government agencies. The weakness of the dollar discourages expansion in the domestic economy and reduces the pressure of competition from abroad. If the stock markets atrophy, and if the common people can be made to see that their venturesome impulses bring them nothing but debt and taxes, then perhaps they will come to feel grateful for the protection of their institutional overlords.

As Saudi Arabian wealth becomes increasingly necessary to the American economy, I expect that it will lead to the further degradation of those people who think of money as an elemental force of nature. I sometimes wonder what it must be like for an American civil servant or foundation official, earning even as much as $75,000 a year, to spend his days tagging along behind a Saudi prince. What self-defeating fantasies of political and sexual conquest must trouble the poor fellow's thoughts while riding the evening train to Oyster Bay.

The contrived mechanism of the Arab ascendancy constitutes a bear raid on the American economy and the democratic idea. As with all bear raids, the advantage falls to the already rich. The available wealth accumulates in a small number of fabulous hoards—with the Saudi royal family, the international financial institutions, the federal government.

Measured over a short period of years, the lack of enterprise sustains the illusion of peace. But what happens when the capitalist princes can think of nothing else to do with their barbarism except to turn it inward, upon themselves? The sheen of money, like the ornamental engraving on Renaissance cannon, deceives them into thinking that they can escape the savagery of war.●

THE NOMINATION OF LYNN COLEMAN TO BE GENERAL COUNSEL OF THE DEPARTMENT OF ENERGY

● Mr. JACKSON. Mr. President, Members of the Senate have received a letter from David Cohen, the president of Common Cause, regarding the nomination of Lynn Coleman to be General Counsel of the Department of Energy. Mr. Cohen's letter, dated April 28, alleges that Mr. Coleman made a political contribution to his law firm's political action committee in March, when his nomination was pending before the Senate.

At my request, Mr. Coleman has prepared a response to the charges raised in Mr. Cohen's letter. Mr. Coleman's letter to me of May 1 indicates that the contribution was withdrawn from his partnership capital account without his knowledge. I ask that his letter to me and Mr. Cohen's letter of April 28 be printed in the RECORD for the information of the Senate.

The material follows:

COMMON CAUSE,
Washington, D.C., April 28, 1978.

DEAR SENATOR: On April 19 we wrote to you expressing our opposition to the nomination of Lynn Coleman to be General Counsel of the Department of Energy. Since that time we have learned important additional information about Mr. Coleman which bears directly on his ability to exercise sound and independent judgment.

As you know, Mr. Coleman has represented oil and gas interests for the last twelve years as an attorney for the Houston-based law firm of Vinson and Elkins. On November 18, 1975, Vinson and Elkins established a political action committee. Since its inception, the "Vinson and Elkins Good Government Fund" has made contributions totalling $47,400 to federal candidates and committees. A number of the contributions have been received by Members of Congress who sit on energy-related committees and subcommittees.

It is quite unusual for any law firm to establish a political action committee. Common Cause could identify only seven law firms which have political action committees.

Common Cause was amazed to discover that reports filed with the Federal Election Commission show Mr. Coleman making for the first time a campaign contribution to his firm's political action fund on March 9, 1978, one month after his nomination had been favorably reported by the Senate Energy Committee and five months after his nomination was submitted to the Senate.

According to the reports filed with the Federal Election Commission, Mr. Coleman's contribution was $725. Of the forty members of the firm who contributed to the firm's political action committee in 1978, only two made larger contributions than Mr. Coleman. The average contribution from law firm members in 1978 was $302, less than half that made by Mr. Coleman.

Mr. Coleman's political donation in the midst of his confirmation process demonstrates gross insensitivity. It also raises fundamental questions about Mr. Coleman's judgment and his understanding of the concept of conflict of interest. This is all the more true in light of the fact that the law firm's political action committee has made significant contributions to Members of Congress on energy-related committees and subcommittees.

As we have stated before, the position of General Counsel is an absolutely critical one at the Department of Energy. The person confirmed for this position must be free from actual and apparent conflict of interest and must be a person of sound judgment.

Mr. Coleman fails to meet these standards. The new information we have found only reaffirms that he should not be appointed to the sensitive post he has been nominated for.

We strongly urge you to vote against the nomination of Lynn Coleman for General Counsel of the Department of Energy.

Sincerely,

DAVID COHEN,
President.

LYNN R. COLEMAN,
Washington, D. C., May 1, 1978.

Senator HENRY M. JACKSON,
Chairman, Committee on Energy and Natural Resources, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Mr. David Cohen, President of Common Cause, wrote a letter to all Senators on April 28, 1978, stating that I recently had made a contribution to the political action committee of the law firm (Vinson & Elkins) of which I am a partner and that such committee has made contributions to Members of Congress. From these circumstances, Common Cause charged me with "gross insensitivity," questioned my judgment, and urged Senators to vote against my nomination as General Counsel of the Department of Energy.

Since no one from Common Cause offered me the opportunity to explain this occurrence in advance of the public release of its letter, I am writing to set forth the facts involved and put them in fair perspective.

I am in complete agreement with the concern expressed in the Common Cause letter that public officials and those nominated for public office must take precaution against the fact or the appearance of conflict of interest. Without question, the public confidence in the integrity of our governmental system at all levels has eroded in recent years. As one long interested in public service, I share the concern of Common Cause at the degree of skepticism which has followed that erosion. I would therefore personally regret even the remote possibility of anyone drawing an inference of impropriety in connection with the contribution discussed in the letter.

Partners in Vinson & Elkins created a political action committee in November 1975 in conformance with the statute and Federal Election Committee regulations. The committee is administered by partners in the Houston office of Vinson & Elkins and I have no role in collection or distribution of the committee's funds. Contributions are usually made by partners pursuant to authorizations given the committee to draw on funds in each partner's capital account. (I made such an authorization to the committee when it was established.) From these authorizations, the committee may draw funds as needed to make political contributions, the amount and timing of particular withdrawals being determined by those who administer the committee.

Some partners prefer to make political contributions to candidates of their own choice in lieu of making contributions to the committee. When this occurs, the practice has been to reduce the amount which the committee would otherwise be authorized to withdraw from their partnership capital accounts. In prior years I have made some personal contributions and am advised that, as a consequence, no withdrawal from my partnership account had been made. As indicated in the Common Cause letter, a withdrawal was made from my capital account, and reported as a contribution by the committee, on March 9, 1978. Ironically, I am told it was because I had informed the committee of no contributions within the last year that a withdrawal was routinely made by the committee pursuant to my prior authorization, without notice to me. Had I been aware that such a withdrawal was contemplated by the committee, I would not have permitted it.

To clarify a possible misimpression from the Common Cause letter, there is nothing illegal or improper about Vinson & Elkins having a political action committee, nor for that committee to make political contributions. However, it should be clearly stated that neither I, nor the Vinson & Elkins political action committee, has made any contribution to any Member of the U.S. Senate since long before the time of my nomination.

I regret the occurrence that prompted the Common Cause letter and understand how from the FEC record they were led to the conclusion expressed. For that reason, I make the above explanation for the use of the Senate in considering my nomination.

Sincerely,

LYNN R. COLEMAN.●

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

● Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Peter J. McLaughlin, of Delaware, to be U.S. marshal for the district of Delaware for the term of 4 years, vice John J. Smith.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Tuesday, May 9, 1978, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.●

CORRECTION OF A VOTE

Mr. BIDEN. Mr. President, on Wednesday, April 26, my vote was incorrectly recorded on final passage of the congressional budget resolution. Therefore, I ask unanimous consent to change my vote from "nay" to "yea" on vote No. 140, a vote on agreeing to Senate Concurrent Resolution 80 setting forth the congressional budget for the U.S. government for the fiscal year 1979. Changing my vote in no way affects the outcome of that vote.

The PRESIDING OFFICER. Without objection, the correction will be made.

SUN WEEK IN ILLINOIS

Mr. PERCY. Mr. President, Sun Day is upon us. The national day of celebration for solar energy is this Wednesday, May 3. Illinois has declared the entire week of May 1 through May 7 Sun Week. Schools and communities all across the State have responded enthusiastically to this opportunity to honor, display, and learn about ways to use the world's most reliable energy source. Judy Beck, the Illinois Sun Week coordinator, distributed a summary of the major events planned throughout the State. I ask unanimous consent that this summary be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUN DAY IS MAY 3

On May 3, 1978, communities throughout the United States will celebrate Sun Day. Just as Earth Day launched the environmental movement in 1970, Sun Day is planned to mark the beginning of the solar age.

Prorgams beginning in April and continuing beyond the Day itself will emphasize the viability of renewable, non-polluting energy sources and seek to make their development an immediate national priority.

Our nation's growing reliance on dwindling supplies of oil has contributed to inflation, a distorted foreign policy and short-sighted environmental policies. The controversy over the consequences and cost of nuclear power shows no sign of abating. And coal offers mainly a stopgap with its own environmental complications during a transition away from oil and nuclear power.

A major shift to new energy sources is inevitable. Fortunately, solar energy, including its derivative forms of wind, falling water, biomass conversion, and direct forms of heat and power generation, is an available option. While no single solar technology can meet our total needs, a combination of such methods can. Solar energy is technologically sound, economically realistic and environmentally attractive. Many uses are feasible now; others require mass production, government incentives and the research and development concentrations equivalent to those long given to other energy sources.

Unfortunately, many Americans remain unaware of the potential for solar energy. As with any developing technology, the first news on solar energy to reach the media has told of exotic applications and involved experiments. Many people still assume that solar energy is applicable to only a few areas of the country, such as the southwestern states. The simple facts about the natural energy that is with us every day have yet to be heard by many Americans.

NATIONAL SUN DAY

Sun Day's goal is to educate the public about solar energy potentials and to promote a transition from oil and atomic power to safe, non-polluting renewable energy. Existing groups and new organizations will present demonstrations of solar equipment, publicize new technological developments, hold conferences on social and economic implications and coordinate a variety of solar-related activities.

Recently, local "energy fairs" from Amherst, Mass. to Los Angeles have spurred major interest in solar energy. Solar has also received some favorable press coverage, though on a sporadic and "unique case" basis. Sun Day programs, with a broad base of citizen participation, are planned to help

advance solar energy from the category of "distant possibility" to that of an immediate choice available to our country.

SUN DAY IN ILLINOIS

From rural fields to urban rooftops, Illinois presents a spectrum of possibilities for implementing solar power. The League of Women Voters of Illinois is serving as a center for state-wide organization. Coordinator Judy Beck, working from the Chicago League office, is assisted by downstate coordinator Sandra McAvoy, who is also director of the Illinois Environment Council.

A steering committee representing community, environmental, business, government and educational groups meets regularly to share resources and to insure balance in the state-wide program.

As so many communities have planned weekend or week-long events, Sun Day in Illinois will be officially celebrated as Sun Week, May 1–7. The following is a sampling of events already planned in Illinois. See last page for a calendar of Chicago-area events.

Carbondale—A week-long Low Cost Solar Festival, May 1–6 at Southern, Ill. University in cooperation with the city of Carbondale. Exhibits and displays, films, daily seminars focusing on design, technological, social, legal or economic aspects. Keynote speaker, Buckminister Fuller, May 3.

Champaign—University of Illinois students and local environmental groups plan a week of activity including debates and discussions of "soft path" technology for Central Illinois and the nation. Information tables and exhibits and special "Bus, Bike and Hike Week" events are planned.

Evanston—Sunrise '78 kick-off conference and fair at Northwestern University April 21–22. Informal seminar speakers include representatives from Argonne Labs, N.U. Urban Affairs Center, U of I, Circle, and Acorn Magazine. Films, exhibits, solar-inspired art, food and mime theater highlight the community-based event. Also the scene of Rep. Abner Mikva's 10th District Municipal Seminar on Alternate Energy and a conference on Jobs and Solar Energy organized by Midwest Academy with the cooperation of several labor unions. Barry Commoner will speak at both the labor conference and the public event. Evanston's Sun Week continues through May 6 with educational programs, local business cooperation, solar installation open house, and May 3 events.

Jacksonville—Sunrise to sunset celebration. Special educational and entertainment programs planned at the public library. Local solar enthusiasts will sponsor a solar water heating contest.

McHenry County—Environmental groups, farmers' organizations and garden clubs will coordinate Sun Week activities. Exhibits, including working solar projects built by local high-schoolers, and tours to solar installations will highlight educational programs.

Park Forest—displays, seminars and environmental/earth/energy activities will be centered at the award-winning Freedom Hall. Events are cosponsored by the Villages of Park Forest and Park Forest South, local enviromental groups and Governors State University (*Acorn* magazine)

Rockford—An educational program, from primary level demonstrations to guest spots on local TV talk shows, will provide warm-up for Sun Day events on May 3 and 6. Sunrise and sunset ceremonies, solar exhibit fairs for children and for homeowners, and how-to workshops are planned.

EXIMBANK RENEWABLE ENERGY OFFICER

Mr. PERCY. Mr. President, on Wednesday, April 5, I introduced legislation which would amend the Export-Import Bank Act by creating within the Bank an officer whose primary task would be to promote the export of American renewable energy technology equipment. On Thursday, April 13, I testified before the Subcommittee on International Finance of the Senate Banking Committee on behalf of this legislation. On the morning of my testimony, I received a letter from Mr. John Moore, the President of Eximbank advising me as to why the Bank was unwilling to support this legislation. Mr. President, I take this opportunity to respond to Mr. Moore's letter.

Mr. Moore contends that the designation of an officer to promote the export of renewable energy technology would be impractical considering the Bank's size and organization and "inadvisable in light of foreseeable congressional requests for designation of officers in other sectors of particular interest to the Congress."

There is presently an officer of the Bank whose area of responsibility is sectoral. This is the small business officer. Therefore, creating an officer to promote exports of renewable energy technologies would not break new ground. The precedent has already been set by the establishment of this small business officer.

Nor should creating this officer leave the Bank open to additional demands for other special officers. Promoting the use of solar and other renewable energy technologies has become a primary component of our energy and foreign policies. A month ago, President Carter signed into law the Nuclear Non-Proliferation Act which includes title V detailing our intent to promote the development and application of nonnuclear energy technologies in the Third World. Several days ago, the Washington Post revealed that President Carter is creating a special high-level task force to assure that solar technology development and utilization is given greater visability and funding.

These actions highlight the importance the President attaches to a viable domestic solar industry capable of competing in export markets. Thus, this officer would be more than a champion of a special industry. He would be performing tasks consistent with our most important domestic and foreign goals.

For the reasons given above, I believe that this legislation would not be harmful to the Export-Import Bank but could contribute significantly to the growth of a vital American industry.

Mr. President, I ask unanimous consent that Mr. Moore's letter and my testimony before the Subcommittee on International Finance be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CHARLES H. PERCY

Mr. Chairman, I thank you for this opportunity to testify before this subcommittee on the important issue of promoting the export of American renewable energy technology equipment.

On Wednesday, April 5, I introduced legislation which would amend the Export-Import Bank Act by creating within the Bank an officer whose primary task would be to promote the export of American, renewable energy technology. The rationale for this amendment derives from the policies articulated in Section 501 of the Nuclear Non-Proliferation Act and Section 119 of the Foreign Assistant Act.

Specifically, this officer's duties would entail the following: first, advising the President of the Bank on ways in which solar and other renewable energy technology can be exported with the use of the Bank's facilities; second, disseminating information to appropriate manufacturers concerning the various export programs with the Bank; and third, acting as a liaison for these manufacturers between the Bank and the relevant departments and agencies in the government.

To assure that the officer's work is meaningful, the legislation would require that the Eximbank include in its semi-annual report a section detailing the Bank's performance in promoting exports of renewable energy technology equipment. In addition, the Eximbank would be required to include the officer's views in all statements to Congress already required prior to finalizing agreements to finance exports of nuclear technology. Finally, the Board of Directors of the Bank would be obliged to consider the feasibility of renewable energy alternatives and the views of this officer in any decision involving energy-related exports.

Some may argue that the creation of such a position would disturb the present structure of the Bank, and that other industries would soon claim their right to a special champion in the Bank. These arguments are not persuasive.

While the present responsibilities of the Bank's officers are structured primarily along geographical lines, there is already an officer of the Bank whose area of responsibility is sectoral and not geographical. This is the small business officer. Creating an officer to promote the export of renewable energy technologies would not break new ground; rather, it would rest comfortably with the precedent set by the establishment of the small business officer.

Creating this officer should not leave the Bank open to a multitude of requests for additional sectoral officers because of the unique position the solar industry must play in furthering this country's energy and foreign policy goals. Promoting the use of solar and other renewable energy technologies both at home and abroad have become primary components of this nation's energy and foreign policies. Only four weeks ago, President Carter signed into law the Nuclear Non-Proliferation Act which includes Title V detailing our intent to promote the development and application of non-nuclear energy technologies in the Third World. In 1977, the Congress added Section 119 to the Foreign Assistance Act which expressed our desire to help developing nations use small scale energy technologies in rural areas.

These policy goals highlight the importance of the development of a viable domestic industry capable of exporting renewable energy technologies. Thus, this officer of the Bank would be more than a champion of a special group. He would be performing tasks consistent with our most important domestic and foreign goals.

As we all know, the Export-Import Bank is a very important mechanism for financing U.S. exports. Although about 85% of U.S. manufactured exports go forward without Bank assistance, some exports cannot be financed by the private sector alone. The Bank now supports over 20% of all capital goods exports. Further proof of the Bank's importance to U.S. exports is the administration's request for an increase of $15 billion over the next five years in the loan ceiling of the Bank.

Eximbank is a particularly important source of financing for nuclear exports. Since

1959, when the Bank first became involved with exporting nuclear power plants, it has underwritten, to some degree, all but two such U.S. plants around the world. In dollar terms, this support has financed approximately $6 billion in nuclear equipment and facilities.

This Eximbank support for nuclear exports has had a very positive effect on the development of the nuclear industry in this country. By lending funds for nuclear technology at low interest rates to foreign borrowers, the Bank has, in effect, subsidized this technology. It has made it more attractive abroad than it might have been had market interest rates been in effect.

The Bank does not have an equally impressive record for financing solar and other renewable energy technologies. To the contrary, there has been virtually no utilization of the Bank's resources to aid this important and promising industry. Given the proper signals from Congress, I believe that the Bank could play as crucial a role in developing our solar industries as it has our nuclear industries.

The creation of an Eximbank officer to promote the export of renewable energy technologies would be a significant step in the right direction which would directly benefit both this country and the rest of the world. Most obviously, a visible commitment by Eximbank to promote exports of renewable energy technologies would have a positive impact on the energy plight of the Third World. Since the Arab oil embargo and the subsequent quadrupling of oil prices, many of the poorest nations, unable to pay these prices, have had to forego entirely their development aspirations. The slightly more affluent nations have continued to purchase oil but at the risk of bankruptcy as their international indebtedness has mounted precipitously. A commitment by the United States to promote the use of solar technologies could provide long term solutions to these nations' energy needs and increase the likelihood of their meeting their development goals.

Promoting the development and use of solar energy would also help check the ominous spread of nuclear weapons capability. If practical alternative energy technologies were readily available, many countries would refrain from acquiring nuclear scientists and materials altogether or would at least limit themselves to the use of less sensitive nuclear facilities. The institution of a visible and effective export program would assist in providing such an alternative.

This legislation would stimulate the growth of an important domestic industry. Promoting exports would provide manufacturers with the necessary capital to expand production. As the industry grows to meet foreign demand, the unit cost of the technology should fall, thereby making it a more attractive alternative for American consumers. This, in turn, will lead to more jobs and further investment. In addition, a growing export industry, supported by the Bank, would help reduce our high balance of trade deficit.

This legislation should not be interpreted as an anti-nuclear proposal. Nuclear power has become an integral part of our energy mix. I do believe, however, that solar and other renewable energy technology industries should be given the chance to become export industries as well.

To this end, I have recently introduced complementary measures designed to achieve the same goal. In particular, I have sponsored legislation (S. 2731) which directs the Secretary of Commerce, in consultation with the Secretary of Energy, to undertake a global market survey to determine potential markets for American solar technology equipment. The information derived from such a survey would be extremely useful for the Eximbank in disseminating information to appropriate manufacturers around tne country. I have also asked the Congressional Research Service to examine ways of facilitating the export of renewable energy technologies.

I ask that my statement in support of this legislation and my letter to CRS be made part of the hearing record.

These efforts underscore my deep concern that the developing world has access to practical alternative energy options. This amendment to the Eximbank Act would help provide such an alternative and will thereby decrease the risk of nuclear proliferation. That this legislation will have the simultaneous effects of aiding our domestic economy and helping to solve our energy problems increases my enthusiasm for it.

Mr. Chairman, I thank you for this opportunity to participate in this hearing. I appreciate your taking my testimony into consideration and hope you will act favorably on this legislation.

Thank you.

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., April 11, 1978.

Hon. CHARLES H. PERCY,
U.S. Senate, Dirksen Senate Office Building, Washington, D.C.

DEAR SENATOR PERCY: I am responding to your letter of April 6 urging Eximbank's endorsement of S. 2835 which you introduced on April 5, 1978. This bill would amend the Export-Import Bank Act of 1945, as amended, to establish a non-nuclear renewable energy resources officer at the Eximbank to advise on Eximbank's role in offering financing support in this emerging export field.

I would like to take this opportunity to say that we at Eximbank have noted your substantial and important efforts to promote the export of solar and other non-nuclear renewable energy technology products and services abroad. We fully support these efforts both as a means to strengthen the fledgling solar industry in the United States and as a potentially lucrative and important new American export field. While Eximbank welcomes the opportunity to finance solar and other alternative energy equipment and services, we believe that this legislation is both unnecessary and inadvisable to achieve greater Eximbank participation in solar energy exports.

The single officer in Eximbank who has anything other than programmatic or administrative responsibilities is the Small Business Officer. The position was created as the result of Congressional interest in assuring that Eximbank does all that it can to assist small businesses to export their products and services. In fact, our Small Business Officer is also the Senior Vice President for Exporter Credits, Guarantees and Insurance, and as such is supervising those Eximbank programs most often used by small and minority businesses. All of Eximbank's other officers are responsible either for specific Eximbank programs or for geographical areas within specific programs.

Despite Eximbank's substantial involvement in such sectors as power plant exports, particularly nuclear power, and commercial jet aircraft, Eximbank has no officer designated to deal with these sectors. The Bank's size and its organization make such designation impractical, and, in light of foreseeable Congressional requests for designation of officers in other sectors of particular interest to the Congress, inadvisable.

The relatively low cost and resultant short term required for financing of solar and other alternative energy technology exports very likely mean that a substantial amount of the financing can be provided by the private sector. As you are aware, Eximbank is instructed in the Export-Import Bank Act to "supplement and encourage, and not compete with private capital". Consequently, the Bank does almost no direct lending for exports in amounts less than $5 million or for terms less than five years, a range in which commercial banks are capable and comfortable in financing. While commercial solar installations, such as photovoltaic cells for electricity generation, may eventually be marketed costing in excess of $5 million, we would expect exports of this magnitude to be rare for the next several years. We would, however, be prepared to examine the feasibility of financing such exports directly on a case-by-case basis as they arise.

Recognizing that there are foreign markets in which the political or commercial risks make financing even modest amounts for relatively short terms unattractive to commercial banks and in an effort to induce participation in export financing by medium sized and small regional banks, Eximbank offers several programs to insure and guarantee private financing for export sales. It is likely that most Eximbank financing support for solar and other alternative energy technology and services would be through these Eximbank insurance and guarantee programs. As such, they would be in the province of Eximbank's Small Business Officer either because such exports would be made by small businesses or because in his role as Senior Vice President for Exporter Credits, Guarantees and Insurance, he would be responsible for exports requiring the financing support on the terms and in the magnitude described above.

We would like to suggest that when the Global Marketing Survey which you are sponsoring is completed and the results are disseminated to the U.S. solar industry, Eximbank literature be provided as well, with our Small Business Officer listed as a contact for information and assistance for companies wishing to utilize Eximbank for export sales. In the interim, Eximbank is currently embarking on a nationwide series of seminars in cooperation with the Department of Commerce, the Overseas Private Investment Corporation and the Small Business Administration to inform small and minority businesses and banks of export and investment opportunities and support. Working with the Department of Energy, we will attempt to invite representatives from all solar technology companies in the areas in which the seminars are conducted.

Finally, let me comment on the requirement that the Eximbank Board of Directors consider the feasibility of renewable energy alternatives in any decision involving energy-related exports. By the time that Eximbank is approached to finance the export of power plants or equipment, the buyer has already made his decision about the type of equipment or facility he will purchase. Having been informed of this decision, American contractors, as well as their foreign counterparts, bid on the contract. It is generally at this point that Eximbank is approached to finance the project or equipment to fulfill the requirement that bids include financing arrangements. Consequently, even if Eximbank had the technical capability of performing such a feasibility study, which it has not, it would only be completed after the buyer had made his decision to purchase the type of plant or equipment which he feels best meets his needs.

It is important to bear in mind that the United States exports no energy plant or equipment the technical and qualitative equivalent of which cannot be procured from other industrialized countries. International bidding competition for such projects is intense. The additional time and cost of such a study would usually make timely provision of competitive financing arrangements to American exporters by Eximbank impossible, resulting in the loss of the business to foreign companies.

Moreover, even were it feasible for Eximbank to acquire the expertise necessary for

such a study, foreign government resentment of the apparent attempt of the United States to dictate their energy choices through commercial policy would certainly result in the loss of contracts to foreign exporters who are supported by their official export financing agencies, none of whom impose any such requirement.

To conclude, this requirement of the legislation would assure that the single avenue through which the United States can affect the safety and operation of foreign energy facilities, i.e., by having them provided by American contractors who meet the most stringent safety and health standards in the world, would be lost.

Again, Eximbank is aware of the potential for solar and other alternative energy technology exports and will do everything consistent with its Congressional mandate to support the export of such technologies. We appreciate your efforts in this regard, but believe that the creation of a non-nuclear renewable energy officer at Eximbank would not contribute meaningfully to increased exports of these technologies. We would be pleased to discuss this matter further with you and your staff at your convenience.

Sincerely,

JOHN L. MOORE, Jr.

ERA DAY IN CHICAGO

Mr. PERCY. Mr. President, many outstanding leaders are advocating the ratification of the equal rights amendment and many of them were together Friday, April 14, in the Guild Hall of the Ambassador West Hotel in Chicago to discuss ways to win needed support in Illinois for ERA's ratification.

The Illinois Women's Political Caucus sponsored a "Party with a Purpose" with Ms. Jayne Thompson, honorary chairperson and Marjorie Benton and Patricia Hutar, benefit cochairpersons. Also present were featured guests Liz Carpenter and Jill Ruckelshaus, along with special guests Marlo Thomas, Sharon Percy Rockefeller, Ann Landers, Mary King, Arnita Boswell, Al Robinson, and myself.

Patrons of the event were the Democratic National Committee, Arthur Rubloff and the United Auto Workers; sponsors were the Honorable Clifford Kelley, Melynda Lopen-Erlich and Connie Seals; and the following contributed to the outstanding success of the event: Doris Conant, Richard Melman, Hedy Ratner, Carol Silverthorn, Rebecca Sive-Tomashefsky, Ambassador West Hotel, Midwest Women's Center, and the National Women's Political Caucus.

Texts of the remarks of many of the speakers were not available but a text was available from Marlo Thomas and I ask unanimous consent that it be printed in the RECORD. In my judgment it constitutes an excellent statement of the case for ERA, supported 6 years ago by over 90 percent of the Members of both the House and the Senate and yet still not adopted as a part of the Constitution. I reiterate again my own strong support for ERA and my hope that it will be next offered by the Legislature of the State of Illinois.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SPEECH BY MARLO THOMAS

Thank you.

It's terrific to be here, to be with all of you, and to be back in Chicago.

I've been living in California, you know. And recently we had a new experience there. It is called "the monsoon."

Large trees floated through living rooms and parlors. Long stretches of freeway disappeared beneath the waves.

My hill fell into my neighbor's pool.

No, I take that back, it didn't fall, it kind of slid. And as we stood at the edge of the pool, with our lawyers and adjusters, gazing at the 15 feet of mud which had nestled into the deep end underneath the high diving board, I began to have this longing for someplace high and dry—like Chicago.

But I'm not just here because I needed to come in out of the rain. I'm here because there's work to be done here, work for you and me in defense of liberty. I'm here because I believe that the national effort on behalf of the equal rights amendment must have one top priority.

What a hassle we have had with this simple, straight-forward amendment!

You would think the idea of equality under the law was revolutionary or something!

You would think it was not *already* promised in the Constitution!

You would think the ERA was a *new* idea—when it has been introduced at every session of Congress since 1923—when it is already in effect for millions of Americans who don't feel they have to wait one more minute to exercise their rights.

I get absolutely furious when I think that women had to wait more than 50 years for passage of the 19th amendment that gave them the vote. I think it's a disgrace that we should still have to be campaigning for women's rights in 1978!

The opponents of the ERA have a fear ridden interest in a certain kind of make-believe "order"—in the family, in the job market, in the banking and credit system, in politics—and they are trying to scare us off with *their* fears of what's going to happen to *them* if this so-called established order crumbles.

But there *is* no established order!

Different people make different choices about how they want to live their lives. They have the *right* to—and the law is not supposed to protect some make-believe order, it is supposed to protect their *rights*.

I am sure there are lots of people who don't want to cope with the rights of women.

I am also sure there are lots of thieves who don't want to cope with the rights of property owners.

I am sure there are whites who would rather not cope with the rights of blacks; bosses who would rather not cope with the rights of labor. Just a few minutes ago, there were some people on State Street who didn't want to cope with my rights as a driver.

Well, we had better learn to cope with each other's rights.

Because that is the way we preserve our freedom.

That is the way we grow as individuals and as a civilization.

Our credibility as a free nation is on the line here, the credibility of our Constitution is on the line. And our credibility depends on our readiness to guarantee the rights promised by the Declaration of Independence.

And, so far, equal rights for women is a promise not kept.

The ERA has the distinction of being as scary as the truth always is to those who would rather live in the land of make-believe than face up to reality.

I remember very clearly how scared some of the television bigwigs were when we first suggested a series about a female on her own. It may seem amazing now—but That Girl was a revolutionary character for her day.

We were told that a female without a family unit would never work as the heroine of a television series, that if I wanted to play a girl moving to New York to pursue her career, I would have to take along an aunt or a six-year old brother.

I remember marching into their offices with Betty Friden's book "The Feminine Mystique" and saying, "Read this! The times, they are a'changing! Millions of Americans are already pursuing their lives as single, independent people! That Girl isn't a revolutionary! She's a fait accompli!"

The television bigwigs were assuming there was some strict definition of what was feminine that was the only definition acceptable to the public.

They didn't recognize that those strict definitions had long since been discarded, that women had already begun to seize control of their own lives.

This business of the feminine definition was put into wonderful perspective back in 1912 by Charlotte Perkins Gilman, when she wrote an essay called "Are Women Human Beings?" Gilman wrote:

"When the doe in the forest wishes to run far and fast, she is not unfeminine. She is not making a *buck* of herself. She likes to run, not because she is a *doe*, but because she is a *deer*. Just as much of a deer as the buck is."

If we women want to grow, to run, to compete, it's not because we are un-feminine, not because we want to make men of ourselves. It is because we are human beings, just the same as men are, with rights that include the pursuit of happiness.

There's a woman in New York named Rena Bartos—a vice president of J. Walter Thompson, the big advertising concern. And she has coined a new axiom for the ad business. She says—"If you want to hit a moving target, aim at where it's going—not where it has been." The law makers too, must cease aiming at where the public has been—and make sure they direct their efforts to where the public is going.

Where is the public going as far as equal rights for women are concerned?

Opponents of the ERA want us to believe that only wild-eyed, insane fanatics are for the ERA—people like me and Margaret Mead and Sylvia Porter—and the good solid majority is against it.

Well, the House of Representatives voted *for* the ERA, 254 to 23.

The Senate voted *for* it, 87 to 8.

President Carter is for it.

President Ford was for it. President Kennedy was for it. So were President Johnson, President Eisenhower, President Nixon. Governor Wallace came out *for* it when he was running for President. So whether you sit on the right *or* the left, the vast majority of your leaders have been for the ERA.

What about the public of the *future*, the young people who will be deciding the elections of the future and raising the families of the future?

Out in Northfield, Illinois, an outfit called *Who's Who Among American High School Students?* surveyed more than 23,000 outstanding teenagers. These kids are the leaders, the opinion makers, the kids who set the standards and behavior patterns for others to follow.

78% said they would vote for a qualified woman if she ran for president.

96% said they favored equal pay for equal work between men and women.

In a couple of years, when they're out in the job market and they see that only the *law* can guarantee women equal pay for equal work, they'll all be for the ERA.

But aren't you afraid, we are asked.

Aren't you afraid the ERA will mean the end of the laws that protect women?

You'll have military obligations!

You'll have to support your family!

Support your family?

One out of every three American women with *pre-school children* is already working to support her family!

44% of the women of working age are already employed—they make up 48% of the total labor force!

So who are these so-called protective laws protecting?

They're protecting a make-believe lady in a make-believe land. What they're really protecting is men, who don't want to cope with the rights of women, and women who have been conditioned to live in fear of their possibilities as people.

As for military obligations, 99% of the men eligible for military service never see combat action. There is no reason to believe that more women would. All kinds of other military obligations can be—and are being—carried out by women with consummate skill.

Now that the military draft has been ended, passage of the ERA would mean that women would be free to volunteer on exactly the same basis as men.

Well, how do the kids in the Northfield Survey react to that?

You are a bright, well-educated person, the Survey said to them.

Would you volunteer to serve in the armed forces?

65% of the boys said no.

Only 53% of the girls said no!

There must be something about military service that young women actually think is worthwhile. And I don't believe it's too hard to figure out what this is.

Frankie Freeman, a black woman attorney and a member of the US Civil Rights Commission, has pointed out that "the army has provided a route out of poverty for many men—through its opportunities for occupational training, schooling and mortgages financed under the GI Bill."

Senator Birch Bayh of Indiana said of his own experience: "When trying to decide whether I should volunteer or not, one of the things I considered was not only what I could do in the army, but that if I went into the army, it would permit me, on my own self-reliance, to provide an educational opportunity for myself. Most young women in this country do not have that choice today," he said. "The ERA would give them that choice."

Think what the educational provisions of the GI Bill could do for the educationally disadvantaged woman!

The armed forces welcome men without a high school diploma today, giving them the chance for an education they might never get in civilian life.

But a woman doesn't have that chance.

Unless she's already got her high school diploma, she can't even get into the army. Her constitutionally promised right to equal opportunity has been tampered with so that if she wants to use the army to get ahead, as Birch Bayh did, she has to be already ahead of the man, just to get the opportunity.

The ERA would eliminate that bias.

Think what GI loans for homes, farms, businesses would do for women who must support their dependents.

Think of all the points a man scores when he's looking for a job and he can say, I've been in the army. Can we afford as a nation not to let women score points on the same basis? Can we afford to waste human resources this way!?

Why do you think there are only 18 women pilots flying for the commercial airlines? Because women don't get the training, they can't log the required hours; they haven't come into the field through military experience, the way all the men pilots have.

And besides all that, it is clear that—ERA or no ERA—women will have military obligations just as soon as the country needs them for defense. In the same way that they have support obligations just as soon as the family needs them for its livelihood. No less an opponent of the ERA than former Congressman Emanuel Cellar of New York said as much, in wartime, in 1944.

The so-called protective laws that the ERA would topple are based on the make-believe idea that women will always be nice and comfy in their idyllic homes, endowed with peace and riches by their husbands.

Well, if there's going to be peace and riches, let it be for the husbands too.

The TDA won't deprive any divorced woman of the custody of her children—but it will also give men the right to alimony, when they are divorced and in need.

The ERA won't deprive any widowed woman of her husband's Social Security—but it will also give widowed men the right to Social Security that their wives accumulated over the years, which is not the case now.

The ERA won't deprive any divorced woman of the custody of her children—but it will also give men the right to child custody, when that is clearly the best thing for the child.

The ERA takes no right away from women that is now guaranteed them. What it does is to include men in some of the rights formerly reserved—and wrongly so—just for women.

Perhaps the best thing that the ERA could do for a man is to give him the sense of security that right now, no insurance policy in the world can give him—the security that, if something happens to him, he has a partner who can maintain his children in the style to which he accustomed them when he was alive.

Insurance payments are worthless and less financially as time goes on: That's a function of inflation. But a working woman, with rights to equal pay and promotion with men, is worth more financially as time goes on. And that's the function of the ERA.

Until there is peace and riches, let the law serve women not as creatures embodying some make-believe definition of feminity—but as human beings, with inalienable rights. Let the law give women all the tools men have—to cope, to struggle, to build, to be all they can be in a world that is neither peaceful nor rich—but the only world we have. The world we must live in together, and improve together, if there is ever to be any improvement at all.

Opponents of the ERA say it would only obligate Government to apply the rules of equality—and would not affect basic discriminations against women that are rooted in custom and prejudice.

That's a cop-out.

Do we tolerate racial segregation in the public schools just because some of the private schools may still get away with it? No one knows better than we who have matured in the era of the civil rights struggle how uncannily, slowly but surely, the heart follows the law in this country. There is no better way to end up with a public that accepts the equality of women than to start out with public institutions that assume and insist on the equality of women.

The ERA will help men be men, and will alleviate the pressure on them to be superpeople.

The ERA will help women, and will alleviate the pressure on them to be sub-people.

The ERA will bring our laws into consonance with the realities of our life, and will renew the vision of our Founding Fathers. And what that vision requires is a positive idea of women as human beings. Endowed, not by men with privileges and limitations, but by their creator, with rights. Rights that cannot be denied or abridged because we are women, any more than they could be denied or abridged because we were once colonials under British Law.

Only three States remain to ratify before the ERA becomes the law of the land. Illinois is one of them—the only industrial, midwestern State left to ratify.

And only a few votes remain to be won in the State Legislature before the ERA becomes the law of Illinois.

Ask for those votes, my friends.

I am told that those votes essentially can be influenced by the Cook County political establishment.

Well, tell the establishment that you care, that you support equality for all people. Your support will put you on the side of the traditions of liberty that are enshrined in the American past. It will put you squarely on the side of the liberated future we all deserve.

Thank you.

AUDIOVISUAL PROGRAM MANAGEMENT IN THE FEDERAL GOVERNMENT

Mr. PERCY. Mr. President, on Thursday, April 27, 1978, a report on Federal audiovisual activities was issued by the National Telecommunications and Information Administration. This report, compiled under the direction of Mr. Robert Lissit, reveals many startling facts about the magnitude of Government audiovisual programs. The report also reveals the unfortunate frequency of inefficiency, duplication, and poor management practices in the administration of the Federal Government's audiovisual resources.

This is a more serious issue than many of us have realized. The Federal Government spends an estimated $500 million a year on audiovisual programs. By contrast, the Twentieth Century Fox Corp. spent $90 million on the production of movies and television shows in 1976. By any standards, Government filmmaking is big business.

One encouraging point is that NTIA, in cooperation with the Office of Management and Budget, has developed a new audiovisual management circular designed to improve agency and department management of audiovisual programs. The substantive recommendations of this circular will hopefully prove to be effective remedies to the problems outlined in Mr. Lissit's report. I know that my colleagues and I look forward to monitoring the efforts made by all Government agencies to improve the management of Federal audiovisual activities.

Mr. President, I ask unanimous consent to print in the RECORD the introduction and general conclusions from the NTIA report of April 26, 1978.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SUMMARY OF FINDINGS AND RECOMMENDATIONS ON FEDERAL AUDIOVISUAL ACTIVITIES

INTRODUCTION

At the direction of President Carter, a year-long study of government audiovisual programs has been conducted out of the Office of Telecommunications Policy, in the Executive Office of the President. A review has been made of the programs in 16 departments and independent agencies, and the departments of the Army, Navy and Air Force. An attempt has been made to identi-

fy the scope of the government effort, determine whether there is any inefficiency and, if so, to devise ways of improving the situation.

The review consisted of:

(1) Development of policy recommendations for each of the departments and agencies studied. Cooperative consultations were held throughout the period of the study.

(2) Development of an audiovisual management circular, in cooperation with OMB.

The review included personal interviews with more than 450 government representatives and spokespersons for private industry and labor unions, visits to government production facilities, review of approvals and budgets for individual audiovisual products, and screening of more than 200 government-produced full length motion pictures, in addition to videotapes, short items such as public service announcements, newsclips and documentation reels.

The review covered audiovisual material produced for internal agency use—training and management communications—and material for public communication. The greatest attention was paid to motion picture films and to videotape. Projects and facilities were examined on the basis of written justifications, clearance procedures, procurement systems, utilization, costs, distribution, and evaluation procedures. Individual audiovisual products were reviewed for technical proficiency and communications effectiveness, and weighed against cost and level of distribution. While evaluation of a motion picture or videotape is often subjective, an attempt was made to help agencies relate cost to qualify.

During the course of the review, a number of planned projects were identified where sufficient reason existed to recommend re-evaluation to agencies.

The current status of these recommendations is:

Disapproved expenditures	$4,006,000
Disapprovals recommended, but not yet acted upon	4,975,647
Savings anticipated from recommended facility consolidations	3,049,628
Projected savings	12,031,275

In addition, audits were recommended of projects which cost the government $1,737,342, in which there was reason to suspect substantial overcharges or procedures which seemed to run counter to government regulations. One such audit was completed during the course of the review. A film which cost about $125,000 was audited.

The auditors disallowed approximately $25,000 in charges, and asked for further documentation of an additional $7,000.

The new audiovisual management circular, developed in cooperation with the Office of Management and Budget to improve management of audiovisual programs, includes the following provisions:

Audiovisual products should be used as support tools for specific Government programs, not to promote an agency, or provide forums for agency opinions on broad subjects, without reference to specific programs.

Agency heads shall designate an office with responsibility for management oversight of audiovisual activities.

Existing audiovisual facilities shall be consolidated into as few locations as practicable, and underutilized facilities shall be closed down.

Government employees will not serve as performers in audiovisual productions unless they are doing their own jobs, for training or internal communications, and are not allowed to use prepared scripts.

In establishing the most cost-efficient way of producing audiovisual material, agencies will consider contracting with private industry where appropriate.

Before acquiring or producing an audiovisual product, an agency shall consider communications objectives, production costs, target audience, user cost, life span, frequency of use, method and cost of distribution, and whether another audiovisual product has already been done on the subject.

The National Audiovisual Center will establish and maintain an index of government audiovisual products which will be checked by agencies before production.

Reports on individual productions, and annual reports, including all costs, will be prepared by agencies and placed on file with the National Audiovisual Center.

Out-takes from footage accumulated in production of government audiovisual products will be made available to other agencies and the public through the Audiovisual Archives Division.

Independent evaluation of a set percentage of audiovisual products shall be made to determine the effectiveness of the products in communicating their intended messages. Evaluations will be on file at the National Audiovisual Center.

Records will be kept of distribution systems, and how much it costs to reach a given number of people. Distribution reports will be kept on file at the National Audiovisual Center, and will be considered by agencies in developing future audiovisual production.

Recommendations already made to agencies and departments as a part of this review reflect the policies and procedures outlined in the OMB Circular. Several agencies already are at work drafting new procedures to tighten controls. The General Services Administration will provide continuing guidance and monitor implementation of the new procedures.

The issuance of the OMB Circular, the GSA follow-up activity, and recommendations made to departments and agencies, represent an attempt to manage the government's audiovisual programs efficiently, to allow for proper Congressional and public oversight of audiovisual expenditures and, ultimately, to provide the taxpayer with some assurance that he or she is getting value for his or her dollar.

Audiovisual material, by its very nature, has high visibility, is expensive, and has a great potential impact on the viewer. Properly used, it is an important government tool. Improperly used, it can be wasteful, or, worse, result in propaganda. While adherence to the new guidelines should result in a reduction in waste and inefficiency in government audiovisual activities, the nature of the programs is such that periodic reviews may be necessary to assure continuing management attention.

Steps taken by study agencies

Action: Reviewing internal audiovisual procedures and planning to tighten controls.

Agriculture: Completed internal review of audiovisual programs; trying to strengthen Departmental management, to achieve greater cost-effectiveness and wider audience appeal.

Agency for International Development: (Program reviewed separately from Dept. of State.) Has drafted new procedural guidelines to tighten control over audiovisual programs.

Commerce: Has completed new guidelines and established review board to consider all proposals and require greater justification for audiovisual material.

Defense: Considering proposals to improve central management and consolidate production facilities. Refining information system to reduce duplication of effort.

Energy: Procedures being considered for tightening management controls. Department is considering initiation of audiovisual review board.

G.S.A.: Controls tightened over acquisition of video equipment.

H.E.W.: Completing revision of audiovisual management manuals to assure Departmental consistency, bring in line with mission statement, and tighten controls.

H.U.D.: Considering new procedures to bring all Departmental audiovisual programs under central guidance.

Interior: Considering bringing newsclips under Departmental audiovisual procedures; considering tightening controls over video equipment purchases; currently considering the need to alter Departmental guidelines relating to motion pictures.

Justice: Studying the need for consolidation of Washington-area video production facilities.

Labor: Completed inventory of equipment and audiovisual programs, considering proposals to tighten controls, and developing consolidation plan.

NASA: Completing work on new agency procedures providing more centralized management of audiovisual programs.

State: Has completed draft of new procedures to tighten control over audiovisual activities.

Transportation: Re-drafting manual covering audiovisual procedures.

Treasury: Has established central audiovisual oversight office; developing facility consolidation plan.

GENERAL CONCLUSIONS

Measured against any standard, government production of audiovisual material is big business.

Agencies spend an estimated $500-million a year on all aspects of audiovisual activity. For comparison purposes, that is:

More than the current proposed appropriation for foreign military assistance.

Just about as much as a proposed Federal grant program for local governments to insulate schools, hospitals and homes of the poor.

More than double the amount proposed to help rehabilitate homes in older neighborhoods.

Nearly half the entire budget for the Department of State.

The estimate of yearly expenditures of $500-million is conservative. It is substantially lower than a preliminary estimate of $632,300,000 for calendar 1977 by "The Hope Reports", a private industry publication.

Reporting procedures have been such that government has not been able to identify total annual audiovisual expenditures with any precision. There has been no accurate record of how many films or videotapes are in circulation. There has been no inventory of existing in-house government television studios. There has been no consistent government-wide system of approving or reporting audiovisual production. There is no single procurement system, no consistent way of evaluating private industry proposals, no single catalogue, and no requirement for evaluation of material produced. While some government produced audiovisual material has been useful, and some good quality products have been obtained at reasonable costs, there are other examples which raise serious management questions:

A government agency produced a 30-minute BiCentennial film, under contract to a major Hollywood motion picture company, at a cost of $454,463. The agency estimated 500,000 people have seen the film. By comparison, although there are obvious differences in purpose and budgeting, the average cost of one episode of a regularly scheduled half-hour prime-time commercial network television program in the 1977–78 season was $177,000; $363,000 for a one-hour program. The average network television program was seen by an estimated 30-million people.

Question: Was the anticipated audience for the Government film large enough to justify the cost?

In 1975, a contract was signed by a military command for production of a training film, at a cost of $37,000. By August, 1977, the film had been revised six times, following approval of nine different script versions, and a finished product had yet to reach the field. The cost had escalated to $150,000.

Question: Could proper planning have avoided the need for revision, and increase in price, and resulted in a more timely completion of the film?

An increasing number of agencies are establishing video production facilities. Often, three or four bureaus or agencies within a single department have separate studios, sometimes in the same building. Many of the facilities are in use less than one-third of the time. There is little sharing of facilities among agencies. Often, money to purchase equipment comes out of unrelated program budgets, or from quickly-spent funds at the end of the Fiscal Year.

Question: Are controls on establishment of government video facilities adequate to prevent a proliferation of underutilized facilities?

In the past three Fiscal Years, a military department's chaplain service has spent $1,963,718.45 on motion pictures. Eighteen films were produced, under contract, at a cost of $990,802; existing motion pictures were purchased for $972,916.45. Many of the films are geared toward personal counseling. The combined output of the other two military departments for chaplains films is a fraction of that amount, and represents almost exclusively off-the-shelf purchases.

Question: If the chaplain's services in two military departments find little need for producing original films, might the other department not find it possible to meet its needs with existing films?

An agency proposed a series of television Public Service Announcements, to be done in the Vietnamese and Laotian languages. The agency goal was to reach 250 people in a moderate-sized city. The proposal reached the departmental level before anyone considered whether a television station would run such foreign language announcements, or whether the desired audience would be watching television.

Question: Did the responsible agency official have an adequate understanding of the uses of television?

A military department currently experiences a 26-month wait between requests for routine training films and the time the films go into distribution. Often, the waiting-time reaches three years.

Question: Why does it take so long to turn out necessary items, and, is the lack of timely response adversely affecting training?

A program office spent $394,000 for a series of four training films and two filmstrips. In the first year of distribution, an estimated 12,000 people saw parts of the training material. The cost to the agency was, therefore, $32.83 per viewer.

Question: Considering the size of the audience, could the same information have been delivered in a less expensive format?

An agency spent $125,000 on a motion picture, but has lost track of the film. There is no record of where the film went, cr whether anyone saw it. Another agency produced a film for $120,000, but made only 16 prints. At the end of the first year of distribution, the film had been shown 139 times. No records were kept of audience size, but each showing cost $836.30, based on production cost.

Question: Did the two agencies involved need motion pictures?

Films by two military departments, on the subject of espionage, released in November, 1976 and February, 1977, use dramatic approaches so similar they could have been created by the same writer. One film cost $70,000 to produce, the other more than $100,000. A third military department currently has approval to produce a film or videotape on the same subject. The script utilizes the same dramatic situations as the first two. A Defense Agency has a videotape in production which covers the same ground. All four items update no fewer than twenty-two audiovisual products on the subject in the Defense Audiovisual Information System, a newly developed, computerized catalogue.

Question: Is this duplication necessary?

An agency proposed spending $4.5-million on audiovisual equipment for a one-shot training effort. The proposal included plans for a $100,000 television studio and purchase of 22,000 tape recorders and projectors, at a cost of $2.3-million. Following the conclusion of the training program, the agency intended to put some equipment in storage, and surplus the rest.

Question: Does such a limited use justify an investment of this amount in equipment?

Could the agency have gone to private industry for services, rather than buying equipment, using it briefly, and then getting rid of it?

The above examples suggest there is a pattern of waste and questionable procedures in government's management of audiovisual programs. Not enough thought seems to be given to whether audiovisual material is the best means of communicating a particular body of information. Results frequently are measured in terms of awards, with little evidence that the product has reached the desired audience. Often, agencies propose to develop a motion picture, or filmstrip, for a general audience. Available distribution reports suggest that, more often than not, the audience which sees the film consists primarily of school children, generally in suburban areas.

While agencies cite a requirement for informing the public as to their programs and activities as the justification for most audiovisual production, it is not clear whether distribution to suburban school children represents satisfactory dissemination of information.

While there is little doubt that audiovisual material can play an important role in government's necessary communication with the public, evidence uncovered in the course of this review suggests that improved management procedures are necessary to assure that tax dollars are being wisely spent, and the resulting products are carefully planned, properly executed, and distributed to an audience which benefits from the information.

Some government audiovisual people have suggested that their productions should motivate, pointing to the great documentary motion pictures done by government in the 1930's by people such as Pare Lorentz. Some government films in recent years have been designed to motivate the public, particularly those films in the environmental area.

It is suggested, however, that there are major differences between the 1930's and the late 1970's. It would be difficult to find a subject for a government-produced documentary which has not been treated by network television programs such as CBS's "60 Minutes". Similarly, subjects of current national interest often are dealt with by the motion picture industry in the form of full length feature films. Local television newscasts often present extended film and videotape examinations of current issues. Whether such material is well executed, or whether it presents a government point of view, is not the issue. If major government motivational material springs from issues currently being addressed by the communications media, it would seem difficult to justify expenditures of public funds to duplicate existing production.

While there are those who decry the decline of government motivational films, there are others who feel a better current use of audiovisual media by government is in communicating information on specific programs and services provided by government.

There are many examples of successfully designed and well-utilized government audiovisual programs. The Office of Education has produced a motion picture dealing with educational opportunities for women which has been widely distributed and, apparently, well received. An Army program designed to teach specialized occupational skills with individualized, self-paced audiovisual instructional modules has been tested and found to significantly raise student test scores. A number of excellent motion pictures are seen in National Parks. What is needed is a major effort to make certain that all government audiovisual production is subjected to rigorous justification procedures, to assure that the recommended format is appropriate for the material, to make certain that a specific audience is targeted to carefully monitor costs, to assure adequate distribution, and to assure the taxpayer that all government audiovisual communication is as effective as the examples cited.

RETIREMENT OF LEE WILLIAMS

Mr. KENNEDY. Mr. President, the retirement of Lee Williams is a sad occasion for all of us in the Senate who have come to know him, to rely on him, and to cherish his friendship and wise advice.

For the past 3 years, we have worked daily with Lee on the Senate floor, in his capacity as counsel for the Senate Democratic Policy Committee. All of us have greatly benefited from his parliamentary skills in helping to expedite the Senate's business for the leadership. And we have especially enjoyed his unfailing smile, his warmth, and his constant willingness to assist us in our own efforts. In ways like these, Lee has done an outstanding job not only for the leadership, but for the entire Senate, and we shall miss him in the future.

Going back over the years, of course, Lee was also well known to most of us as Senator Fulbright's able administrative assistant, a position in which he served with great distinction for more than a decade. During that period, Senator Fulbright and Lee were at the center of the debate over the Vietnam war. In my own capacity as chairman of the Refugee Subcommittee, I was privileged to work closely with the Foreign Relations Committee, with Chairman Fulbright and with Lee Williams. In those difficult years, they performed an outstanding service for the Nation. Through their brilliant efforts, they helped to expose the issues of the war and to educate the American people about the tragedy of the war. In no small measure, it was through the efforts of persistent, dedicated, and able persons like Lee Williams that, finally, we were able to end the war.

Remembering this critical chapter of our Nation's recent history and recalling the years of Lee Williams' remarkable service to the Senate, I would like to take this opportunity to commend Lee for the excellence of his service and to wish him well in his retirement. It has been a priv-

ilege to work with him in the Senate and in this Chamber, and I am grateful for his warm and continuing friendship.

At the end of the great 19th century folk song and tale called "The Arkansas Traveller," the native tells the traveling fiddler:

You'll then think you're mity lucky ef you kin find the way back to my house, whar you kin cum and play on that'ar tune long as you please.

To us, Lee has been the Arkansas traveler among us for these 23 years. Although he is departing now, we hope he will find his way back to this House often in the future, and stay as long as he pleases.

U.S. DEFENSE DETERRENT AND SALT II

Mr. THURMOND. Mr. President, one of the most outstanding articles I have read on the declining U.S. defense deterrent and the dangers of SALT II has been written by former Chief of Naval Operations, Adm. Elmo R. Zumwalt, Jr.

This article traces the trends and policies of the early 1960's which have led us to the dangerous positions we find ourselves in vis-a-vis the Soviets today.

Admiral Zumwalt not only presents the problem and the dangers, he proposes steps which could be taken by the President and the Congress to reverse this loss of U.S. power.

While the Congress prides itself in holding the responsibility to provide for the national defense, the Congress as well as the President have failed to adequately meet this challenge.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRATEGIC DISASTER LOOMS

I. INTRODUCTION

Now that the debate over the Panama Canal Treaties is behind us, it is important that the debate over the prospective SALT II treaty begins.

I enter this debate as one who was proud to support the President on the Panama Canal Treaties. I come into it as one who has tried to work within the Democratic Party, both as a one-time candidate for the US Senate and by working on the defense platform at the last Democratic Presidential Convention. I enter the debate as one who believes that President Carter's recent defense budget decisions are harmful to the United States' future security, and who further believes that the future of the US is in great jeopardy as a result of the strategic nuclear imbalance which will result from those decisions. I shall speak about the latter imbalance and SALT II today.

I am here representing no group.

II. OVERVIEW

President Carter's decisions on strategic nuclear budget items and in the strategic arms control field suggest confusion about what the facts are with regard both to our capabilities and to sound negotiating procedure. The Soviets have the capability to overwhelm us in a strategic nuclear exchange today. Carter's decisions should have been designed to regain our capability to deter the Soviets.

Instead, his budget decisions on strategic nuclear forces have added to the already great advantage the Soviets would have had over the U.S. in 1985, if not earlier, whether or not SALT II is signed. He has made these decisions without obtaining any quid in the SALT II negotiations, and thus has given away significant potential leverage. And, the positions that he has taken in the SALT II negotiating arena have moved the U.S. progressively to weaker ground. Let us examine these matters in some detail.

III. STRATEGIC POLICY AND PRESIDENTS, PAST

Those of us who participated in the Cuban Missile Crisis experienced first hand the impressive contribution that the U.S. strategic nuclear superiority over the Soviet Union gave President Kennedy in winning Soviet acquiescence to his objectives. We also experience first hand the horror of calculating that while hundreds of millions of Russians would have died in a nuclear exchange flowing from that crisis, nevertheless tens of millions of Americans would also have died. Some of us could, therefore, understand the fundamental values that lay behind the Kennedy/McNamara decision soon after the Cuban Missile Crisis: to offer to give up the U.S. strategic nuclear advantage; to permit the Soviet Union to catch up with the U.S. in strategic nuclear capability; and to gamble that by granting the Soviets the opportunity to join us at parity in mutual assured destruction, we would create a state of true mutual deterrence.

This policy was to have been coupled with urgent efforts to achieve arms control agreements to provide parity at lower levels of force and expenditure. President Kennedy and Mr. McNamara made it clear that the U.S. therefore, would not go beyond its then programmed missile force of 1,054 ICBMs and 656 SLBMs, would greatly reduce the radioactivity in its warheads, would forego larger missiles and would not develop an effective civil defense—a calculus designed to assure the Soviets that we were structuring our forces so that a U.S. first strike could not destroy their retaliatory capability, and to give them further assurance that their retaliatory strike would surely kill not tens, but hundreds of millions of Americans, if we did strike first.

Seven years later, by the time Mr. Nixon came into office, it was beginning to be clear that Soviet strategy during the interim had been to capitalize on the U.S. parity offer, to build up huge symmetrical advantages that would carry them to ultimate superiority. They had not eliminated the lethal radioactivity of their warheads as we had done. They had made their missiles huge, in comparison to ours, with warheads 100 times more powerful. They had begun to develop a civil defense capability to help their people survive a U.S. nuclear strike. They were in the process of overtaking us in numbers of missiles and they were vigorously pursuing greater accuracies—equal or superior to ours—to add to their huge advantage in warhead megatonnage.

The signing of the SALT I agreement was a watershed point. In a corporate sense, the US government at that time viewed the SALT I agreements as the last best hope to agree on mutual balanced deterrence. Our side saw the ABM treaty as a means of keeping both populations hostage to the weapons of the other by foregoing defense. We saw the interim executive agreement as a five year tradeoff of Soviet quantitative advantage in missile numbers, megatonnage and throw weight against the US advantages of numbers of strategic bombers, and qualitative advantages in multiple independently targetable vehicles (MIRVs) and weapon accuracy. The government generally recognized two principles. First, the five year period had to be followed by an agreement which would move us to strategic parity. Second, the leverage on the Soviets, during the five year tenure of SALT I to let us have parity in SALT II, could only be maintained by adequately funded strategic force levels, by suitable modernization programs, including appropriate research and development, and by gaining full intelligence on Soviet strategic nuclear programs and civil defense.

The Soviets, on the other hand, saw SALT I as a device for further accelerating their march toward strategic nuclear superiority. The ABM treaty permitted them, through skillful cheating and by research and development much more vigorous than the US Congress would permit us in view of the ABM treaty, to overtake our advantage in the ABM field and to get ready for sudden massive surprise deployment, an ABM system to match their vast anti-bomber defense. While US ABM system deployments are halted, the Soviets have added handsomely to their ABM early warning radar system around the Soviet periphery.

The US added further to the defense disparity by concluding during this period that since we were, as a policy matter, to leave our homeland naked to Soviet missiles, there was no advantage in defending against Soviet bombers. The Soviets saw the interim executive agreement as a way to restrict the US programs, while their own exploitation of ambiguities in the agreements would permit them to counter our temporary qualitative advantage in accuracy and in MIRVs, and while they were further improving their current advantages in megatonnage and in throw weight. The Soviets further saw SALT I as a vehicle with which to intrude into our democratic political process. They understood that in our free and open society the interplay of interest groups is important in policy formulation. They knew that their statements, skillful backgrounders and briefings could manipulate the hopes and aspirations of many Americans in ways that would help to constrain US strategic weapon decisions, just as we have seen them do quite recently in campaigning in this country against the tactical neutron bomb.

The Soviets further advanced their strategy through their great good fortune at Vladivostok in being the only side with an interpreter present. In the absence of a US interpreter to keep them honest, they were able to contend after the meeting that President Ford and Kissinger had misunderstood them and that the limitation of 2,400 strategic delivery vehicles was not intended by them to include their new strategic Backfire bomber. For the same reason they were able to leave ambiguous the agreement on cruise missiles. The Soviets capitalized on these two ambiguities and carried them into strategic relationship with the new Carter Administration.

The Soviets' strategy with regard to SALT I flowered and the US theory of SALT I failed in the five years of the interim agreement which expired last October. The US Congress refused to maintain the single ABM site which we were authorized under the treaty, while the Soviets have maintained theirs. The Soviets accomplished important research and development in the ABM field by cheating on the treaty. They further grossly outspent us, legally, in the field of ABM research and development, and must now be judged to be forging ahead in the ABM field. Partly because of the advantages they were granted in SALT I and partly by exploiting major ambiguities of language in the executive agreement and its associated bilateral understandings, the Soviets have been able to move in SALT I to a position of significant strategic advantage. This is a situation which President Carter inherited on entering office.

Throughout this process, although many decisions were made with which I did not agree, I think it is fair to say that one

President after another was clear in his own mind about what it was he was seeking to accomplish.

Privately, Presidents Kennedy and Johnson were clear that they were improving our forces qualitatively while holding constant the number of US strategic forces in accordance with their intention to permit the Soviet Union to achieve strategic nuclear parity. Both Presidents were carrying out the theory that this policy would likeliest provide mutual deterrence and stability. At the same time they were seeking sensible arms control agreements and were unwilling to sign risky ones. The test ban treaty of that era is a classic example of sensible Presidential policy on arms control. Soviets demands for unverifiable or ambiguous agreements were rejected. The final treaty was precise, fair, and verifiable. It has therefore enhanced US interests.

Presidents Nixon and Ford, by the time they took office, knew very well that the Kennedy/Johnson strategic parity proposal to the Soviets had not worked out. During their years, privately, they were quite clear that the Soviet Union, rather than stopping at parity, was proceeding to achieve strategic nuclear superiority. For example, in the Sixth Fleet, after the Jordan crisis in September of 1970, still early in his first term, the President told me, with regard to his negotiations in SALT I with the Soviets, that he thought that he could get strategic superiority but might have to settle for parity if there was inadequate support for defense budgets. Yet, by the time SALT I was signed, 18 months later, Mr. Nixon was quite clear in private discussions that the US had had to accept somewhat less than parity. And, 20 months later, by January 24, 1974, while I was attending a National Security Council meeting which President Nixon had called, it was clear that he believed we were going to have to accept strategic nuclear inferiority.

My notes of the meeting show that Kissinger expressed the view, and President Nixon agreed, that there was no way the US could get parity in the strategic nuclear field with the Soviet Union. Kissinger said the people won't support it. President Nixon made it clear that he didn't want any talk that sounded like that publicly, however.

In my annual discussions with Mr. Ford when he was House Minority Leader and Vice President, it was evident that he recognized the Soviet march to strategic superiority.

It is a separate question as to whether each of these Presidents was completely candid with the public on strategic nuclear issues. But, one has to recognize that at the very least, they had done their homework and what the facts were.

IV. THE CARTER ERA

In contrast to these previous presidents, Mr. Carter, based on everything one can learn from private conversations, seems not to have done his homework and seems sincerely confused about the facts. He seems truly not to be aware of the burgeoning Soviet nuclear superiority. I can attest to this first hand. I believe that this personal confusion on strategic arms issues is unique among the six Presidents I have observed.

V. THE AUDIT TRAIL

Many of us who had been analyzing over the years the US descent into inferiority in the strategic nuclear balance had high hopes that the Carter administration would, with its new team of policy makers and specialists, emerge from its initial review of the state of affairs with approaches more helpful to the US safety. We knew there was a wealth of material available to the new President:

1. He had in his files the statement of the members of the Blue Ribbon Defense Panel, issued in January, 1971, warning of a significant shift of the strategic balance away from the US and toward the USSR. These prominent citizens had had access to all the facts. They cited as special concerns the Soviet superiority in ICBMs, the far greater rate of Soviet military spending relative to their economy, and the eternal risk of a dramatic technological surprise in weaponry that an open society runs when its most dangerous potential rival is a closed society.

2. He had available the minutes and tapes of the various meetings (NSC, WSAG, SRG, DPRC, SecDef-JCS meetings with the President, etc.) on SALT I, SALT II, strategic issues, and budgets during the Nixon/Ford years.

3. He had the record of our dramatic descent into strategic nuclear inferiority demonstrated by the JCS's calculations of theoretical US/USSR strategic nuclear exchanges. These exchanges are calculated periodically for a range of reasonable assumptions. The immense Soviet advantage in surviving missiles, surviving megatonnage, enemy population killed, and in post-attack recovery time are available for study by the President.

4. Former Secretary of Defense Schlesinger, a member of the President's cabinet, is a nationally recognized strategic expert, clearly available to the President for consultation on these matters. The President could consult him.

5. Former Secretary of Defense Melvin Laird, former Deputy Secretary of Defense Paul Nitze, both of whom are still quite current on classified strategic nuclear information, and a number of retired military leaders who have spoken and written about the shifting strategic nuclear balance and what to do about it could be consulted.

6. President Carter has access to a recent report, "Measures and Trends—US and USSR Strategic Force Effectiveness," done for the Defense Nuclear Agency which shows for 41 different orderings of strategic effectiveness measures—such as ICBM launcher numbers, ICBM throw weight, SLBM numbers, etc., that the Soviet Union is superior in 33 such orderings today.

7. The statements of Secretaries of Defense and Chairmen of the Joint Chiefs of Staff before the Congress over the last 16 years demonstrate to the President a dramatic year by year measure of our decline.

VI. THREE REASONS FOR FAILURE

In my judgment there are three major reasons why the President has not yet discovered the extent of forthcoming Soviet strategic nuclear superiority. The first is his failure to review the information I have summarized. The second is that under our system it is easy, although misleading, to give equal weight to the opinions of uninformed authorities and national figures, and those of the informed. A paper pronouncing that the US is well off in the strategic nuclear balance can be submitted to him by a staff person who has no real background on the issues and who has had strong previous prejudices that more defense is bad and less is good.

This is given equal treatment to the views of the Joint Chiefs of Staff, past and present, the views of recent, and therefore best informed, Secretaries of Defense, such as Schlesinger and Laird, and those of the nation's best and most informed strategist expert and negotiator, Paul Nitze. The latter, for example, wrote *in 1976*, "Today, after a strategic nuclear counter force exchange under normal US alert conditions, the Soviet Union would hold superiority in all indices of capability except numbers of warheads, and even that sole remaining US advantage will be gone within two or three years." The third reason is that being in possession of such conflicting views, not properly weighted for their background and experience, President Carter, rather than giving careful study to the issues, tends to select the naively idealistic rather than the realistic alternative. No better recent example can be cited than the President's initial acceptance of the advice of novices Andrew Young and Hamilton Jordan to kill the neutron bomb and his overruling of the advice to build it given by the real expert, Cy Vance. The fact that other pressures subsequently led the President to ameliorate his initial bad decision does not invalidate the point.

VII. STRATEGIC FORCE LEVEL SETBACKS

Let us examine what has resulted in the strategic-force level area since Mr. Carter became President.

There were three systems available to the President with which to begin a relatively rapid return to strategic nuclear parity in the 1980s: the B–1 bomber, the mobile (MX) minuteman, and the long range cruise missile.

The B–1 strategic bomber has been cancelled, while the Soviet strategic Backfire bomber goes forward. (The Soviets deny that the Backfire is a strategic bomber and some in the US have agreed. Yet, within the last month, according to a secret memorandum from Secretary Brown to the President leaked to the New York Times, the Secretary has realistically acknowledged that our bomber defenses, now almost dismantled, are going to have to be improved because of the Backfire threat.) The cancellation of the B–1 bombers means that the aging, less penetrable B–52 must carry on until it is no longer operable, and will likely be replaced by extremely vulnerable substitutes. The existing preponderance of Soviet megatonnage, which could have been partly compensated by the B–1, will now grow more disparate.

The mobile minuteman (MX) development has been slowed down by the President. Our fixed ICBMs are now subject to prompt destruction in a Soviet first strike. The huge new Soviet missiles with MIRVed warheads several times larger than ours and with future accuracies, recently confirmed in the media, of .1 nautical mile, will be able to destroy 90 percent of our 1,054 ICBMs in a first strike, using only about 1,300 of the 5,000 or 6,000 MIRV ICBM warheads the Soviets will have. The number of MIRV warheads they have left after that will still be over twice the number they destroyed. There is a desperate urgency to regain the deterrent value of this leg of the triad. The proper course of action for the safety of our country was to accelerate the development of the mobile minuteman replacement to the vulnerable ICBMs. The decision to slow it down is a stunning setback to our national safety.

The long range cruise missile is the device which could most quickly restore a semblance of strategic nuclear balance because it can be deployed on airplanes, surface ships and attack submarines.

All of these platforms are available in large numbers. Deployment of the cruise missile on these platforms would regain a deterrent posture for the U.S. Yet, recent budget decisions have slowed down rather than accelerated the cruise missile development programs. Moreover, the cancellation of the B–1, which would have the capability to penetrate Soviet air defenses, made it more urgent to have a long range cruise missile to use from the much more vulnerable bomber platforms that we will now have, the aging B–52 and vulnerable replacements. The slowdown is another stunning setback to the country's safety.

VIII. SALT II SETBACKS

At the same time President Carter has been putting our national safety in jeopardy by budget decisions on strategic forces, he has been making similarly unsafe decisions in the strategic arms control field. In part he has found himself driven to these bad SALT II decisions because of the leverage he has given up in cancelling and slowing

programs without any Soviet quid in SALT II.

During its 16 months, the Carter administration has put forth a series of proposals to the USSR. The formulations have progressively worsened from the U.S.'s point of view.

In March, 1977 President Carter had Secretary Vance present two proposals at Moscow. One of these was a comprehensive proposal involving substantial mutual force reductions, coupled with significant limitations designed to restrain improvements in intercontinental ballistic missiles. The other proposal was more modest in nature—an effort to maintain earlier progress toward implementing the Vladivostok agreement while deferring for the future the resolution of those two highly crucial items left over from Vladivostok, the Soviet strategic Backfire bomber and the U.S. cruise missile.

The Soviets, in their standard negotiating fashion, savagely rejected the March proposals. The U.S. in its standard negotiating fashion, went back to the drawing boards to come up with a new proposal more advantageous to the Soviets and less so to the U.S. This was the May, 1977 proposals for a new negotiating framework. Secretary Vance suggested that the May proposal was designed to arrive at the same general result as the March comprehensive proposal, but over a longer period.

The new framework was to consist of three tiers. There was to be a first tier consisting of an eight year treaty similar to the U.S. March proposal. A three year protocol would contain items not yet negotiable for the longer period. A third tier was to be an agreed set of principles to guide the continuing negotiations on an agreement to come into effect upon the termination of the three year protocol. Unbelievably, this May proposal was given to the Russians without any clearance by the Joint Chiefs of Staff. Again, in standard Soviet negotiating style, the Russian rejected it and the Warnke team has been progressively improving SALT II from the Soviet point of view during the ensuing year.

The details of these proposals are complex. It is important that the American people understand their consequence, however.

Let me give two examples of the situation which will exist by 1985 under SALT II in that most dangerous element, the first strike ICBM strategic nuclear relationship between the U.S. and the USSR:

1. With regard to MIRVed ICBMs, the Soviets will have 5,000 to 6,000 such warheads to our 1,650, at least a three-fold advantage. The useful payload (throw weight) in those ICBMs will be eight to nine million pounds for the Soviets, compared to our 1.25 million, at least a six-fold advantage.

2. If Paul Warnke agrees to their current insistence that they be permitted to test a new unMIRVed system during the three year protocol, with regard to unMIRVed ICBMs (single warheads), the Soviets will have 500 or 600 in number compared to our 504, but with a Soviet megatonnage of 6,000 vs. the U.S. 850, at least a six-fold advantage.

In the non-first strike, less accurate submarine ballistic missile relationship, the U.S. will retain the advantage in numbers of warheads, but Soviets will have the advantage in both range and gross yield. The Soviets are proceeding to nullify this U.S. advantage in these less accurate sea-based retaliatory systems by developing their capability to evacuate cities and go underground.

Carter's cancellation of the B–1 destroyed a superior capability to penetrate Soviet air defenses in the bomber/cruise missile balance. Therefore, the 1985 balance will depend on the effectiveness of the Soviet bomber defense. Recent analyses suggest that the Soviets may by then have a barrier defense out to hundreds of miles beyond the Soviet periphery. For national safety, the SALT II agreement must authorize a U.S. cruise missile range greater than this defense perimeter. A range of at least 2,000 miles would be necessary. There is no evidence to suggest that the Warnke team understands the critical need for this range in SALT II. They are prepared to accept a 1,500 mile limit. This 1,500 mile limitation on cruise missile ranges, by preventing us from being able to fire our missiles from outside the Soviet's heavily defended perimeter, gives the Soviets immense advantage. Remember that the Soviets' missiles get a free ride into our air space because we do not have a credible air defense.

The Soviet Union has a simpler problem—U.S. air defenses that are essentially zero. Soviet bombers can sweep into the U.S. with relative impunity. Long cruise missile ranges are not important. No wonder we are witnessing their insistence at SALT II that there be a short range for the cruise missiles of both sides.

The SALT II agreement will, as now drafted, be impossible to verify. We must expect to see the Soviets exploit this opportunity to gain additional strategic advantage just as they exploited the ambiguities in SALT I to gain similar advantage.

The SALT II agreement increases still further the opportunities of the Soviet Union suddenly to break out of the deal with greatly increased deployments of anti-ballistic missiles and intercontinental ballistic missiles.

SALT II will be so structured that the Soviets have nearly all the negotiating leverage of superiority in measures of effectiveness. Heavy pressure will be on the U.S. to accommodate to the Soviet demands in SALT III negotiations. Given the history of U.S. accommodation to the Soviets' superior leverage in the SALT II negotiations, SALT III will almost certainly be worse. The time to consider such consequences is now before SALT II is ratified.

Perhaps the most striking aspect of SALT II is that it will restrict the U.S. from deploying those weapon systems necessary to regain stability and rough equivalency and to reverse the present trends. Among other limitations, we acknowledge that only the Russians have the right to deploy the huge ICBMs.

One can go on to point out that SALT II, not yet formally agreed, has already impeded our strategic nuclear program. President Carter has assured us that nothing in SALT II's three year protocol would affect the deployment of weapons after that three year period. Yet, he then approved his Budget Director's recommendation that the engineering and development of one phase of the Tomahawk cruise missile be slowed down because the future of the whole cruise missile program after the three year protocol remained in doubt.

IX. STRATEGIC BALANCE TODAY AND TWO RELATED MATTERS

In order to put across the true nature of the strategic balance today, it is insufficient to recite just the advantages in figures of merit in the strategic equation about which I have been talking. If one stops there, those who argue incorrectly that the U.S. today has "overkill" are able to get away with their false doctrine. One must go on to run through the likely consequences of a strategic nuclear exchange under the force balance which would come about under SALT II. The Committee on the Present Danger has written, "It has become the conventional wisdom to maintain that such strategic advantages do not matter.

Yet, detailed calculations demonstrate that under any of the strategic agreements now being considered, and assuming current programs continue (these words were written before President Carter's decisions to slow down the MX and cruise missile developments), regardless of whether the US or the USSR strikes first, the Soviets would destroy far more strategic targets and damage far more people and industries in a nuclear war. Paul Nitze has demonstrated in his analyses that after a Soviet-initiated counter force exchange against each other's nuclear forces, remaining Soviet forces would still be able to destroy the nuclear capacity of China and Western Europe, attack other military and population targets in the US to kill more than 100 million Americans, and still retain nuclear force weight in excess of that available to the US.

Analyses done while I was a member of the Joint Chiefs of Staff confirm this. The tragic truth is that in the face of these huge casualties, if the Soviet Union has exercised its impressive civil defense capability, they can expect to lose less than 10 million people. This is not "overkill." It is not one-half of the casualties the Soviets suffered in World War II. It is not as many Russians as Stalin slaughtered. It is not enough, given prospective US casualties in the same exchange, to deter the Soviets from aggressive acts. It is not "overkill."

In summary, President Carter's budget decisions on strategic nuclear forces have accelerated our decline to strategic nuclear inferiority. His decisions on arms control issues in SALT II are serving to codify the US strategic inferiority which his budget decisions are bringing about. He seems to be proceeding in the blind faith but with no logical rationale.

Three quick points in the non-strategic field are now pertinent:

1. The conventional military inferiority of NATO for many years has been justified in the light of the US strategic nuclear deterrent. In the years ahead we will no longer have that deterrent.

2. There has been hope that, in the absence of a capability in the 1980's to deter at either the strategic nuclear level or the conventional military level, President Carter would, at the very least, authorize the neutron bomb to restore some measure of deterrence to NATO. His delay of that program does still further harm to the national safety.

3. SALT II will interfere with our plans to regain conventional military capability with cruise missiles carrying non-nuclear warheads.

X. CONSEQUENCES OF US INFERIORITY

Now what is to be the consequence of the dramatic decline in US military capability. We are already seeing the consequence of burgeoning Soviet strategic nuclear and military superiority around the globe. Their violations of detente may be summarized as follows:

1. In the October, 1973 Yom Kippur war they authorized the sneak attack on Israel. They went on a strategic nuclear alert to threaten us three weeks before we went on ours. They exhorted Arab nations to embargo us and OPEC nations to quadruple their prices. They alerted airbourne divisions and sent equipment to assist in the attack. They used the umbrella of their military superiority to deliver an ultimatum to the US after the Israeli forces surrounded the Egyptian Third Army.

2. They violated the truce in Southeast Asia, providing both equipment and strategic advice to Hanoi as to how to test the US commitment to Saigon and, finding their theory proven that Mr. Nixon was prostrate, to overrun Cambodia and South Vietnam.

3. They invaded Angola, sending ships and aircraft with Cuban troops and Soviet equipment, liquidating the forces of the majority regime there.

4. They flew in Cuban troops and Soviet equipment to turn Ethiopia into a client state. Soviet generals assisted in the inva-

sion of the Ogaden. The Soviets have begun to use their power in Ethiopia to bring about changes in Somalia calculated to renew its client status.

5. They are training radical insurgents to defeat the black moderate regime coming to power in Rhodesia and will shortly accelerate these efforts.

President Carter must expect to see Soviet mischief increase as the world increasingly comes to recognize the military facts which I have reported here.

XI. ACTION REQUIRED

Only dramatic action now can begin to turn the tide.

In view of the incipient national disaster inherent in the SALT II strategic nuclear relationship with the Soviet Union, the time has come for heroic action from the two concerned co-equal branches of the government. I call upon the President to do the following:

1. Broaden your base of official advice. Bring the experience and judgment of a bipartisan group to your assistance on these matters. Include among them Dean Rusk, Melvin Laird, Paul Nitze, Eugene Rostow and Jim Schlesinger.

2. Review in depth the audit trail of the Soviet climb to strategic nuclear superiority by studying the minutes and tapes of the top level meetings of the Nixon/Ford years.

3. Review with the JCS the history of theoretical strategic nuclear exchanges between the US and the USSR in the SIOP/RISOP and PONAST calculations done since 1970, which now show grossly unfavorable exchange ratios.

4. Obtain the written, frank views of your present JCS on the state of the strategic nuclear balance and on the consequences of the current SALT II deal and any future modifications you may make to it.

5. Read what the Soviet leaders are telling their associates they intend to accomplish with their military supremacy.

6. Report candidly to the American people on the true state of the strategic nuclear balance in terms of JCS calculated outcomes for the last eight years and outcomes predicted during the next eight years. Report candidly the status of SALT I by comparing the assurances that the President gave the Congress as to what it meant at the time, with what the Soviets have actually done with it.

7. Regain a position of strategic nuclear parity with the Soviet Union by restoring the B-1, cruise missile, and MX programs and by negotiating true parity in SALT II.

I call upon the Congress of the United States, through its appropriate committees, to hold hearings and report to the American people on the following:

1. Compare what the Congress and the public were told about the meaning and impact of SALT I at the time it was submitted to Congress, with what SALT I has in fact become. Report the extent to which Soviet violations and exploitation of ambiguities have contributed to the present developments.

2. Portray the extent to which the US strategic nuclear capabilities vis a vis the Soviet Union have deteriorated in recent years and will further deteriorate in the years ahead under the prospective SALT II agreement. Report the extent of US strategic nuclear inferiority today and in the years ahead.

3. Recommend those strategic nuclear force expenditures which will begin to regain parity with the Soviet Union in the absence of a fair SALT II.

4. Submit a joint resolution of concern to the President urging that SALT II be renegotiated to achieve true parity at reduced levels of force and expenditures, and warning that SALT II in its present form will be rejected.

SALT II

Mr. THURMOND. Mr. President, a powerful editorial on the dangers facing the United States in the SALT II negotiations appeared in the April 20, 1978, issue of the Aiken Standard newspaper, Aiken, S.C.

It was a shock to me when I learned last fall of the position taken by our SALT II negotiators and I believe an agreement would have been reached then if members of Congress had not strongly objected.

As a result the dialog on this important issue has broadened and the editorial printed in the Aiken newspaper is a good example of the widening public participation.

Mr. President, I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARTER AND NEGATIVISM

The Russians, whatever else may be said about them, have never been slouches at a conference table. And they are demonstrating their toughness anew during the long-drawn Strategic Arms Limitation Talks (SALT II).

Sensing that the Carter administration needs a new agreement to jack up its sagging image and assuming the American people will wish to continue detente, almost at any price, the Soviets have steadily hardened their terms. They believe it's a simple matter of raising the ante and gaining new concessions.

Unfortunately, this Russian game plan has been all too successful.

No one has described better the perilous yielding of U.S. negotiators than Charles H. Wilson, a Democratic congressman from California and a member of the House Armed Services Commitee. Reporting on his visit to the Geneva conference site in the April Reader's Digest, Mr. Wilson said he was "shaken by the spectacle of an American negotiating team, the majority of which seemed oblivious to the reality of Soviet strength and bent on getting a treaty for a treaty's sake . . . motivated more by pressure to fulfill a Jimmy Carter campaign promise than to protect the security of the United States."

Indeed, a critical national debate is now being joined as other influential public voices speak out against the Carter administration's spineless SALT stance. Paul Nitze, former deputy defense secretary and now head of policy studies for the nonpartisan Committee on the Present Danger, has become an unofficial spokesman for the President's loyal opposition. He, Congressman Wilson and others warn that as it now stands, the SALT II treaty:

Exposes the Minuteman interncontinental missiles, our main land-based deterrent against nuclear war, to a first-strike destruction from superior Soviet missiles by the early 1980s.

Neutralizes the cruise missile, our ace-in-the-strategic-hole, by limiting its range and making it dependent upon our obsolete B-52 bomber force, now 20 years old.

Restricts our long-range missile-carrying aircraft while exempting the highly sophisticated supersonic Soviet "Backfire" bomber, which can strike any part of the United States with hydrogen bombs. (The Soviets have conned us into agreeing that these bombers are "non-strategic.")

Assures the Soviets will have at least twice as many intercontinental missile wareheads as the United States.

Permits the Soviet Union to keep its present force of 326 modern large ballistic missiles, capable of destroying U.S. missiles in their silos, while the United States, which has no MLB, would be permitted none in the future.

These are just some of the sobering, not to say staggering, concessions that the U.S. negotiators, led by Paul Warnke, have agreed to thus far, according to critics. If these conclusions are correct, and we have no reason to doubt them, one can only wonder what the remaining differences are that keep the Russians from signing on the dotted line.

When the SALT I agreement was signed six years ago, the United States enjoyed strategic superiority over the Soviet Union. The rationale for U.S. concessions then was that once the Russians achieved parity, there would be a freeze in the arms race. Instead the Soviet Union exploited SALT I to gain a marked strategic advantage over the United States.

That this happened should be reason enough for the Senate to insist that SALT II, instead of compounding SALT I's fallacies, in fact, halt the arms race on equal terms. We must not again sign a SALT treaty that is permissive for the Russians and restrictive for us. We would be better off with no treaty at all.

The chilling fact is that nothing less than our national survival is at stake in the fine print of the SALT II treaty.

UNNEEDED AND UNWANTED COMPLEXITY IN OUR TAX LAWS

Mr. HARRY F. BYRD, JR. Mr. President, in 1976, Congress enacted a comprehensive tax law—the 1975 Tax Reform Act. Included in this law was the first major change in the taxation of gifts and estates since the 1940's.

Many of the changes in the 1976 laws were welcomed and needed.

Unfortunately the 1976 law also included provisions for the carryover of basis of assets in an estate.

Carryover basis is a dramatic and fundamental change from prior law. Under prior law, when a person dies, his estate or his heirs received a new income tax cost basis for his assets—their Federal estate tax value.

But under carryover basis, the original acquisition cost of an assets will be carried over from a decedent to his heirs.

Often assets will have been held for a long period of time and, because of inflation, have a low, cost basis. When the estate or heirs sell this asset, they will then pay a tax based upon the difference between the original cost and the cost at the time of sale.

Carryover basis has, therefore, introduced an income tax along with an estate tax.

This fundamental change was never considered by the House of Representatives. It was never considered by the Senate Finance Committee, or by the Senate. It was placed in the 1976 law during the conference between the House and Senate.

The problems of carryover basis, which confront lawyers, accountants, and bank trust officers who must deal with the law, make it apparent that the Congress in 1976 failed to comprehend

the severe and serious ramifications of this part of the 1976 act.

Carryover basis can best be described as an enormous and complex legislative mistake. Complicated adjustments to determine the appropriate basis must be made for every asset in an estate. This is a difficult task in the simplest situations. For most estates, especially those with assets such as a stamp or a coin collection, the job is impossible.

Under carryover basis, extensive record keeping is now required. At the conclusion of my remarks, I will insert a copy of the recordkeeping forms which Fiduciary Trusts Co. of New York furnishes its clients for use to comply with the carryover basis law. As the memorandum accompanying these forms notes, records of this nature must be kept by everyone, not just a person who may have a large estate.

Not only will carryover basis affect individuals, it will also have adverse consequences for our Nation's businesses and farms, especially small businesses. Large corporations will not be materially affected.

The implications of carryover basis for small businesses and farm are especially important.

Carryover basis will create severe liquidity problems for small businesses and farms at the death of their owner. Carefully considered business arrangements negotiated under the old law to provide for liquidity are not useful, today, and must be reconsidered.

The double estate tax and income tax burden arising under carryover basis will often lead to forced sales or mergers with large corporations.

The long-range effect of carryover basis will be to reduce the number of small businesses and family farms and increase the size of big business.

It is now generally recognized that the current carryover basis law is unworkable. As Leonard M. Groupe, now a feature, consumer affairs writer for the Chicago Sun Times has remarked in an article in the former Chicago Daily News, which I shall insert in the RECORD at the conclusion of my remarks, has noted,

> The entire concept of carryover basis at death has become a nightmare to those responsible for both the planning and the settling of estates, small, medium, and large.

Legislation is now pending which will deal on an interim basis, with the problems of carryover basis. The Senate Finance Committee has agreed to H.R. 6715, the Technical Corrections Act. Included in this bill is a provision to defer the effective date of carryover basis until December 31, 1979. The committee vote to defer the effective date was 15 to 2.

The provisions of H.R. 6715 follow the deferral concept contained in legislation to defer the effective date of carryover basis introduced by me with Senators DOLE, HANSEN, ZORINSKY, HASKELL, LUGAR, TOWER, FORD, MORGAN, and HOLLINGS as cosponsors. This deferral will give Congress time to study, rework and revise the currently unworkable carryover basis law.

I urge my colleagues in the Senate to familiarize themselves with the carryover basis concept and the problems in the current law.

An excellent letter on this matter was written to the senior Senator from Vermont, Mr. STAFFORD, by Mr. John P. Crowley of the firm of Bishop, Crowley, Banse and Kenlan of Rutland, Vt.

I ask unanimous consent to include in the RECORD, Mr. Crowley's letter along with a letter and memorandum from Robert A. Garber, vice president and tax counsel for Fiduciary Trust Co. of New York, and forms which this bank provides their clients to assist in carryover basis recordkeeping, an article by Leonard M. Groupe, an article by John H. Butala, Jr., Esq., senior vice president of the Cleveland Trust Co., Cleveland, Ohio, a letter from the Committee of Banking Institutions on Taxation in New York, excerpts from an editorial in the American Banker, of November 28, 1977, excerpts of a letter to me from the American Bankers Association, and excerpts of a letter written to Senator GAYLORD NELSON, from Gerald M. Sheehan, assistant secretary, LaCrosse Trust Co., LaCrosse, Wis.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

BISHOP, CROWLEY, BANSE & KENLAN,
Rutland, Vt., February 13, 1978.

Hon. ROBERT T. STAFFORD,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR STAFFORD: I urge you to vote for the repeal of the carry over basis provisions of the 1976 Tax Reform Act.

Some of the specific problem areas are as follows:

(1) *Chattels:*

Stamp collections, coin collections, or for that matter chattel collections of any kind, now create a virtually impossible situation. The cost of each separate item must be ascertained and each item must be separately appraised so that the "fresh start" basis can be determined by the time-apportionment formula provided in the Code.

(2) *Securities:*

The impossibility of proving basis for listed securities because of stock splits, stock dividends, tax-free exchanges, and securities received by gift can be cited in some cases.

(3) *Repeated Acquisitions:*

Dividend reinvestment plans, mutual fund holdings, and common trust funds in which numerous Section 1023 (c) and (e) adjustments are required because of the constant small additions to the original holding demonstrate the incredible record keeping that can be required.

(4) *The Closely-Held Stock:*

Many closely-held businesses built up by the owner during his lifetime have little or no cost records to aid the Executor of his estate. He never intended to sell.

(5) *Real Estate:*

Although the recorded deed will give the acquisition date of real estate, it does not help us as to additions or improvements. And each addition or improvement is, of course, an acquisition for cost basis purposes. Each "substantial" improvement will be regarded as a separate improvement for purposes of the time-apportionment determination of the "fresh start" value. However, an appraiser may find it impossible to appraise an improvement separately.

(6) *The Incredibly Complex Estate:*

An estate with numerous holdings of routine assets may require pages of carryover basis adjustment. Some persons have already written to members of Congress, describing an estate generally, and then simply attaching page after page of computations making the required adjustments.

(7) *Duty to Provide Cost Basis Information:*

The Executor is required to provide cost basis data to the IRS and to beneficiaries of all items in the gross estate. In some cases, the Executor may have a nominal probate estate but be subject to onerous duties and subject to penalties for failure to give donees such data as to nonprobate assets, such as joint and survivorship assets.

If it appears it will be impossible to repeal the carryover basis provisions, the moratorium sought by Senator Byrd's amendment will be an acceptable alternative, for the time being. The "clean-up" provision proposed will not help the problem, but will only add to the complexity and difficulty of complying with the law.

Thank you very much for your consideration.

Best regards,

JOHN P. CROWLEY.

COMMITTEE OF BANKING
INSTITUTIONS ON TAXATION,
New York, N.Y., February 27, 1978.

Re Carryover Basis.

Hon. HARRY F. BYRD, JR.,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BYRD: The Committee of Banking Institutions on Taxation is composed of approximately seventy-five senior tax officials of various member banks.

We are deeply concerned with the proper technical administration of the nation's tax laws. We are especially concerned with the new carryover basis provisions which were enacted into law by the Tax Reform Act of 1976.

It is clear now that there are serious defects with the concept of carryover basis. We have worked with it, in our capacity as fiduciaries, for more than a year and find the law too burdensome and complex for professionals as well as for individual fiduciaries.

We have offered comments and suggestions regarding the Technical Corrections Act which might ameliorate some of the difficulties, but we strongly recommend that before any further tinkering is done, the application of carryover basis be delayed until all proposals are reviewed.

We favor deferral of carryover basis until December 31, 1979. We have reviewed and analyzed the current proposals to "patch up" carryover basis, and do not think it is wise to attempt to defer and to "patch up" carryover basis at the same time. Much more time and study is necessary than has been devoted to the current "patch-up" proposals, to develop a law which may make carryover basis workable.

We would be happy to offer the benefit of the experience of our members in the search for practical solutions to the real problems inherent in carryover basis now.

Sincerely,

ROBERT ALAN GARBER,
Chairman, Conference Committee.

[From the Chicago Daily News, Dec. 29, 1977]

ESTATE TAX REFORMS ARE MIDDLE-CLASS NIGHTMARE

(By Leonard M. Groupe)

When Congress reformed the estate tax law in 1976, it soaked the rich so much that I'm afraid the middle-class got somewhat drenched, too.

Middle America naturally rejoiced when the estate tax exemptions were increased by the Tax Reform Act of 1976. We also snickered and said, "Right on," when such fat cat loopholes as generation-skipping trusts and others were closed. And I suppose most of us said, "Why not," when we read that heirs would generally have to pay higher

capital gains taxes when selling inherited property.

We must have been thinking about the Rockefellers, the Vanderbilts and the Wrigleys.

It is now becoming apparent that the new law could saddle millions of middle-class estates with the very expensive, very difficult, and sometimes impossible task of proving the original cost basis of almost every single item of inherited property.

THE 'CARRY-OVER' DILEMMA

What is involved is called the "carry-over basis at death."

Formerly, the cost basis of inherited property was legally assumed to be its fair market value at time of death. Ordinarily it made no difference when it was bought or how much the deceased actually paid for it. This is often impossible to determine anyway. Under the new law however, the deceased's cost basis, often much lower than the then-market value, is carried over and becomes the heir's cost basis. If ever he sells it for more than this, the profit will be taxed as a capital gain.

To ease the impact of this fundamental change in the law, a "fresh start" is provided for property owned by the deceased on Dec. 31, 1976. The cost basis for such property is "stepped-up," as in the past, to the fair market value on that date. The increased value after that date however, is subject to capital gains tax when sold by the heir.

That works out OK for stocks and bonds for which there is a published market value on that date. But the way the Dec. 31, 1976, value of other kinds of property must be figured out is where the sadistic joke comes in.

A THEORETICAL CASE

Let's say a man dies a few years hence, on Sept. 19, 1984. He is an avid (and prosperous) stamp collector, and over the past 40 years or so has managed to accumulate a collection of, say, 10,000 stamps which will have an aggregate value of, say, $20,000 by the time he dies and leaves them to his son. The executor of his estate will apparently have the duty of determining for each separate stamp the date and cost of its purchase and its fair market value on the date of death. The law assumes that any increase in value had been at a constant rate from the date of purchase to the date of death. The actual proportion of that increase from the date of purchase to Dec. 31, 1976, must be calculated for each stamp. When this is added to the original cost, the value of each of the stamps on Dec. 31, 1976, will have been established. I kid you not.

Don't ask, "But what do you do if you don't know either when the deceased bought a stamp or its cost?" Nobody knows the answer to that question.

CONCEPT IS A NIGHTMARE

The entire concept of carry-over basis at death has become a nightmare to those reponsible for both the planning and the settling of estates, small, medium and large.

Should any executor fail to calculate and report to the IRS and to each heir the properly adjusted basis of each individual item of inherited property, the law makes that executor subject to personal liability for penalties up to a maximum of $7,500.

The astonishing thing is that these difficult, expensive and very burdensome cost reconstructions and basis determinations are not limited to estates big enough to require filing of an estate tax return.

The conservatives in Congress are trying to repeal this "carry-over basis at death." It's the first time I recall agreeing with them.

[From the Ohio Banker, October 1977]

THE CARRYOVER BASIS LAW—COMPLEXITY TO THE "NTH" POWER

(By John H. Butala, Jr.)

Perhaps the most controversial tax legislation passed by Congress in several decades is the "carry-over basis law," enacted as part of the Tax Reform Act of 1976.

Under prior law, when a person died, his estate or his heirs received a new income tax cost basis for his assets—their Federal estate tax value. This was commonly referred to as a "step-up" in basis at death.

WORKING IN REVERSE

However, the prior law worked in reverse also. There could be a "step-down" in basis. The basis of an asset became its Federal estate tax value even though the decedent had purchased it at a higher price. During the lackluster stock market of the past several years, step-downs in basis have been a common occurrence.

Nevertheless, the "reformers" in Congress conducted a relentless attack on the "step-up" in basis as a major loophole through which billions of dollars of appreciation escaped tax. To take advantage of the loophole, one needed merely to die.

Their efforts met with success in the Tax Reform Act of 1976 through a combination of somewhat irregular legislative procedure and an improbable compromise alliance between two members of the House Ways and Means Committee with diametrically opposed political philosophies. The result—the carry-over basis law—has been characterized by Dr. Gerald Brannon, a tax liberal on the faculty of Georgetown University, as a "disaster" involving "hopeless complexity."

FUNDAMENTAL PREMISES

The fundamental premise of the "carry-over basis law" is deceptively simple. The estate or heirs of a decedent assume his income tax cost basis for assets bequeathed by him, or, in other words, the decedent's basis is "carried over" to his estate or heirs. No capital gains tax is incurred until the assets are actually sold.

The passage of the new law was in part aided by the assumption that the act of selling is voluntary, that the heir can time his sales and thus control his tax fate. In practice, this is frequently not so.

REALITY

An estate generally is faced with substantial obligations: the decedent's debts, administration expenses, and estate and inheritance taxes. In many cases, a sale of much of the estate is necessary to meet these obligations. Unfortunately, a sale under the carry-over basis law generates an additional obligation, the capital gains tax, which in turn requires a further sale, generating still further capital gains tax, and so on—a progressive increase in the liability or "mushroom" effect.

If a decedent dies possessed primarily of a single, indivisible asset, such as a ranch, the entire estate must be sold, and the carry-over basis becomes in effect an expensive capital gains tax at death.

The disastrous complexity results from a series of required adjustments to the carry-over basis. The first of these is the "fresh-start" or "minimum basis" adjustment. For purpose of *gain*, each asset is given a minimum basis of its actual or presumed value on December 31, 1976. The adjustment is designed to "forgive" tax on appreciation accruing prior to December 31, 1976.

For purposes of *loss*, however, basis remains its actual cost. Thus we now have a "floating" dual basis for each asset subject to the minimum basis law: the December 31, 1976 value for gain and actual cost for loss. Not until the asset is sold will the taxpayer know which basis will apply.

APPRAISAL

Prior to enactment, it was thought that the minimum basis adjustment might require a "National Appraisal Date," a requirement that every asset in the United States, including stocks, bonds, jewelry, real estate and closely-held businesses, be appraised as of December 31, 1976. Individual appraisers and those owning interest in appraisal firms had visions of leaving their heirs substantially enlarged estates (and larger carry-over basis problems).

However, Congress avoided a "National Appraisal Date" by specifiying that only marketable stocks and bonds are actually to be valued as of December 31, 1976 to determine minimum basis. The minimum basis of all other assets is a "formula" value determined by a time-apportionment formula borrowed from the British law.

MINIMUM BASIS

The minimum basis of a nonmarketable asset is its actual cost plus a ratable share of appreciation between date of acquisition and date of death. For example, assume a decedent bought an asset for $100 on December 31, 1971 (five years before December 31, 1976) and died on December 31, 1981 (five years after having a value in his estate of $300. The minimum basis is $200—the purchase price of $100 plus 50% of the $200 of appreciation.

However, the adoption of the time-apportionment formula in place of a National Appraisal Date simply substituted intolerable complexity for hopeless impracticality.

The formula must be applied to each asset in the estate. Each asset must be separately appraised and its cost separtely determined to calculate the ratable share of appreciation. In many cases, basis cannot be determined, and in other cases, such as extensive stamp and coin collections, the expense incurred in determining minimum basis by appraising each item separately may exceed the cost of the collection.

PROPOSED SOLUTIONS

Congress has been made aware of these unhappy facts, and has proposed a solution in the Technical Corrections Act of 1977, at least for chattel properties. A proposed "simplifying" amendment provides that the minimum basis shall be not less than—

"(i) the value of such property (as determined with respect to the estate of the decedent without regard to Section 2032), divided by (ii) 1.066 to the *nth* power where n equals the number of full calendar months which have elapsed between December 31, 1976, and the date of decedent's death.

Further comment appears superfluous.

The minimum basis for real estate has its own quagmire of problems. Each substantial improvement is to be treated as a separate acquisition. Thus, the appraiser must be instructed to appraise the original structure and each improvement separately. In effect, he must visualize by a sort of reverse telescope process what the property must have looked like many years before the improvements, and appraise the original structure as of the date of death, a process which should challenge the conceptual abilities of the most adaptable of appraisers.

Assuming that the executor is not worn out by the "fresh-start" adjustment, he must work his way through three other adjustments and then he is directed by law to advise the beneficiaries and the Internal Revenue Service of the final adjusted carry-over basis of the assets distributed to beneficiaries. Failure to do so subjects him to monetary penalties not to exceed $7,500 per estate.

ADJUSTMENTS

The most significant of these further adjustments are those designed to increase the carry-over basis by the amount of any Federal and State death taxes attributable to the appreciation element in the assets of the estate.

In the absence of such an adjustment, combined income taxes and death taxes could exceed 100 percent. For example, assume a beneficiary inherited an asset having a Federal estate tax value of $100 and a carry-over basis of zero, and that he sells the asset immediately after death. The highest marginal capital gains tax rate (including the preference tax) is approximately 41 percent. Therefore, in the absence of the adjustment under discussion, the $100 asset could generate a Federal estate tax of $70 and a capital gains tax of $41 or a total of $111. No method of collecting such a tax has yet been devised.

The problem is avoided by building up basis by the death taxes on the appreciation. In our example, the adjusted basis is therefore the actual cost of zero plus the death tax adjustment (assumed to be $70), or $70 in total.

As is usual in these cases, the conceptual explanation of the adjustment in terms of one asset creates a misleading aura of logic and simplicity. In practice, the executor is seldom faced with one asset. He must deal with dozens of assets, some with appreciation and some with losses, some generating tax and some not (because they qualify for the charitable or marital deduction), and he must therefore apportion death taxes to the appreciation in each asset in accordance with elaborate (and defectively structured) formulae in the Federal statute.

Because the Internal Revenue Service audits all Federal estate tax returns filed and frequently changes the tax liability, the basis of all assets is effectively "suspended" during the administration of an estate. It cannot be considered final until the Federal estate tax credit is completed since a change in the value of any asset or in the amount of the Federal estate tax renders the executor's adjustments incorrect. If assets are sold during the period of adminstration, amended tax returns will be required to correct the capital gains reported. "Tentative" tax returns will be a way of life.

As in the case of the minimum basis adjustment, each purchase, not merely each asset, is subject to the death tax adjustment.

If the decedent purchases 100 shares of I.B.M. stock on five different occasions, five death tax adjustments are required for the single holding of 500 shares. If the decedent participates in a repetitive purchase arrangement, such as a quarterly dividend reinvestment plan, a mutual fund in which capital gains are reinvested, or a bank common trust fund, the administrative detail in his estate may be suffocating.

For example, if he had participated in a dividend reinvestment plan for ten years, his executor must make 40 separate Federal estate tax adjustments with respect to this one holding. Under the proposed Technical Corrections Act, if the Federal and Ohio taxable estates are different—and they frequently are—an additional 40 separate adjustments for Ohio estate taxes will be required. The principal problem in some estates may be to find an executor willing to act.

The carry-over basis law is unnecessarily intrusive in all phases of financial planning. Its effect must be taken into account in estate planning, probate decisions, and even lifetime financial transactions. No longer can a testator desiring to treat his family equally simply leave Stock A to his son and Stock B to his daughter, even if they have the same value. They have radically different tax effects.

In fact, many testators may now direct specific assets to particular beneficiaries in an attempt to match up the cost bases of the assets with the beneficiaries' tax brackets. Others will instruct their executors to do this—much to their discomfort.

Elderly taxpayers will be reluctant to sell appreciated assets acquired before December 31, 1976, since the minimum basis will be lost. It is available only to the taxpayer's estate or his heirs.

On the other hand, it may be wise to sell appreciated assets acquired after December 31, 1976 on one's death bed since the capital gains tax will be a deductible debt in calculating the taxable estate. The ramifications are so pervasive and the opportunities for malpractice so enhanced that lawyers are attending tax seminars in numbers that threaten to exceed those for Star-Wars.

There is further gloom on the horizon. President's Carter's proposed tax reform would tax capital gains at ordinary income tax rates. If accepted, its impact on estates required to sell assets to meet estate obligations will be so horrendous that even the decedents will likely reemerge from their graves to protest.

Fortunately, Treasury officials plotting the next round of tax reform are aware of this, and it is likely that the carry-over basis law will not survive if the Carter tax reform is adopted. It will likely be supplanted by some form of appreciation tax at death which, although it appears to be harsher, should actually be administratively easier to comply with and economically more acceptable than the carry-over basis law.

[From the American Banker Nov. 28, 1977]

CARRYOVER: BACK TO OLD FRESH START

Reformers may talk tax simplification but legislators, wittingly or not, are committed to tax complication, because their task is to fit together a multitude of compromises.

One item of tax complication which needs correcting promptly is cost basis carryover. As an issue, it does not affect the mass of lower income earners whose taxpaying has indeed been simplified by increasing the standard deduction and thereby excluding them from filing returns.

But it will affect them more as time goes by and their incomes increase, they acquire assets, and concern themselves with distributing their estates. And it already is a major concern of the trust industry and its constituents—lawyers, executors, probate judges and heirs.

Though it had little support and strong opposition from experts, carryover basis was slipped into the Tax Reform Act of 1976. Under it, appreciated property acquired from someone dying since last Dec. 31 no longer uses his estate tax basis as the cost basis for income tax purposes when the asset later is sold.

Instead, the property generally will carry over the decedent's cost basis to his heirs, though there is what is known as a "fresh start" provision. This allows the asset's value on Dec. 31, 1976, to be used as the basis, which is easy enough to determine for marketable securities.

All other property comes under a mandatory special rule designed to avoid appraisals as of last Dec. 31. This assumes that any appreciation from the time of acquisition to the person's death accrued at the same rate over the entire period, so it can be pro rated and only the appreciation attributable before last Dec. 31 added to the decedent's basis.

That sounds fair but entirely too many heirs, executors and trust bankers are unable to determine what Uncle Charlie's basis was in his house because he and Aunt Min owned it jointly and no estate tax return had to be filed when she died 10 years ago so no appraisal was made at that time.

Nor do they know the cost basis of Uncle Charlie's stocks because they were kept in street name and since his original broker was merged into another firm, the records are incomplete.

Why do they need to know this if a Dec. 31, 1976, fresh start is permitted? Because that fresh start applies only if there was a gain when Charlie died. A capital loss is reckoned from his original purchase. And Charlie's heirs at the outset do not know what they have, a gain or loss.

So the fresh start is not entirely fresh. Survivors still have to go back and establish Uncle Charlie's basis. Better to go back to the old system where everything began anew at the time of death.

Sure, capital gains go untaxed, substantial gains in some cases. But the effort to close that loophole imposes a burden which exceeds the loss. It is like spending $100 of police, clerk and court costs to collect a $2 parking ticket.

A couple of bills are pending in Congress to repeal cost basis carryover and go back to the old system when a fresh start was indeed a fresh start. One was introduced by Rep. Barber B. Conable Jr., R., N.Y., ranking Republican on the House Ways and Means Committee.

Mr. Conable told an American Bankers Association tax workshop last week, however, that Congress will take no action on the measure this year. Energy and Social Security will crowd it out.

AMERICAN BANKERS ASSOCIATION,
Washington, D.C., March 17, 1978.

Hon. HARRY F. BYRD, JR.,
U.S. Senate, Washington, D.C.

DEAR SENATOR BYRD: We are writing this letter to you and your colleagues in the Senate to set forth the position of the American Bankers Association on a matter involving the carryover basis system which will be a part of the Senate's consideration of the Technical Corrections Act of 1977 (H.R. 6715) this Spring.

1. The American Bankers Association advocates the repeal of the carryover basis system and a return of the basis system that prevailed prior to the enactment of the Tax Reform Act of 1976.

2. The ABA supports the passage of H.R. 6715 as reported out by the Senate Finance Committee, i.e. with a 3-year moratorium provision and without so-called clean-up.

3. The ABA calls for hearings on the carryover basis issue which would provide an opportunity to fully explore:

(a) the wisdom of repealing carryover basis; and

(b) the technical adequacy of draft clean-up proposals prepared by those who advocate the continuation of carryover basis.

4. The ABA considers all previously proposed clean-up proposals and particularly S. 2461, sponsored by Senator Hathaway, to be inadequate in scope and technically deficient in content.

Sincerely,

ROBERT L. HUNT.

LA CROSSE TRUST CO.
La Crosse, Wis., September 19, 1977.

Hon. GAYLORD NELSON,
Russell Office Building,
Washington, D.C.

DEAR SENATOR NELSON: The Tax Reform Act has unquestionably imposed some very complex duties and responsibilities on Executors of estates and probably the most complex lies in the area of carryover basis. Needless to say the officers of our corporation have spent many hours of reading, discussion and listening to lectures in an attempt to understand the full impact of the carryover basis law and how to implement its commands. Few, if any, can honestly say they fully understand the procedure to be followed for compliance. What we do under-

stand is that we are appalled by the complexity and problems created for fiduciaries under carryover basis. We pity the individual executor who will, no doubt, have to pay healthy fees to his attorney for help and advice to comply with carryover basis in an estate that prior to 1976 would not have been that complicated.

The following situations represent some of the problems we have encountered or foresee encountering.

CHATTELS

Stamp collections, coin collections, or works of art create an impossible situation. The cost of each separate item in a collection must be ascertained and each item separately appraised so that the "fresh start" basis can be determined by the time-apportionment formula.

SECURITIES

The problems of securing basis information for securities is mind boggling. The law allows for a step up basis for listed securities. This should seem to simplify, at least for pre 1977, the valuation of stock, but it doesn't. The Executor still must determine original cost basis for purposes of loss. The problem is compounded by the impossible task of proving basis for listed securities of stock splits, stock dividends, gifted securities, and dividend reinvestment programs. In our experience few deceased investors keep adequate records of pre 1977 investments to document their original basis. The same problems will occur for deaths after 1977 and will be further complicated by the fact that no step up basis will be afforded in these estates. Actual basis for post 1976 investments will be needed for gain and loss. There is no reason to believe that investors will keep any better records in the future than in the past. The fact is that individual investors are oftentimes unaware of the effect of current law or the burdens it places on their executors and even if aware, very few understand its meaning.

THE CLOSELY-HELD STOCK

Many closely held businesses have little or no cost records to aid the Executor of his estate.

REAL ESTATE

Cost basis of real estate may not always be as difficult to discover as are basis for securities, but this does not help us as to values, as to additions or improvements. Each addition is, of course, an addition for cost basis purposes. Finding the cost basis on each substantial improvement for purpose of time-apportionment determination of the "fresh start" value may be an impossible task. Even with the minimum basis step up of $60,000.00, many homeowners in our community, due to the surge of inflation in real estate value, may find themselves with a step up basis situation even with comparatively modest estates.

COST BASIS INFORMATION

The Executor is required to provide cost basis information to the IRS and beneficiaries of all items in the gross estate and failure to do so may result in cash penalties. In some cases, the executor may have a nominal probate estate but be subject to penalties for failure to disclose to beneficiaries such data as to non-probate assets, such as joint and survivorship assets.

These are only a few objections that we have to the present carry over basis law and they are far from completely discussed in this letter. It is quite evident from our experience and understanding of this law that an estate with numerous holdings of routine assets may require pages of carry over basis adjustments. This paperwork would not even reflect the hours of searching the decedents records for information in order to make these computations. It has been our experience that quite often this information must be found, if it exists at all, within piles of papers spread throughout the decedent's residence. Even when a spouse survives, the spouse knows or remembers little of this information. If the information can not be found easily, must the Executor check every scrap of paper in the residence before he can give up looking? Then where does he turn to find out the basis information?

The amount of record keeping as a result of the new law is incredible. The Executor will have to keep track of up to four different valuation figures (i.e. date of death, 6 months value, original cost basis, step up basis) and each beneficiary at least two (i.e. one for loss, one for gain). If ever a law was passed which, in its practical application, is totally unworkable, this is it.

Sincerely,

GERALD M. SHEEHAN,
Assistant Secretary.

FIDUCIARY TRUST COMPANY OF NEW YORK,
TWO WORLD TRADE CENTER, N.Y.,
February 27, 1978.

Re Carryover Basis.
Hon. HARRY F. BYRD, Jr.
U.S. Senate
Washington, D.C.

DEAR SENATOR BYRD: In an effort to assist you and your colleagues in an approach to some of the problems inherent in the present carryover basis provisions, we are pleased to enclose a memorandum, with forms attached, concerning some of our experiences with carryover basis.

We believe that before any changes are made in the law in this area, the application of carryover basis should be delayed until the proposals for repair of the law can be reviewed. To attempt to amend these provisions at this time would not afford the nation's practitioners the opportunity to comment and offer the benefit of their considerable experience.

Of course, we would be pleased to offer further commentary or assistance, if you think it necessary.

Sincerely,

ROBERT A. GARBER.

MEMORANDUM REGARDING CARRYOVER BASIS

FIDUCIARY TRUST COMPANY OF NEW YORK,
February 22, 1978.

A BRIEF DESCRIPTION OF FIDUCIARY TRUST COMPANY OF NEW YORK

Fiduciary is an independent trust company founded in 1931. While our services are provided to clients from coast to coast, we are not a banking giant by New York standards—we currently have under management and custody somewhat under $4 billion. We also act as trustee and executor. Individual tax returns and trust and estate accountings are prepared through a subsidiary. We do no commercial banking business. Our work as trustee and executor is for a broad spectrum of individuals and various kinds and sizes of trusts and estates nationwide.

Like other professionals, we have made a serious attempt to cope with carryover basis. So far our efforts have failed because the new law on carryover basis is a nightmare of burdensome detail and complexity.

A BRIEF SUMMARY OF THE CARRYOVER BASIS PROVISIONS

The basic provisions appear simple enough. The Tax Reform Act of 1976, by the codification of IRC § 1023, terminated the long-standing rule that property took a new basis, for income tax purposes, in the hands of a decedent's estate or heirs. Now the general rule is that the cost basis of property received by the decedent's estate or heirs will be the same as the decedent's immediately before his death, with certain adjustments.

a) The "fresh start" adjustment raises the basis, for determining gain, of property which was held by the decedent on December 31, 1976 and on that date had a value in excess of the decedent's basis. Marketable securities are to take the actual December 31, 1976 value. All other types of property are subject to a special rule in which appreciation is deemed to have occurred ratably from the day of the decedent's acquisition.

(b) A further adjustment is made for the taxes attributable to appreciation of particular property on which federal (and state) estate tax is paid.

(c) Another adjustment is then made to provide for a "$60,000 minimum" basis for all of the decedent's property, allocated among various properties in proportion to appreciation.

(d) State inheritance taxes may trigger another adjustment.

(e) A special adjustment applies to "personal and household" effects. Such property, with a total value of no more than $10,000 may take the estate tax value, as under prior law. The designation of property subject to this special exclusion is elective.

The carryover basis provisions apply to everyone—not just to those persons whose estates are big enough to require an estate tax return. For example, it is safe to say that anyone owning a house will be reached even though other assets are minimal.

A BRIEF ACCOUNT OF OUR EXPERIENCE WITH CARRYOVER BASIS

The balance of these comments records some of our efforts and procedures to achieve, on the part of our customers and ourselves, compliance with the carryover basis provisions. Where possible, expenditure of man-hours (or woman-hours) is mentioned as an index of costs.

As mentioned above, carryover basis applies to everyone. It doesn't matter whether or not an estate is subject to tax. The system won't work unless each person owning property, no matter how little, keeps detailed records available to his survivors at death. Costs must first be known in order to apply the $60,000 minimum. The elective exclusion for "personal and household effects" can be more than utilized, for example, by a family auto and an old pickup truck. It is impossible to believe that any significant proportion of those who may be affected by the new provision know about it.

Our first practical experience with carryover basis as executor involved the estate of a meticulous attorney who died within a fortnight of the effective date of January 1, 1977. The estate totalled about $600,000 and held 140 different securities, including municipal bonds and municipal bond investment trust certificates. The decedent held his securities in a custody account with Fiduciary as well in a brokerage account and in a safe deposit box.

Most of the cost bases in the custody account were on our records. However, the bases of "outside" assets had to be found by researching the decedent's records (which were uncommonly good) and by writing to diverse parties. At least twenty man-hours were spent to obtain the missing cost bases, and to adjust for capital changes.

During the first fiscal year of administration ninety-two securities were sold to raise cash for death taxes and administration purposes. The sales schedule was fifteen pages long and contained 172 different cost bases.

It took at least twenty-five more man-hours to establish whether carryover basis, fresh start "in limbo," or fresh start with "death tax add on" applied and to set up the appropriate costs on the sales schedule. It took about fifteen additional man-hours to check the final product.

In the case of securities with various lots, each separate lot must be scrutinized very carefully to determine if a gain or loss is realized.

In all cases the procedure is to compare the decedent's cost basis, the December 31, 1976 fresh start value and the sales proceeds. If the decedent's cost exceeds the proceeds, then the decedent's cost is used. If his basis is less than the proceeds, the fresh start value is used. If, however, the fresh start value is less than the proceeds, it may be adjusted, up to the fair market value on the date of death (or the alternate valuation date), by multiplying the appreciation by the death tax factor. Several cost bases must be calculated for each asset, each lot of securities and even each dividend reinvestment.

Unless the estate tax return is accepted as filed, the death tax adjustment will change with any change in the return. This will result in an amended fiduciary income tax return having to be prepared and additional man-hours spent. Further, the mandatory advice to heirs concerning carryover basis would, presumably, require redoing (perhaps, in some cases, after an asset has been sold and reported by an heir on his own income tax return).

The same problem will occur in the second fiscal year of the estate if any of the decedent's securities are sold during this period.

We estimate that more than sixty man-hours have been expended to date, with more to come, all because of carryover basis for the lawyer's estate.

Shortly thereafter we acted as executor for the estate of a decedent who was ninety-two years old at the time of his death. He was also an active, lifetime investor, though not a large one. No brokerage slips were retained, but the decedent kept a voluminous ledger recording purchases and sales which might have proved helpful for assets we did not manage. Many entries were indecipherable, however. At his death he owned eighty-three different securities, including thirteen mutual funds which, at his request, generally reinvested dividends. We were obliged to do extensive research. Those mutual funds which eventually responded to our requests for information required a fee before so doing—an expense directly attributable to carryover basis. (In many cases the fee exceeded 10% of the value of the reinvested dividends).

The same decedent also owned an undivided half interest in commercial realty in his hometown, Montgomery, Alabama. His son, the devisee of this property, needed to know the adjusted basis because he was thinking of selling the property. We had to spend many man-hours in the computation of what was, at best, an estimate since the adjustments for the federal and Alabama taxes could not yet be made. When the U.S. and Alabama returns are filed and possibly audited, revisions will surely be required. We discovered that the Montgomery property was inherited by the decedent nearly thirty years before his death but records regarding the prior estate were simply unavailable. We needed a starting cost basis and also had to determine the cost of subsequent improvements and the amount of depreciation. An appraiser gave us the appropriate value of the land and building as it was three decades ago—for a fee of $500. The total value of the decedent's half interest was finally determined to be $27,500.

Real estate may represent the single largest asset in the average estate and may be the most difficult to which to apply carryover basis. A home, in a typical stable family situation, often passes from one generation to another. Or residences may have been exchanged, for tax purposes, more than once for more expensive ones with the basis of the first home carried forward. Many Americans have worked for a vacation cottage, which is often improved year after year by various family members. When the time comes to compute the carryover basis of such property the typical personal representative of a decedent—a widow or child—may not want to or be able to turn to professional help. Yet the complex duties of the law regarding carryover basis will be mandatory.

There have been many comments concerning the particular difficulties of obtaining costs of assets other than marketable securities, in addition to real estate. Such assets could include antique autos or specialized libraries. A common such property is represented by the proprietorship of a small business, built by the decedent's labors over decades. The eroding effects of inflation linked with graduated tax brackets may rob the family of some of the rewards of the proprietor's efforts; to require time and effort on historical cost records and adjustments cannot be helpful, either.

The case of valuable collections of postage stamps has often been cited. Many of our clients are collectors of art as well as other less severable assets and it is still not clear how such collections may be valued, especially where value is primarily attributable to a composite, rather than to individual units of a collection. As the law now stands, each asset—including individual postage stamps, coins or the like—must have its own basis for purposes of carryover and fresh start. We believe this will prove to be an unreasonable burden insofar as an executor's time and effort is concerned.

To classify such assets as "personal and household effects" may be neither accurate nor helpful. Such classification, we believe, is not used by careful drafters of testamentary instruments because of its ambiguity. Further, in exercising the election regarding the $10,000 exclusion for "personal and household effects" the executor may be forced to discriminate among those to whom such assets are distributed if the value of all such items is (or is later determined to be) more than $10,000.

One "household effect" in a recent estate was a Steinway piano which was about forty-five years old. It was appraised for estate tax purposes at $400—a figure we needed to know in order to make the appropriate election. A friendly neighbor of the decedent recalled that many years ago the Steinway was repaired and refinished. Research was required. Under the applicable rules, "substantial improvements" to carryover basis property is to be treated as separate from the property itself. The "personal and household effect" exclusion was completely used by other property. How should we compute separate cost bases for the instrument itself and for the replaced components? Certainly the hours we spent in research regarding the Steinway was disproportionate to its value.

Carryover basis in a number of ways places an executor in difficult fiduciary positions. For example, when we distribute assets the particular interests of the legatees may have to be considered. Should we distribute cash, or high basis or low basis assets in kind? Property with the same market value may not be the same for tax purposes. Special problems in cases of surviving spouses or charitable legatees may cause us to spend many man-hours in detailed and complex computations.

Some of the decedents for whom we act as executor had unused capital losses when they died, and we find the concept of carryover basis not equitably realized in that there is no carryover of such losses. Additional lifetime planning is also required for those with substantial losses.

We have seen, of course, a great deal of time spent in such planning because of carryover basis, virtually all of which represents toil which is not easy to justify. For example, the use of the marital deduction, well understood before, is now causing more planning effort. We believe that time must be spent now in becoming proficient in some of the problems inherent in blending carryover basis with a myriad of other Code provisions. We are spending many man-hours in learning appropriate drafting techniques in order to work better with our clients' counsel who may possess widely varying degrees of expertise.

In order to assist our clients (and, eventually, ourselves as executors) we have drafted forms, together with instructions, to be used as records of cost bases for the following types of assets:

Tangible Personal Property;
Residential or Recreational Real Estate;
Business or Rental Real Estate;
Stock in Cooperative Apartments;
Non-Marketable Securities;
Partnership Interests;
Oil, Gas and Mineral Interests; and
Intangible Property Other Than Securities.

The forms and instructions are attached. They are not complete—we do not believe they conveniently can be. They merely act as reminders.

In regard to these forms for the recording of cost basis information, we must report some difficulty in finding a suitable approach to facilitate their use. Our clients are not enthusiastic, and we are faced with a developing business problem. Even when made aware of the necessity, they generally find the entire chore of maintaining cost basis information a pointless and distasteful imposition. We fear that without guidance the general public will increasingly disregard their responsibilities in regard to carryover basis.

"A home is like a reservoir equipped with a check valve: the valve permits influx but prevents outflow," wrote E. B. White. "Goods and chattels seek a man out; they find him even though his guard is up . . . Someone dies, and a little trickle of indestructible keepsakes appears to swell the flood." The carryover basis provisions of the Internal Revenue Code now require that most Americans maintain full cost histories of the material accretions of their lifetimes. Antiques and heirlooms, farm animals and artifacts, paintings, wedding gifts, boats, homesteads—all may be reached by carryover basis whether or not expert help is hired, whether or not an estate tax return is required.

INSTRUCTIONS—TANGIBLE PERSONAL PROPERTY

General. Examples of tangible personal property are:

---

*Use a separate sheet for each separate item. Consult instructions on reverse side of this sheet.

Antiques, Paintings, Automobiles, Jewelry, Silverware, Yachts, Furs, Collections (Stamps, Coin), Books, China, Porcelain, Jade & Glass, Musical Instruments, Furniture, Cameras, Farm Machinery, and etc.

Line 1. Describe the specific items as fully as possible so that it may be identified without error. For example, note a diamond ring's setting and weight, the make and year of a sports car, or the painter, title and provenance of a landscape.

Line 2. Give the exact date of acquisition if known. Otherwise list the approximate date as best as can be determined.

Line 3. A rough estimate will suffice.

Line 4. Supporting documents) such as purchase slips, copies of applicable schedules from estate or gift tax return, etc.) should be attached if they are available or if they can be obtained without undue difficulty.

Line 5. Use this section to provide any other information you think would be helpful. If you have made improvements to your property, for example (perhaps a new galley on your boat or the like) please note the date, cost and similar information in this space. Or if you have, for income purposes, depreciated a tractor used on your farm, note the details here.

   Who provided funds (and in what amounts) for improvements described in 6(a) above _____ and 6(b) above _____
8. Notes and Comments:

INSTRUCTIONS—REAL ESTATE—RESIDENTIAL OR RECREATIONAL

Line 1. Describe the parcel with sufficient detail so that it may be identified without error. Give brief description of house and outbuildings, if any. Include condominium property, but for stock in cooperative apartments, use the separate special form.

Line 2. Give the exact date of acquisition which will usually be the date shown in the deed or deeds.

Line 3. A rough estimate will suffice.

Line 5. Supporting documents (such as closing statement provided by attorney who handled transaction, copy of deed, copy of Note and Mortgage, copy of applicable schedule from estate or gift tax return, etc.) should be attached if they are available or if they can be obtained without undue difficulty. Full information is especially necessary in the case of a residence which, for income tax purposes, was exchanged for a prior one.

Line 6. Supporting documents (such as bills of contractors) should be attached if they are available or if they can be obtained without undue difficulty.

Line 7. If the property is held jointly, a complete history will be necessary of the source of funds used for the initial purchase, for any subsequent payments on account of the mortgage indebtedness and for the cost of subsequent improvements. Supporting documents (such as cancelled checks) should be attached. (If the property is held in partnership, use the form designated "Partnership Interests").

Line 8. Use this line to note any information you think might be helpful or pertinent.

* Use a separate sheet for each parcel. Consult instructions on the attached sheet.

12. Notes and Comments:

INSTRUCTIONS—REAL ESTATE-BUSINESS OR RENTAL PROPERTY

Line 1. Describe the property in enough detail so that it many be identified without error. Briefly describe the building and location. (Do not list stock in a cooperative apartment; there is a special form for that Do not list partnership property; there's another form for that).

Line 2. Give the exact date of acquisition.

Line 3. A rough estimate will suffice.

Line 4. If the property was not always used for rental or business purposes, please indicate when it was converted to such use.

Line 5. If part of the property is utilized for personal use (e.g. a vacation home sometimes used for yourself or your family, or a building used partially as your residence) please show the proportion of personal use as a percentage (or other clear allocation).

Line 6. How much is outstanding on the mortgage, if there is one? You may not be personally obligated for some or all of the mortgage because "recourse" may only be against the property itself. Please indicate, therefore, the amount of personal liability.

Line 7. Supporting documents (such as copies of closing statements, deed, Note and Mortgage, applicable schedules from estate or gift tax returns, etc.) should be attached if they are easily available.

Line 8. Supporting documents should be attached if they are easily available.

Line 9. The tax law provides for various adjustments, which should be summarized here, that directly affect the tax basis of your property. For example, depreciation may be taken by a variety of methods, such as straight-line, double-declining balance, etc. If an accountant's statement is readily available it may be attached, rather than going to excessive effort to answer this important question.

Line 10. If the property is held jointly, a complete history will be necessary regarding the source of funds used for the initial purchase, for any subsequent payments on account of the mortgage indebtedness and for the cost of subsequent improvements. Supporting documents (e.g. cancelled checks) should be attached. If the property is held in partnership, please use the special form so designated.

Line 11. This form is designed to elicit only a summary regarding business or rental property. If more information is required, whom may we get it from?

Line 12. Use this line to note any information you think might be helpful or pertinent.

*Use a separate sheet for each parcel. Consult instructions on attached sheet.

   -- "Exchange" for prior residence
7. Improvements made since acquisition:
   (a) Date: _____ Nature: _____ Cost: _____
8. Ownership Satus:
   -- Individually or
   -- Jointly. Exact form title: _____

* Use a separate sheet for each apartment. Consult instructions on attached sheet.

If purchased, who provided funds (and in what amounts) for (a) initial payment: _____ and (b) subsequent payments of principal due on mortgage, if any: _____ Who provided funds (and in what amounts) for improvements described in 7 above _____

9. Notes and Comments:

INSTRUCTIONS—STOCK IN COOPERATIVE APARTMENT

Line 1. Describe the apartment, with complete address, so that it may be identified without error. Do not use this form for a condominium; use either the form for residential real estate or the form for business real estate for condominium property (which is a form of direct ownership in realty, unlike a coop).

Line 2. How many shares do you own in the cooperative and what restrictions are there on the sale of your shares?

Line 3. Give the exact date you bought, by way of purchase of shares, this apartment.

Line 4. A rough estimate, perhaps based on recent sales of similar apartments in your building, will suffice.

Line 5. Complete this line only if you personally financed the purchase of stock in the cooperative. Do not include the mortgage borrowing of the cooperative itself.

Line 6. Supporting documents (such as copies of closing statements or applicable schedules from estate or gift tax returns, etc.) should be attached if they are easily available.

Line 7. Supporting documents regarding structural improvements should be attached if easily available. Expenses for upkeep should *not* be included.

Line 8. If the stock in the coop is held jointly, a complete history will be necessary regarding the source of funds used for the initial purchase, for any subsequent payments on account of the financing and for the cost of any later improvements. Supporting documents (e.g. cancelled checks) should be attached.

Line 9. Use this line to note any information you think might be helpful or pertinent.

   __ Individually or
   __ Jointly. Exact form of title: _____ If purchased, who provided funds (and in what amounts): _____
10. Notes and Comments:

---

* Use a separate sheet for each security. Consult instructions on attached sheet.

INSTRUCTIONS—NON-MARKETABLE SECURITIES

Line 1. Please note that "non-marketable" refers to the lack of a regular marketplace for the security and doesn't have regard to the likelihood or prospects for sale. Most securities may be classified as either "debt" (bonds, notes, personal loans, etc.) or "equity" (common or preferred shares) but there may be other types of securities (such as rights to purchase more shares). Do not use this form for stock in cooperative apartments: there's another form for that. Nor should you use it for partnership interests; there's still another form for those interests.

Line 2. List here the name of the corporation, individual, partnership or other entity who, for example, issued the stock or bond or signed the note.

Line 3. Describe the security (and, if appropriate, a bit about the circumstances of its issuance), as clearly as possible.

Line 5. Give the exact date of acquisition.

Line 6. Unless you have exact knowledge of the present value, an estimate will suffice.

Line 7. Supporting documents (such as copies of applicable schedules from estate or gift tax returns, corporate reorganization plans, etc.) should be attached if they are readily available.

Line 8. There are often, in case of untraded securities, restrictions on sale or transferability. If this is the case, please give details.

Line 9. If the security is held jointly a complete history will be necessary regarding the source of funds for the purchase or loan. Supporting documents, if any, should be attached.

Line 10. Use this line to note any information you think might be helpful or pertinent.

7. Partnership Debts: $_____ as of (Date) _____
8. Buy-Sell Arrangements? (If so, give details) _____
9. Name and address of party to contact for details: _____
10. Notes and Comments:

INSTRUCTIONS—PARTNERSHIP INTERESTS

Line 1. Please give the formal name and complete address of your partnership. Use this form for any partnership of which you are a member, including a professional partnership, business partnership or a tax-oriented partnership, whether or not your personal efforts are required in its business.

Line 3. In a general business partnership, all members are considered "general partners." But another form of partnership—a limited partnership—may have one or more general partners who operate the business and are responsible fully for it, and also any number of "limited partners," who may not be liable for the debts of the group beyond funds contributed to it. Please indicate your category as a partner, and give the name and addresses of all partners if you are a general partner and, if you are a limited partner, the name and address of your operating general partner.

Line 4. Please give the amount of borrowing and cash investment so that your basis in the partnership may be determined.

Line 5. An estimate of current value will suffice.

Line 6. An estimate of receivables will suffice.

Line 7. An estimate of current debts not included in line 4 above will suffice.

Line 8. Many business partnership agreements contain provision for partners to buy the entire interests of others under given circumstances. If your partnership interest is subject to such an agreement, full details will be necessary.

Line 9. This form is designed to elicit only summary information regarding your partnership. If more information is required, from whom may we get it?

Line 10. Use this line to note any information you think might be helpful or pertinent.

---

* Use a separate sheet for each partnership. Consult instructions on reverse side of this form.

15. Notes and Comments:

INSTRUCTIONS—OIL, GAS AND MINERAL INTERESTS

Line 1. Please describe the exact kind of property. If the interest is held in a partnership, as drilling ventures for example often are, please use the form designed to record the cost basis in partnerships.

Line 2. Please locate the property as accurately as possible, including county, "block" number and the like.

Line 3. Interests and sharing arrangements may vary widely. For example, you may own a one-eighth working interest, a participation, an overriding royalty, a carried interest, a net interest in production payments or any other type of interest peculiar to such property. Please give as much information as you can.

---

*Use a separate sheet for each interest. Consult instructions on attached sheet.

Line 4. Others who share interests in the same property may include, for example, a lessor, an operator with a working interest, or diverse other parties.

Line 5. Please give exact date acquired.

Line 6. Note the estimated annual yield in dollars, not barrels, tons or cubic feet.

Line 7. Indicate estimated reserves in units (e.g. barrels, tons, or cubic feet).

Line 8. Note the cash amount invested as of the indicated date, including additional cash invested for "calls" beyond the original investment.

Line 9. Often a lender has "recourse" for satisfaction of his loan against the property rather than against the borrower directly. Please indicate, if this is the case, the amount of such non-recourse borrowing outstanding.

Line 10. Show here financing other than that indicated on line 9 above.

Line 11. How much depletion was claimed in the most recent year and by what method, for tax purposes.

Line 12. Indicate, if by purchase, the full terms including any obligations to meet "calls." Supporting documents should be attached if they are available or can be obtained. For example, copies of applicable schedules from estate or gift tax returns would be helpful.

Line 13. Who actually does the drilling or mining and is able to supply further information, if needed?

Line 14. If the property is held jointly, a full history is necessary regarding contribution of funds and subsequent payments. Supporting documents should be attached.

Line 15. Please note any further informaiton which might be helpful. Income tax matters may be noted here. For example, total income from all oil or gas properties may be required to accurately gauge depletion, or intanglible drilling costs may be pertinent.

5. Notes and Comments:

INSTRUCTIONS—INTANGIBLE PROPERTY OTHER THAN SECURITIES

Line 1. Identify the asset or rights as clearly as possible so that it may be identified without error.

Line 2. Give the exact date acquired. If a patent or copyright has been renewed, please note the last renewal date, as well as the original date.

Line 3. An estimate will suffice. It would be helpful, in arriving at a value, to indicate current annual income generated by the asset.

Line 4. Please give as much detail as possible concerning acquisition of this asset. Attach available supporting data (copies of applicable schedules from estate or gift tax returns, or canceled checks, for example). Full financing information should be noted.

Line 5. Use this line to note any information you think might be helpful or pertinent.

*Use a separate sheet for each separate item. Consult instructions on reverse side of this sheet.

"HOLOCAUST" SCENES RECALL NEED FOR GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, a few weeks ago, the program "Holocaust" was aired on television and was watched by over 100 million Americans. This gripping tale showed how horrible a crime genocide truly is, and certainly reinforced my conviction that this country should do everything in its power to insure that it never occurs again.

One scene which particularly impressed me was the recounting of the revolt by the Jews in the Warsaw ghetto. Those who saw the show will certainly recall that hundreds of thousands of Jews were shipped to Warsaw, and were forced to live in isolation and poverty. As the antisemitic German activities became more intense, thousands of Jews were shipped from the Warsaw ghetto to one of the German death camps to be exterminated.

The Weiss family, the principal Jewish family in "Holocaust" followed such a path. From their home in Germany, they were forced to go to Poland and live in Warsaw, and it was from Warsaw that the two parents were sent to meet their death in Auschwitz.

Those who were not shipped from Warsaw, though, were finally able to organize some resistence to the Nazi hoodlums. With homemade weapons and weapons which they had managed to smuggle into the ghetto, they held out against the well armed Nazis in a revolt which lasted for several weeks.

When the Nazis did finally force those who had led the revolt to surrender, they carried out a murderous revenge against the revolutionaries. In the film itself, many Jews who had surrendered where lined up against a wall, and all of them, including women and children, were gunned down by a firing squad.

I would like to mention, too, Mr. President, that services were held in New York last Sunday to commemorate the Warsaw revolt and the 6 million Jews who lost their lives during the holocaust. The services were attended by New York Mayor Koch and Israeli Prime Minister Begin, both of whom delivered powerful speeches on the horrors of the genocide carried out by the Nazis.

As we remember the Warsaw revolt, and as we remember the 6 million Jews who were killed during World War II, let us also remember that the Genocide Convention, a treaty which would make genocide an international crime, is still pending before the Senate. The Senate has yet to act on this treaty, even though President Truman signed the treaty 30 years ago. I urge the Senate to ratify the Genocide Convention as soon as possible.

THE GRANTSMAN

Mr. PROXMIRE. Mr. President, last month I awarded my "Golden Fleece" to the National Institute for Mental Health for funding a study of behavior and social relationships in a Peruvian house of prostitution. This study was part of a $97,000 grant which paid for an 18-month field trip to Peru by a researcher and his associate. Ironically, the researcher, Dr. Pierre L. van den Berghe, had just written a book on how to win at academic and grantsmanship games.

In an article in Sunday's Washington Post on the often "sleazy" world of the grantsman, Lon Tuck obtained fascinating quotes from Dr. van den Berghe and his fellow seekers of Federal grant dollars.

It appears that the grantsman, whether in the field of opera, ballet or even the sociology of Peruvian brothels spends much of his waking hours in the enriching pursuit of governmental or private grants. The "taxing" job of securing these funds is only relieved by the occasional periods of time in which the grantsman is actually performing the work paid for by the grants. However, since the grantsman is often an empire builder as well, he must constantly seek to expand his domain. Therefore, he must quickly turn back to the task of obtaining still more and larger grants. Unfortunately for the American taxpayer, the chances of the grantsman achieving his own "manifest destiny" is often enhanced by his previous successes at the grantsmanship game because the funding agencies view previous success at receiving taxpayers' dollars as a good reason for offering still more funds to these "entrepreneurs."

It is clear from this article that we need to improve and increase our reviews of Federal grants in order to stop the run on the Federal Treasury by these professional grants men and women.

Mr. President, I ask unanimous consent that the article "Granting Your Wish" be printed in full in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GRANTING YOUR WISH

(By Lon Tuck)

In 1956 a 35-year-old man named Joseph Papp walked into the Doris Duke Foundation looking for his first grant. He had only two weapons at his disposal. One was a clipping from The New York Times' Brooks Atkinson lavishing praise upon an outdoor performance by something called the New York Shakespeare Festival. The other weapon, he says was chuzpah.

The Duke Foundation had never before granted money to theater, and grants did not then play their present central role in subsidizing culture. But Papp got $10,000, and "for the first time I was able to pay my actors—$25 a week. One of them was Colleen Dewhurst."

Two years later, he started trying to crack the Ford Foundation—and found he couldn't even get his chuzpah in the door. For 15 years, in fact, the foundation held him at arm's length while Papp pummeled it with combination punches. When Ford turned down his grant applications, he accused the foundation of "weasel-worderness"—and drew outraged responses from George Bundy about Papp's "hot temper" and his "personal attack" on Ford Foundation officers. In 1973, Ford finally weakened, and coughed up $1.5 million to help the indefatigable grantsman take on what was to be a losing battle with the troubled theaters of Lincoln Center.

LEARNING THE ROPES

Perhaps by instinct, perhaps by the exigencies of crisis, Joseph Papp learned the ropes of 20th-century grantsmanship—the art and science of talking agencies, foundations and well-heeled well-wishers into underwriting your bright ideas—before most American performing arts managers even knew the ropes had been strung up. His New York Shakespeare Festival, once a shoestring operation, is now one of the giants of the American stage. It grossed $30 million last year and employs 300 persons.

Today's grantsman has it easier—he can even take a course in technique, like the symposiums of the Grantsmanship Center, for a mere $325. He can also rest assured there is much more funding to be had. But strong motivation, plus skill at preparing a persuasive case, is now of even greater importance.

More than a billion dollars a year now go to cultural grants, and a billion dollars means hard competition. The federal arts and humanities endowments alone directly invest about $215 million. Cultural grants show up in the budgets of other agencies, from the Fulbright scholarships to the job programs for artists of the Department of Health, Education, and Welfare. State and local governments contribute considerable amounts independently and on a matching basis. Corporate cultural grants alone were estimated last year to be $221 million, much of it matching the government and the foundations.

The style of today's Compleat Grantsman varies with the situation. Slick management and persuasiveness helped Anthony Bliss stave off disaster for the ailing Metropolitan Opera. "Fund-raising has become as hard work as the artistic side," says Bliss. And that is also the style of PepsiCo chairman Don Kendall, now trying to bail out American Ballet Theatre.

But most grant-seekers lack such easy entree into high places. Instead, they spend countless hours waiting outside offices and knocking on doors, many of which never open. For people like Steve Stern, of the Otrabanda theater players, or Bill Ferris of the Center for Southern Folklore, personal determination is the best weapon. "The key to grantsmanship is to refuse to give up," observes the mild-mannered Ferris.

And you have to count on the pains and frustrations of losing at least as often as you win. Papp still fumes about his relations with the Ford Foundation: "I've never met Mac Bundy, but I guess that if I had I would have punched him in the nose."

You have to be in the right place at the right time, as Pierre van den Berghe, the University of Washington sociologist, well knows. His federally financed research into a Peruvian Indian brothel drew the ire recently of Sen. William Proxmire (D-Wis.). Van den Berghe says he didn't mind the publicity. What he minds is that his book, "Academic Grantsmanship," is currently out of print.

THEATER ON THE RAFT

When the first request for a National Arts Endowment theater grant for the Otrabanda Company plopped on a desk here in 1971, it probably wasn't taken too seriously. After all, the idea of aiding a group of players who wanted to float down the Ohio and the Mississippi all summer and set up a stage in small riverbank towns for evening performances suggested a boondoggle, and brought to mind the plot of "I Pagliacci."

Furthermore, Steve Stern, who grew up in Montgomery County, and his friends were students at Antioch College, hardly a citadel of conservatism in those days. Would the riverside audiences be subjected to radical tracts?

So there on the desk the application sat. But Stern was, and is, a serious grantsman and he recalled recently from Otrabanda's New Orleans office how they finally got attention to that crucial first grant.

"Later that year, we met some people from the Smithsonian at a theater workshop and they really liked our work. So they invited us to Washington for a one-night stand.

"They saw to it that some people from the endowment were there. They were impressed enough that they called us over the next day and went over the application with us. They said we had filled out the form wrong and helped us redraft it. They said that because we had no accounting skills we had misjudged the scope of the project and asked for too little money. Instead of $10,000 we should ask for $15,000. We did, and the grant came through."

That launched the first of six river seasons by Otrabanda. In 1974, for instance, they brought their original revue to 28 towns—places like Cape Girardeau, or Friar's Point or Vicksburg. More recently they have performed period dramas that might have been done under the same circumstances 100 years ago.

Stern and his company are even more dependent on grants than large performing arts institutions. Grants make up 60 percent of the budget. "I have to hustle," he says.

One enterprising success came last year, when the company received the National Science Foundation's first theater grant. It was to write and perform a play on the philosophy of science that Otrabanda has since staged in science museums from coast to coast.

Stern says some members of state arts councils along their river course still betray suspicion and doubt about what they are up to.

They once seemed assured of a grant from the Ohio Arts Council until the day of the actual vote. A favorable review of their performance in that morning's paper made mention of an earlier Otrabanda work in which "people make love in supermarket baskets."

"That offended one man on the council," recalls Stern, "and it did us in."

ANTHONY ADDISON BLISS

Anthony Addison Bliss, 64, executive director of the Metropolitan Opera, is a product of Groton, Harvard and the University of Virginia Law School. He is the grandson of Cornelius N. Bliss, McKinley's Secretary of the Interior, and his aunt, Lizzie P. Bliss, was an organizer of the Museum of Modern Art, to which she left her collection. For most of his career he practiced at the lordly New York firm of Milbank, Tweed, Hadley and McCloy, while playing active roles on the boards of institutions like the Joffrey Ballet and the Metropolitan Opera.

Bliss believes the key to grantsmanship on a major scale is "being able to get your foot in the doors of potential donors and presenting your case, eyeball to eyeball. It requires telling the truth and telling it in full detail."

And because his family and professional background get him in where others might not get an audience, and because his career skills prepared him well to present the Met's case, it was to Anthony Bliss that the Metropolitan turned in November 1974 when it appeared the company might go under. The feeling was that if anybody could obtain the necessary funds, Bliss could, and he certainly has. This past season the Met actually enjoyed its first surplus in years.

In terms of dollars, Bliss, who is the chief administrator as well as the chief fundraiser, probably has to raise more money every year than any other single official in the preforming arts. The Met is the most expensive single such organization, with a $35 million budget last year. It also has the biggest deficit, $13.2 million.

"In addition to what I do", recounts Bliss, "the Mets president, Frank Taplin, spends three full days of his week on it, even though his job is unsalaried. We're just lucky he can afford it. Also it has to be a principal preoccupation of—and this varies—from at least three to, ideally, six of our board members."

To underline his point, Bliss reviewed his personal schedule for the previous 24 hours: He and Taplin both went to dinner party the evening before attended by several potential donors; they both spent the morning at the offices of "a major foundation" discussing a prospective grant; joined by another Met official, they lunched with the chief executive of "one of the leading banks" to discuss the progress of yet another grant ("These things usually take at least three months to work out"); Taplin was on the phone in the afternoon with other foundations, and Bliss held a two-hour meeting in his office in which staff members joined him and officials of a corporation "from which we are soliciting an important grant. We were trying to explain to them how it would be in their interests from a public relations point of view."

An example of a major grant in the Met's eyes was the landmark National Endowment for the Arts challenge grant awarded last year "to raise funds for increased operating costs and to launch a five-year endowment campaign."

Challenge grants must be met three times over from other sources and are meant to stabilize an organization's managerial and financial foundations. The man who administrated the challenge grants that first year, John Spencer, recalls that Bliss' presentation was a model of what such things should be. Bliss was the only grantsman to get for his company the maximum allowable sum, $1.5 million. And even though challenge grants are supposed to be one-time-only affairs, the aggressive Met is back this year, trying for another one—just in case.

Says one envious colleague, "Bliss is running the smoothest shop in the business."

12 YEARS EXPERIENCE

Tom Naratil Jr., of Newburgh, N.Y., was actually underage when he applied for his Humanities Endowment grant. He was only 12, and the lower limit on the Youth grant program is 13. But Tom must have sensed that the wheels of government move slowly, so that by the time he got an answer he would be 13.

Mary Elin Carnes, his French teacher at Newburgh Free Academy, recalls returning from Washington from a briefing on the Youth grants and pressing her 150 students to get involved. "Tom, who is probably the most promising student I have ever taught, was the only one to take the initiative."

Newburgh is a treasure trove of late Victorian architecture and Tom decided that, considering the rate at which old buildings were coming down, a photographic record of old Newburgh was in order. Using $810 from the endowment and a Canon FTB with an F1.8 lens, he spent much of the summer making over 1,000 shots of the city's architectural heritage.

The subsequent report and slide show (with a taped narration) provides a record for Newburgh's citizens of what was left of Victorian Newburgh, and an impetus to stop tearing more of it down.

Tom is harder to catch on the phone than many of the big mogols of grantsmanship—what with the track team and all. He's now 16, and when he talks about the future, the most important thing on his mind is that he wants to go to Harvard.

Having been the youngest grantee in the history of the National Endowment for the Humanities shouldn't hurt his chances.

BETTER AT DANCING

American Ballet Theatre is better at dancing than it is at business. It may come as a surprise that the company that has brought Baryshnikov, Nureyev, Makarova, Kirkland and Gregory regularly to the Kennedy Center was turned down last year by the National Arts Endowment for a challenge grant because ABT's back office was in such disarray. No one quarreled that ABT is one of the world's preeminent dance companies. But, also, no one quarreled that its finances were a mess.

Losing the challenge grant put the fear of God into ABT's board, and a decision was made that emergency measures must be taken to insure that ABT get one this year (the new ones will be announced in late spring).

ABT needed a high-powered grantsman who had easy access to the sources of big money and who could pull the company's finances together fast. By June they had found their godfather in Donald Kendall, 57, the chairman and chief executive officer of PepsiCo Inc. and a director of such companies as Atlantic Richfield and Pan Am.

"I like the dance very much", recalls Kendall, "and somebody within my company heard about Ballet Theatre's problem and suggested I might want to get involved.

"At the time I got in I didn't realize the size of the problem. If I had I might not have done it. There was a real question of whether we could survive or not. $250,000 in unpaid bills were more than 90 days overdue and the company could not meet the payroll. The management side just was not up to the artistic side."

Kendall went to George Moore, former head of First National City Bank and a long time principal fund-raiser on the Met's board, and asked for help. Moore recommended hiring Herman Krawitz, a principal deputy in the days of Sir Rudolf Bing at the Met, as a consultant.

"Herman got to work. The Arthur Young company got the books straightened out. We got a cash flow going and made some projections so that we could show people where we were and where we were going. Then I started going to see my friends in the corporate world and told them Ballet Theatre had to be saved. My role was to get access to these people because I know them."

Even though Krawitz came in an outsider, he says his relations with longtime ABT directors Lucia Chase and Oliver Smith have been good. "Chase doesn't resist my pulling her along. I'm not after her job."

This year there are 353 groups seeking $103 million in challenge grants, with only $30 million to go around. But Kendall and Krawitz are optimistic that the grant will come through. "Then I'm going to phase down a bit," says Kendall. "This takes too damn much of my time."

SOUTHERN APPROACH

Bill Ferris of Memphis is the cofounder of a pioneering project called the Center for Southern Folklore. He assumes a quiet country boy manner that masks his quite considerable academic aptitude. But, in his way he is a grantsman on the order of a Papp or a Bliss. He certainly has their tenacity. He, however, lacks their access. "My greatest problem is to get my foot into the door," he says.

Ferris' project is devoted to preserving through films, tapes, records, photos the rich and disappearing folk culture of Mississippi.

His primary motivation is that of a "true believer." He gave up a promising career as an English literature scholar to devote himself to his bold venture in folk culture, one that at present is almost entirely dependent upon grants to finance its work and pay its 14-person staff.

"We are losing an incredible amount of our culture," he declares. "The generation we are losing now is the last one to have seen pre-industrial America. They have seen a great wrenching change, from the horse and buggy to the moon. And there ought to be records of what that experience was like for them."

The low-key Ferris is zealous in pursuit of grants and his record of success is outstanding—35 separate grants in six years, or about 50 percent of the ones he has sought. "You just have to write, and rewrite and resubmit," he says. Ferris' virtually exclusive dependence upon grants is unusual even for today, and thus his is an example of a project that would almost certainly have been impossible in the pregrant age. The most important of his grants is a $200,000 challenge grant from the National Endowment for the Humanities. It is designed to reduce the Folklore Center's dependence on grants and to set up a distribution system to libraries, schools and museums that will, he hopes, "let us make money."

Ferris has eased his problems of getting his foot in the door by setting up an advisory board with members ranging from Harvard psychiatrist Robert Coles to jazz musician B. B. King. But, for all that, he still is clearly his own best salesman.

For all of Bill Ferris' wide-eyed earnestness, though, there are others who approach grantsmanship more cunningly. Some have tried to make science of it, as with the numerous consulting firms that now constitute a small cottage industry. And some regard it as not so much a science as a game.

MAKE YOUR PH. D. PAY

One such person is Pierre van den Berghe of the University of Washington in Seattle. With the help of three assistants he produced a study of Indian life in an Andean village that included an article called "The Peruvian Brothel, a Sexual Dispensary and Social Arena." One of the results of a $97,000 grant from the National Institute for Mental Health, it was published in the Archives of Sexual Behavior last summer and excerpted in Playboy. Week before last Sen. Proxmire singled it out for his monthly Golden Fleece Award—a recognition of "the biggest, most ridiculous or most ironic waste of taxpayers' money." Comments van den Berghe, "At least we didn't get paid for the Playboy excerpts."

The NIMH bequest is van den Berghe's fifth in 17 years as a scholar, and he has distilled the lessons learned from these experiences in a volume called "Academic Grantsmanship," which is a "how to" guide to what van den Berghe calls "the art of scholarly mendacity." The subtitle is "How to Make a Ph. D. Pay."

His recommended practices are openly opportunistic. The first suggestion: "Never give the impression that you do not know precisely what you want to do and how you are going to do it. This often involves dishonesty because in the majority of cases you start a research project with only a general idea of what area you want to investigate and what methodology you want to use, and you have only a few hunches as to why you want to use it." Another suggestion: "A good budget must show two qualities: It must be both detailed and extravagant."

Van den Berghe sees the grants system as "often distasteful even when it is not dishonest." He says that the NIMH grant, however, was "absolutely straight because my plans and theirs coincided. I was urged to get it by the chairman of my department on the basis of inside information that the governing board would be receptive to what I wanted.

"I had to lie once, though, on a grant application to do work in South Africa. I was going to work on racial problems, but I had to apply for a grant for excavations because the government would never have let me in otherwise."

Given his criticisms, van den Berghe is asked if there isn't a better way to do it than grants. "I'm not so sure there is," he replies. "Any attempt to try to do it blindfolded is bound to fail."

"IT WILL CATCH ON . . ."

On reason Oleg Lobanov, 43, was chosen as managing director of the National Symphony Orchestra was that he's worked both sides of the grants fence, with six years at the Ford Foundation.

He is a pro at grantsmanship and one of his first big projects after coming here, the orchestra's $1 million challenge grant, sailed without a hitch.

He recalls countless grant applicants at the Ford Foundation who would arrive with ill-conceived proposals and say, in effect, "If you would only start it up, I know it will catch on and become self-sustaining."

That's not the way grantsmanship works. Says Lobanov, "The most important thing to remember is that nobody ever deserves a grant. It just doesn't work that way."

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Morning business is closed.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS TO 9:30 A.M. TOMORROW

Mr. PROXMIRE. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 9:30 a.m. tomorrow morning.

The motion was agreed to, and, at 5:53 p.m., the Senate recessed until tomorrow, May 3, 1978, at 9:30 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate May 2, 1978:

DEPARTMENT OF STATE

William B. Edmondson, of Nebraska, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of South Africa.

AGENCY FOR INTERNATIONAL DEVELOPMENT

David Bronheim, of the District of Columbia, to be an Assistant Administrator of the Agency for International Development.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

INFLATION AND TAX INDEXATION IN CANADA

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. CRANE. Mr. Speaker, there is a growing concern with the problem of inflation and rising taxes. We read and hear talk of a "tax revolt" throughout the United States. The Carter administration is offering us more inflation and more taxes.

I have sponsored a measure which would help ease the growing tax burden of Americans. The Cost of Living Adjustment Act would amend the Internal Revenue Code of 1954 to provide for automatic cost-of-living adjustments in the income tax rates. It would also index the amount of the standard, personal exemption, depreciation deduction, and rate of interest payable on certain obligations of the United States. The idea of indexing has been gaining more and more attention.

Economist Paul Craig Roberts wrote the following in a recent article ("Some Tax Myths: Who Pays What?" National Review, April 28, 1978):

> Indexing the tax structure (adjusting it to offset inflation) would prevent this deterioration that is occurring in the living standards of all Americans. One might think that this would make indexing an important issue in tax reform. Yet, it is not part of the Administration's proposals. Opponents of indexation have argued that inflation causes government's costs to rise, so that it also needs more revenues. However, the way it is now, the government's revenues don't simply rise by the amount of the inflation, they rise by 1.65 times the rate of inflation. A 10 percent rate of inflation means a 16.5 percent increase in revenues.

The Tax Foundation sponsored a conference here in Washington, D.C., on March 30, 1978, with one session devoted to indexation. One of the papers presented was by Carl Steiss of Price Waterhouse & Co. of Toronto, Canada, and an instructor at the University of Toronto. Mr. Steiss discussed the Canadian experience with a limited system of indexation—the indexing of the tax brackets. During a period of inflation, taxable income increases more rapidly than the inflation rate, because of the static nature of the quantum of those exemptions.

One interesting fact Mr. Steiss points out. In an intensive 4-year study of the tax system which resulted in a 2,700-page, five-volume report, the Carter Royal Commission on Taxation in 1966 recommended against the adoption of a system of automatically indexing of the tax system. Yet on February 14, 1973, the then Minister of Finance, John Turner, proposed a system of indexing which was adopted into law beginning in 1974. Mr. Steiss noted that the change in attitude on indexing occurred, because of "the tremendous rates of inflation we have experienced since the mid-1960's and the significant pressures this has placed on Government and Government thinking." Prior to this time personal income taxes were taking a higher and higher proportion of income from Canadians thus placing them in higher tax brackets without a corresponding increase in their real income. The problem became worse with the inflation of the 1970's as Canadians realized the effect of the "silent but annual tax increase" because of inflation. Mr. Steiss states the result:

> Indeed, many were clearly beginning to recognize that inflation itself was a form of taxation, that the government was obtaining a rising share of personal income coincident with inflation and that such an increase was being achieved in the absence of distasteful overt increases in nominal tax rates.

Mr. Steiss offers some interesting conclusions on that tax indexing program in Canada. It has been the taxpayers in the range of $15,000 who have benefitted the most from the percentage saving from indexing with the next greatest benefit going to taxpayers with income ranges from $15,000 to $20,000. Since almost 70 percent of Canadian taxpayers have assessed income ranging from $10,000 to $25,000, we find it is this group, not the very wealthy, who have received savings from indexing. It has reduced Government revenues; it has reduced the rate of growth of direct personal tax revenues to Government from inflation; it has aided to restrain some Government spending; and it has given an extra measure of control over taxes to the taxpayer and voter.

We should remember that indexing in Canada is limited to exemptions and tax rate brackets. A fully indexed economy in order to protect its citizens from the "silent tax increases" needs to consider indexing other aspects of the economy such as capital gains. We need to consider this important reform in the United States.

Mr. Steiss raises a number of key issues in his perceptive paper and I urge my colleagues to read and meditate on the message in "Indexation of Canada's Individual Income Tax System":

INDEXATION OF CANADA'S INDIVIDUAL INCOME TAX SYSTEM

(By C. F. Steiss)

I have been asked to provide a few observations on Canada's reaction to what I might refer to as the "silent tax increase". Perhaps I should open with a word about what I mean by this phraseology. Generally speaking, inflation causes taxable income to increase more rapidly than total real income due to the fact that taxable income is a calculated amount after allowing for certain exclusions and deductions. While some exclusions and deductions may increase at a rate commensurate with inflation, others, and notably the basic personal exemptions which account for almost 80% of all exemptions and deductions in Canada from individual income, do not. Consequently, in a period of inflation, taxable incomes rise more rapidly than the inflation rate due to the static nature of the quantum of those exemptions. Thus we have one element of the silent tax increase.

A second element is the progressive rate structure. An increase in the effective average rate with unchanged real taxable income yields higher real taxes. The only obvious way of avoiding this is to index the brackets. Assuming a taxpayer's various deductible expenses rise at an inflation rate, indexing of the brackets should generally mean that real tax liabilities will rise only where total income is rising more rapidly than the inflation rate. Where total income is rising less rapidly than that rate, real liabilities will actually fall.

On the evening of February 14, 1973, the then Minister of Finance, The Honorable John Turner proposed the introduction to the Canadian tax system of a "major innovation in tax philosophy and practice". In commenting on this proposal, the Minister expressed concern in respect of the rampant inflation phenomena in Canada and the impact such inflation has on a tax system based on a progressive rate schedule. The proposal, as presented, was subsequently implemented into law with effect from 1974. Many, myself included, regard this change to Canada's income tax laws as one of the two most important structural changes to the Canadian income tax system since World War II: The other being the taxation of capital gains and the many other substantive changes implemented by the 1971 tax reform bill.

Implementation of the proposal introduced the following basic system of indexation of Canada's individual tax system:

(a) The annual determination of a so-called "inflation factor" based upon the increase in Canada's Consumer Price Index in a defined immediately preceding 12 month period.

(b) Application of this inflation factor to the various principal exemptions available to individual taxpayers in Canada. Such principal exemptions prior to indexing, and therefore in 1973, included a $1,600 single status exemption, a $3,000 martial status exemption and individual dependency exemptions of upwards to $550 per dependant and, finally, and very importantly . . .

(c) Application of the inflation factor to the marginal tax rate brackets of the Canadian individual taxpayer.

The technical calculation of the cumulative inflation factor is determined as the ratio of the Consumer Price Index for the year ending September 30 of the relevant previous year divided by the Consumer Price Index for the year ending September 30, 1972. From a practical point of view the Minister announces the increase annually and soon after the September CPI statistic is available. The inflation factor is pragmatically expressed in terms of an annual adjustment to the prevailing exemption levels and tax rate brackets of the prior year.

For example, the legislative adjustment in respect of the 1978 personal exemptions and rate brackets was announced in October of 1977 and was determined by dividing the average CPI for the 12 months ended September 30, 1977 by the corresponding average for the preceding 12 month period ended September 30, 1976. Expressed in percentage terms, the major personal income tax exemptions and the tax bracket limits for 1978 were raised by 7.2 percent as compared with those that prevailed for 1977.

Why September 30? The selection of September as the extreme of each 12 month averaging period was based on the factual

circumstance that the month of September was simply the last possible month in a year that could be reflected in the calculation while still allowing the government time to print and distribute the withholding tax tables on a timely basis for the following taxation years, being the year for which the calculation is relevant.

Why a 12 month averaging period? The intent of the government was to extend the period so as to minimize the impact of unusual events or circumstances which might initiate an undue influence on the calculation of an inflation factor based on a shorter period.

Interestingly enough, the law itself does not contemplate a reduction in exemptions and/or a narrowing of the marginal tax rate brackets. Indeed, where the inflation factor for a particular year is less than that of the preceding year, the preceding year's factor will be deemend to be operative: In other words, the exemptions and tax rate brackets will not be reduced from that of the preceding year. I mention this point merely for your general interest since, with the rates of inflation to date in Canada, the matter has certainly not been in issue from the time the scheme was first introduced.

The inflation factor applied to the marginal rate brackets and exemptions has broadened the brackets and increased the exemptions on an annual basis by some 6.6% for 1974, 10.1% for 1975, 11.3% for 1976, 8.6% for 1977 and 7% for 1978. By 1978, the compound effect of indexing since its inception amounts to a hefty 52.1%. Introduction of indexing in 1974 meant the dropping of some $175,000 from the tax rolls and another $225,000 in 1975 after which the government stopped counting. Estimated cumulative federal government revenues lost through indexing through 1978 are some $4 billion.

Let's take a look at the rates. In the absence of indexing, our top marginal rate would cut in at taxable income of $60,000. I hasten to add that that top rate is dependent upon the province of residence of the taxpayer and may vary from a low of approximately 60% to a high of around 68%. For 1978, and strictly as a result of indexing, the top marginal rate does not cut in until taxable income of some $91,260 is reached.

What about the exemptions? The married taxpayer with a wholly dependent spouse and two dependent children would, in the absence of indexing, qualify for exemptions of some $3,600. Application of indexing to these exemptions entitles him to deductions of some $5,480 in 1978.

A single pensioner would have about $4,000 in 1978 exemptions versus $2,600 without indexing.

Indexing represented a very major shift in historical attitudes in Canada as to inflation and taxes. Perhaps one of the most major studies of any developed tax system was that of the Carter Royal Commission on Taxation. That Commission spent some four years of intensive study of all aspects of our then existing tax structure and issued its massive 2,700 page, five volume report, in 1966. The Commission considered the merits of indexing and concluded that "the tax structure should generally not be adjusted automatically to take into account changes in the general level of prices. To develop a tax system that taxed only increases in 'real' purchasing power would irreparably damage the built-in stability of the system".

Why the change in attitude?

Obviously, a part of the change must be explained by the tremendous rates of inflation we have experienced since the mid-1960's and the significant pressures this has placed on government and government thinking. Indeed, in introducing their remarks and negative conclusions with respect to indexing a tax system, the Carter Commission made the following statement:

"Assuming that the Consumer Price Index continues to rise at an average rate of 1.5% to 2% a year, what could and should be done?"

The fact that the level of inflation from 1952 through 1965 averaged only about 1.4% a year and only reached its highest level of 3.2% in 1957 may have contributed to their conclusion that indexing was not of paramount importance. Since 1965 the rate of inflation escalated significantly reaching, 4.8% in 1972 and 9.1% in 1973 when indexing was introduced. Furthermore, inflation has simply galloped along since that date. Expressing Canada's Consumer Price Index factor in terms of 1971 equals 100, said factor at the end of January, 1978 was some 167.8.

Prior to the introduction of indexing to Canada's income tax laws in 1974, personal income taxes were taking a higher and higher proportion of the real incomes of Canadians. Each year, the real value of personal exemptions was becoming less and less and more and more Canadians were finding themselves thrust into higher tax brackets without a compensating increase in their real income. While obviously not as exaggerated in the late 1960's, the impact was still there but I would think it fair to say the majority of Canadian taxpayers were unaware of this "silent but annual tax increase". With the advent of rampant inflation in the early 1970's, there were signs in Canada that the silence of the increase was being disturbed and that Canadian taxpayers were becoming more and more aware of the interaction of inflation and taxes. Indeed, many were clearly beginning to recognize that inflation itself was a form of taxation, that the government was obtaining a rising share of personal income coincident with inflation and that such an increase was being achieved in the absence of distasteful overt increases in nominal tax rates.

Anyone concerned with basic social policy has to be concerned about the impact of inflation. As you rise up the income scale, Canada's higher tax brackets widen considerably and increasingly insulate taxpayers from ravages of inflation on real tax rates. In other words, the tax increases resulting from inflation are highest not at incomes where the marginal rates are highest but rather at those income levels where marginal tax rates increase most rapidly thereby placing the burden more squarely on middle and low income earners.

What taxpayer has benefited the greatest from indexing? Notwithstanding my comments a moment ago about the $60,000 marginal rate taxpayer, this is not the taxpayer category which has benefited the most. A computer simulation model study recently conducted would indicate that the taxpayer with assessed income in the $15,000 range enjoys the most significant percentage savings from indexing. Indeed, about 27% of the total tax savings enjoyed from indexing belongs to this taxpayer category. The next greatest saving goes to income ranges of from $15,000 to $20,000. Taxpayers with assessed income from $10,000 to $25,000 account for close to 70% of the total federal tax savings enjoyed through indexing of the Canadian tax system.

What about revenue lost through indexing? There is no doubt that indexing "COSTS"! For the 1978 taxation year, federal tax reductions for taxpayers at all income levels will total some $850 million as a result of application of the inflation factor applicable for that year or roughly 6% of budgetary revenues. All of the provinces of Canada other than Quebec have tax collection agreements with the federal government in respect of individual income taxes. Those provinces also of course experience reduction in revenues through indexing. In very early estimates prepared by the Province of Ontario, it was estimated that by 1980 the indexing revenue loss to the federal government would range from about 18% at sustained 5% inflation to about 24% at sustained 8% inflation. Reduction in Ontario revenues indicated the same pattern. There is no doubt that indexing significantly reduces the rate of growth of direct personal tax revenues over the long term unless such reductions are offset by explicit increases in tax rate. Some would say, and I would agree, that out of this observation flows a still further advantage of indexing: Namely, indexing increases parliamentary and/or tax-taxpayer/voter control over tax rates.

Will indexing in Canada survive? Costs of government are rising rapidly while tax revenues and the real wealth of the nation on which they are based are somewhat stalled. To continue indexing may continue to increase an existing budgetary deficit and to raise taxes in isolation is not only politically unpopular but is also inconceivable with the fragile Canadian economy of today. One thought is that the government may be tempted to ease its predicament by changing the method of calculation of the magic inflation factor to produce a smaller factor but this itself would be unpopular and could become a matter of substantive controversy.

While the reduction in revenue growth potential of the personal income tax can perhaps be absorbed in the case of the federal government for some years due to its surplus financial capacity, in the case of the provinces, a substantial deterioration takes place in their long run financial position. Pressure signs are starting to show and the matter could become a significant issue in the next while. Perhaps the chief hope of the government is that inflationary rates will abate and the impact of indexing diminish.

Has the government of Canada accepted indexing as a logical and indeed necessary part of the Canadian tax system? The answer must be a qualified no! Certainly extension of indexing to exemptions and the personal tax rate schedule was a major innovation. But, if one accepts the principal of indexing, is there not some logic to extension of its application to most statutory deductions and absolute dollar income inclusions under our Income Tax Act. For example, the Canadian Income Tax Act prescribes various deductions to retirement plans including, for example, a maximum deduction to a pension plan. The quantum of this deduction has increased over the past several years but such increase has not been tied in to indexing. In 1971 the government recognized that employees may have expenses and allowed an arbitrary maximum deduction of $150 in recognition of employment expenses. In 1977 the Minister of Finance recognized that inflation had eroded the value of that deduction and arbitrarily increased it to $250 for 1977 and subsequent years. While the increase was welcome, one wonders why in 1973 the indexing scheme was not applied to this and many other deductions under the Income Tax Act. Perhaps another outstanding example must be capital gains. The only response of the Canadian government to date with respect to the impact inflation has on people's savings has been arbitrary deductions of $1,000 of investment income, and certain private pension income. Again indexing has been ignored.

Accordingly, the equity argument in favour of inflation-proofing the personal tax rate structure has not been fully accepted or, perhaps more appropriately, reflected. Only time will tell but I advance my own cautious opinion that for the time being—

"They've gone about as far as they can go!" ●

ECONOMIC FACTS ABOUT ALASKAN LANDS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. OTTINGER. Mr. Speaker, the facts do not support the contention that H.R. 39, the Alaska National Interest Lands Conservation Act, is a "lockup" bill.

The Interior Committee report on H.R. 39 gives the following statistics on the disposition of the 375 million acres of lands in Alaska if the bill passes as reported:

Forty percent (149 million acres) of all the land in Alaska will be or will become the property of the State, native corporations or private land owners.

Twenty-six percent (98 million acres) of all the land in Alaska will be Federal land open to mineral entry, logging, and other multiple uses.

Sixty-six percent (248 million acres, the sum of the above) of all land in Alaska will be open to a wide variety of uses, unaffected by H.R. 39.

Thirty-four percent (127 million acres) of all the land in Alaska will be in one of the conservation system units either already existing or designated by the bill.

Seventy percent of the lands with metallic mineral potential in Alaska will be outside conservation system units.

Eighty percent of all the lands in Alaska will be open to possible development.

Ninety percent of all the land in Alaska could be open to sport hunting.

One hundred percent of all high potential oil and gas lands in Alaska will be open to possible development.

One hundred percent of all Federal lands in Alaska will be open to mineral assessment. including core drilling for geologic information by the Department of the Interior.

Mr. Speaker, one of the best summaries of the economic aspects of the Alaskan public lands issue that I have found to date appeared in the Anchorage Daily News in an article by Mr. Benjamin A. Shaine. Mr. Shaine's conclusions are based on a consideration of studies by the State of Alaska, the Federal-State Land Use Planning Commission for Alaska, work done for the office of technology assessment, and other studies. Mr. Shaine is a professional resource planner in Anchorage, Alaska, who has conducted research on the National Interest Lands for the past 7 years for the University of California and other institutions.

I am including the full text of his article in the Anchorage Daily News for the benefit of my colleagues:

[From the Anchorage Daily News, Jan. 4, 1978]

SORTING OUT OF D-2 FACTS, ECONOMICS

(By Benjamin A. Shaine)

Probably most of us have three concerns about land in Alaska:

As Alaskans, we feel a particular kinship to nature and the wilderness. At the same time, most of us depend on resource management or development activities for a living. Third, along with other citizens of the United States we worry about supplies of oil and other materials we use. We know that commodities from our state are becoming nationally important. Given these concerns, how should we feel about the d-2 proposals for parks, refuges and wilderness areas?

Our newspapers and radio have spread the word that environmentalist d-2 proposals threaten our economic well-being. Oil companies, for example, have printed large ads in The Daily News and other papers implying that federal withdrawals will lock up vast energy, mineral, and agricultural resources. Are they right?

Fortunately, we can look at several new reports on the subject. The two best are by the Federal-State Land Use Planning Commission and by the State of Alaska. Both studies are objective; neither of these institutions is a promoter of the larger d-2 lands proposals. The commission study by Dr. Bradford Tuck is carefully researched, summarizing federal Bureau of Mines analyses, University of Alaska publications, and other sources. The state study was prepared to help in locating valuable lands for state selection—the d-2 analysis is only a byproduct.

Several facts stand out when we read these reports:

First, Alaska is becoming wealthy, and the state's wealth is coming from oil. Prudhoe Bay and most of the potential onshore oil lands are owned by the State or by the private Native corporations. Most of the offshore petroleum is or will be leased by the federal government to private companies. Even the Udall and Carter d-2 proposals would restrict development of less than a fifth of the onshore resources. They would have almost no impact on the offshore areas.

New jobs and economic growth come primarily from state spending of tax and royalty dollars obtained from the oil industry. The future of the oil industry has next to nothing to do with d-2.

Second, the state and the Natives are selecting most of the economically valuable lands. The boundaries of parks and refuges are drawn around most areas of high potential for minerals, timber or agriculture. Five-sixths of Alaska's more valuable mineral lands will remain open to development, for example, even if the Udall bill, H.R. 39, passes Congress in its present form. Less than a fifth of Alaska's commercial timber is included in d-2 proposals. Of agricultural lands ranked in the top tenth percentile, three quarters are in State or Native ownership. None are included in H.R. 39.

* * * wilderness areas would cover less than five percent of the nation's stock of resources including oil, gas, hard-rock minerals, and timber. Because of high costs, few large mines are expected to open in Alaska for decades or longer, regardless of d-2 withdrawals.

Fourth, d-2 proposals will not put people out of work. None of the state's major employers will be forced to curtail activities. The Forest Service calculates, for example, that H.R. 39 will not affect existing timber industry jobs in the Southeast region.

Fifth, d-2 lands will not block access to private and state land. I recently participated in a workshop that reviewed maps prepared for the Congressional Office of Technology Assessment with the help of experts from the minerals industry. We found surprisingly few places where transportation might cross d-2 lands to reach non-federal mineral deposits. Where there were conflicts, alternative routes appear available. Furthermore, H.R. 39 now includes a provision for opening d-2 areas to access corridors in cases of national need. This procedure is similar to the process recently used successfully in determining the routing of the gas pipeline.

Sixth, in times of real need the d-2 areas can be opened to development. As a result of the hearings in Alaska and across the country last summer, H.R. 39 has been modified. One of the changes is to allow mining in some of the more promising areas if in the future Congress and the President find it necessary.

We can conclude that the d-2 question has little or nothing to do with Alaska's economy, growth, jobs, or contribution to national material needs.●

HOUSE BROADCAST COVERAGE: TIME TO VOTE

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. ANDERSON of Illinois. Mr. Speaker, it has now been two and one-half months since the House Rules Committee issued its report, "Broadcasting the Proceedings of the House." Under the terms of House Resolution 866 passed by the House last October 27, the committee was to conduct a study of all alternative methods of providing complete and unedited audio and visual broadcasting of the proceedings of the House of Representatives and report its findings and recommendations as soon as practicable but not later than February 15, 1978.

A closely divided committee recommended that the House should operate its own broadcast coverage system, following the example and building upon the experience of the Canadian Parliament. Those of us on the minority side felt that the coverage should be provided by a pool of professional broadcasters. (See House Report 95-881)

While House Resolution 866 authorizes the Speaker to devise and implement a broadcast system as soon as practicable after receipt of the report of the committee, the Speaker has publicly indicated on at least three occasions that he would give the House a chance to vote on which alternative method of broadcast coverage it wanted.

The time which has elapsed since the Rules Committee issued its report has already stretched beyond the "soon as practical" period the House gave the Speaker to devise and implement a system for publicly televising our debates under House Resolution 866. Yesterday I sent a letter to the Speaker asking the status of the broadcast system and urging that he put the alternatives to a House vote as soon as possible. The letter follows:

MAY 1, 1978.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker, U.S. House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: As a member of the Rules Committee's Subcommittee on the Rules and Organization of the House, I am writing to inquire into the status of the House broadcast system authorized by H. Res. 866 adopted by the House on October 27, 1978.

As you will recall, that resolution instructed the Rules Committee to report on

alternative broadcast systems by February 15, 1978, and the Speaker to devise and implement a system for broadcasting House proceedings "as soon as practicable after receipt of the report of the committee."

It has now been two and one-half months since the Rules Committee issued its report. You have publicly indicated on at least three occasions that you would give the House a chance to vote on the broadcast alternatives—namely, whether the House should own and operate its own broadcast system or whether professional broadcasters should provide the coverage.

I appreciate the fact that the Rules Committee raised some technical concerns about what must be done before such a system can be fully operational, and that you have indicated that these concerns preclude going public before next year. But I hope you realize that many of these concerns cannot be dealt with until the new cameras and equipment have been purchased, installed and tested, and that considerable time will be needed for these steps. It is therefore vital that a decision be made by the House as soon as possible so whoever is charged with the responsibility can begin to gear up for next year.

I would appreciate your response to this letter at your earliest convenience.

Very truly yours,

JOHN B. ANDERSON,
Member of Congress.●

MISS ROSEMARY DURKIN, FIRST WOMAN ELECTED TO MAJOR OFFICE IN YOUNGSTOWN, OHIO, TO BE HONORED

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. CARNEY. Mr. Speaker, Miss Rosemary Durkin, clerk of the municipal court of Youngstown, Ohio, will be honored at the Truman-Johnson Democratic Women of Youngstown's annual "Tribute to Women" luncheon. The luncheon will be held on May 6, 1978, at the Sokol Center in Youngstown, Ohio.

Miss Durkin, a graduate of Ursuline High School, was appointed deputy clerk of the Youngstown municipal court in 1946, by the late Judges Peter B. Mulholland, John J. Buckley, and Robert E. Nevin. She served in her appointed capacity under William G. Evans, Richard J. Barrett, and George Vukovich, until she was appointed administrative assistant to Mr. Vukovich in 1969.

Miss Durkin was appointed chief deputy and assistant clerk of the court on January 10, 1975. In November of the same year, she was elected clerk of the Youngstown municipal court. Her election to this position marked the first time that a woman had been elected to a major Youngstown city office.

In addition to her professional success, Miss Durkin is actively involved in community service through her participation in a variety of organizations. She is a member of St. Edward's Church, the Mahoning County Federation of Democratic Women, and the Mahoning Valley Chapter of the Irish National Caucus. For 2 years, she chaired the door-to-door canvass of the American Cancer Society.

Mr. Speaker, Rosemary Durkin is obviously a woman of extraordinary ability and dedication; she is a valuable asset to our community. Her professional accomplishments, and her continued energetic participation in Youngstown organizations, make her an excellent example for other women to follow. I want to take this opportunity to commend her for her many years of community service, and I wish her continued success in her endeavors. When her many friends join in honoring her, I will be there.●

DÉTENTE IS DEAD—OR WAS IT EVER REALLY ALIVE?

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. ASHBROOK. Mr. Speaker, I have always been fascinated at how people throw around the word "détente" like it really means something. As we all know, this magical word supposedly describes current relations between the United States and the Soviet Union.

But is there any substance behind this word? I was interested to read an issue brief prepared by the Library of Congress Congressional Research Service on the subject of détente with the Soviet Union. I could not help but notice how different the description varied from reality.

According to the Library of Congress:

> The criterion for success of détente is restraint on both side. . . . Ideally, détente conditions an adversary's behavior, which in turn, may affect policy.

Based on these standards, there is no détente at all. The Soviets have not restrained their activities. They have not changed their behavior.

Instead, the Soviets have continued their policies of aggression throughout the world. Probably their most impressive military venture at this time is on the continent of Africa. The Soviets reportedly have more than 1,000 officers and 37,000 troops of their Cuban allies stationed in Angola and Ethiopia. This Cuban mercenary army has been used to change the balance of power in Africa and advance Soviet interests by military force.

When the United States has criticized Soviet aggression in Africa, the Soviet Union has made it clear that our concern is unimportant. Despite our views, Soviet President Leonid Brezhnev has gone on record that the Soviet Union is not about to change its policy. In fact, Brezhnev recently said there was no contradiction between détente and Moscow's African policy, and that "imperialist propaganda" was making this point in an effort to "distort the meaning and goals of Soviet foreign policy."

So much for restraint. So much for a change in behavior. So much for détente.

It is apparent that détente is a word without substance. The Soviets continue to do what they want to do, without regard to the policy of détente.

Détente is dead. Or perhaps it was never really alive.●

WHY NICK?

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. BINGHAM. Mr. Speaker, in the spring of 1974, Nick Shields, a 23-year-old San Francisco man became the 14th victim of the so-called Zebra killers. He was shot as he returned home from lacrosse practice on a San Francisco street at 9:30 in the evening. There was no attempted robbery. He was merely shot three times and left to die on the sidewalk.

This terrible tragedy moved his grieving parents, Pete and Jeanne Shields, to become active in the movement to control handguns. Pete Shields is today chairman of the National Council to Control Handguns, a citizens group. Jeanne Shields works at the NCCH as a volunteer.

In this week's Newsweek, Jeanne Shields calls on the people of our country to join together in an effort to remove virtually all handguns from civilians hands. I join Jeanne Shields in that call. My bill, H.R. 8128 would prohibit the importation, manufacture, sale, purchase, or possession of handguns except by members of the Armed Forces, law enforcement officials, and licensed dealers and collectors. I have long pushed for this type of legislation but, despite the strong support of the American people as expressed in the public opinion polls, we are still far from our goal. I only hope that Mrs. Shield's recollection of the death of her son will bring more people to our cause and that, finally, the Congress will stop, and listen, and act.

The article follows:

WHY NICK?

(By Jeanne Shields)

If the telephone rings late at night, I always mentally check off where each child is, and at the same time get an awful sinking feeling in the pit of my stomach.

Four years ago, April 16, we had a telephone call very late. As my husband answered, I checked off Pam in Long Beach, (California), Nick in San Francisco, David in New Brunswick (New Jersey) and Leslie outside Boston. The less my husband spoke, the tighter the knot got in my stomach. Instinctively, I knew it was bad news, but I wasn't prepared for what he had to tell me. Our eldest son, Nick, 23, had been shot dead on a street in San Francisco.

Nick was murdered at about 9:30 p.m. He and a friend, Jon, had come from lacrosse practice and were on their way home. They stopped to pick up a rug at the home of a friend. While Jon went in to get the rug, Nick rearranged the lacrosse gear in the back of their borrowed Vega. He was shot three times in the back and died instantly, holding a lacrosse stick.

Nick was the fourteenth victim of what came to be called the "Zebra killers." Between the fall of 1973 and April 16, 1974, they had randomly killed fourteen people and wounded seven others—crippling one for life. Four men were subsequently convicted of murder in a trial that lasted thirteen months.

My son was tall, dark and handsome, and a good athlete. He was particularly good at lacrosse and an expert skier. Nick was an ardent photographer and wrote some lovely poetry. He was a gentle and sensitive man

with an infectious grin and the capacity to make friends easily. It was hard for me to believe he was gone.

OVERWHELMING RESPONSE

The generous support and love of our friends gave us the strength to go on during those days. The calls and letters that poured in from those who knew Nick were overwhelming. In his short life, Nick had touched so many people in so many ways. It was both heartwarming and very humbling.

But always, running through those blurred days was the question, Why? Why Nick? My deep faith in God was really put to the test. Yet, nothing that I could do or think of, or pray for, was ever going to bring Nick back.

Because Nick was shot two days after Easter, the funeral service was filled with Easter prayers and hymns. Spring flowers came from the gardens of friends. The day was mild, clear and beautiful, and a kind of peace and understanding seeped into my aching heart.

No matter how many children you have, the death of one leaves a void that cannot be filled. Life seems to include a new awareness, and one's philosophy and values come under sharper scrutiny. Were we just to pick up the pieces and continue as before? That choice became impossible, because a meaning had to be given to this vicious, senseless death.

That summer of 1974, the newspapers, magazines and television were full of Watergate. But I couldn't concentrate on it or anything else. Instead I dug hard in the garden for short periods of time, or smashed at tennis balls.

On the other hand, my husband, Pete, immersed himself in a study of the gun-control issue. Very near to where Nick had died, in a vacant lot, two small children found a gun—*the* gun. It was a .32-caliber Beretta. Police, in tracing it, found that initially it had been bought legally, but then went through the hands of seven different owners—most of whom had police records. Its final bullets, fired at close range, had killed my son—and then it was thrown carelessly away.

INEFFECTIVE LAWS

Pete's readings of Presidential commission recommendations, FBI crime statistics and books on the handgun issue showed him that our Federal laws were indeed weak and ineffective. He went to Washington to talk to politicians and to see what, if anything, was being done about it. I watched him wrestle with his thoughts and spend long hours writing them down on paper—the pros and cons of handgun control and what could logically be done about the proliferation of handguns in the nation.

Through friends, Pete had been introduced in Washington to the National Council to Control Handguns, a citizens' lobby seeking stricter Federal controls over handguns. As Pete became more closely associated with the NCCH as a volunteer, it became increasingly obvious that he was leaning toward a greater involvement.

Consequently, with strong encouragement from me and the children, Pete took a year's leave of absence from his job as a marketing executive so that he could join NCCH full time. A full year and a half later, he finally resigned and became the NCCH chairman.

The main adversaries of handgun control are members of the powerful and financially entrenched National Rifle Association, macho men who don't understand the definition of a civilized society. They are aided by an apathetic government which in reality is us, because we citizens don't make ourselves heard loud and clear enough. How many people are in the silent majority, who want to see something done about unregulated sale and possession of handguns? Why do we register cars and license drivers, and not do the same for handguns? Why are the production and sale of firecrackers severely restricted—and not handguns?

A GRIM LITANY

I now work in the NCCH office as a volunteer. One of my jobs is to read and make appropriate card files each day for a flood of clippings describing handgun incidents. The daily newspapers across the country recount the grim litany of shootings, killings, rapes and robberies at gun point. Some of it's tough going, because I am poignantly aware of what a family is going through. Some of it's so appalling it makes me literally sick.

Some people can no longer absorb this kind of news. They have almost become immune to it, because there is so much violence. To others, it is too impersonal; it's always something that happens to somebody else—not to you.

But anybody can be shot. We are all in a lottery, where the likelihood of your facing handgun violence grows every day. Today there are 50 million handguns in civilian hands. By the year 2000, there will be more than 100 million.

So many families have given up so much to the deadly handgun. It will take the women of this country—the mothers, wives, sisters and daughters—to do something about it. But when will they stand up to be counted and to be heard? Or will they wait only to hear the telephone ringing late at night?●

PRIORITIZING OUR SPENDING—THE MITCHELL TRANSFER AMENDMENT

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Ms. CHISHOLM. Mr. Speaker, once again this year we are faced with a spiraling defense budget that continues to grow each year. The continuing economic crisis reflects a changing public attitude toward our Government and its spendings. Our Government is just not meeting the needs of its people.

The American people are facing an extremely important question of where to place our priorities in spending. We should consider the importance of altering current national spending goals in order to take full advantage of opportunities to meet the basic needs of our constituents.

This year's budget resolution continues to reflect significant increases in military spending, while at the same time placing serious restrictions on programs related to human needs. Since we are in a time of peace in our country, we should not allow disproportionate increases in the defense budget just for the sake of a rising economy and threats of increases in military manpower and procurement from other countries.

Because of my commitment to the problems that we encounter in the areas of employment, adequate health care, housing and the special problems relating to the aged and youth, I am in full support of the transfer amendment which is being offered by Representative PARREN MITCHELL. The transfer amendment to the budget resolution would raise the allowable spending in some categories, while decreasing it in others. Mr. MITCHELL's amendment will give the American people an opportunity to redress the imbalance between our national defense needs and those programs that guarantee that all people have a right to a basic standard of living. Clearly we recognize the needs of our citizens—the lack of job opportunities, the problems relating to our teenagers, and the deterioration of our cities due to large increases in crime and poverty.

The present trend of our economic spending must be reevaluated in order to address the problems in the areas of social services that are badly needed.

The American people must begin to resolve these problems through support of the transfer amendment. It will lay the foundation for a more productive, more stable, and less militarized economy in the future.●

FOOD, DRUG, AND COSMETIC ACT AMENDMENTS

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. CARTER. Mr. Speaker, today I am introducing amendments to the Food, Drug, and Cosmetic Act which have been developed by the American Medical Association to improve the current drug approval process. As you may know, the Health and Environment Subcommittee on which I serve is planning to take up the issue of drug regulation reform in the coming months. I believe it is important to know the recommendations of the representatives of the medical profession on this complex issue, because any major revision of current law will inevitably have an impact on patient care and the practice of medicine. I am introducing these amendments so that my distinguished colleagues in the House and on the subcommittee will have an opportunity to consider them along with other proposals which have been or will be developed.

A brief summary of the proposed amendments follows:

SUMMARY

1. An optional procedure is provided as part of the new drug approval process where drugs that may provide a significant advancement in the treatment of disease would be available to practicing physicians prior to the drug's final approval by FDA. Any physician who agreed with a drug's sponsor to make certain reports and maintain certain records would be able to obtain the drug for patients if the FDA and the drug sponsor had entered into a preapproval marketing agreement. Under a new Section 505(k) of the Act, this procedure would take the drug from the clinical research setting into the physician's practice and would provide a larger data base of information to monitor adverse reactions of the drug in actual use on patients. A preapproval marketing agreement could remain in effect for a maximum of three years.

2. Section 505(i) of the Act would be amended to authorize an investigational new drug protocol agreement as an alternate procedure to the current investigational

new drug research procedure. The agreed upon protocol between FDA and the drug's sponsor would detail the type of information that FDA would require for a new drug application (NDA) and would contain details of the drug sponsor's program to obtain the information to be required by FDA. The agreement would be binding, except that FDA would still have the authority to deny an NDA if the safety and efficacy of the drug was not established.

3. Section 505(c) would be amended to establish fixed deadlines for review of new drug applications by FDA. The amendment would also limit the number of extensions from the deadline that FDA could take before notice and public hearings would be required as to further extensions.

4. A new Section 711 would be added to the Act that would authorize a drug sponsor to request an independent review of the scientific basis for any adverse decision made by FDA regarding the sponsor's drug. The review would be made by a Select Committee of the National Academy of Sciences and the Committee would be required to submit its recommendations to FDA.

5. Language would be added to Section 505(d) of the Act that would provide that data derived from well-controlled clinical investigations regarding drugs that are conduced in foreign countries would be recognized on an equal basis with such well-controlled clinical investigations conducted in the United States and Canada.

6. A new Section 505(1) would be added to the Act to strengthen the prohibition against the submittal of false or misleading data to FDA. Corporate officers, directors and managers would be held responsible for the false and misleading submissions made by their corporations if such persons knew or should have known of such a false or misleading submission.

7. Labeling requirements for drugs would be modified. Section 503(b)(2) of the Act would be amended to require that the label on prescription drugs contain the name, quantity and strength of the drug contained in the package. Section 502 would be amended by establishing a new Subsection (f) that would authorize the FDA to require that a patient information leaflet (PIL) be made available by manufacturers, to physicians for distribution to patients where the physician determines that provision of supplemental data to the patient would be appropriate. PIL's would be required for a drug only after the FDA had received the advice and concurrence of a National Advisory Panel established by the bill. A majority of the panel members would be practicing physicians nominated by national medical professional and specialty societies to serve for three year terms. Information provided in the PIL would be supplemental to that provided to the patient by the prescribing physician. The language that FDA could require in the PIL would be objective and nonthreatening and could not contain statements of opinion by FDA as to proper or acceptable modes of practice. Approval by the National Advisory Committee would also be required for the language contained in the PIL. The amendment would reserve to the prescriber the responsibliity of distributing a PIL to a particular patient.

8. Section 505(e) would be amended to provide an alternate procedure to the existing authority of the Secretary of HEW to suspend a new drug application if he finds a drug poses an imminent hazard to the public health. The amendment would authorize the Secretary of HEW to suspend the approval of a new drug application or to require amended labeling for the drug after the Secretary has determined that the drug poses a serious and substantial risk of harm to the public health and after an opportunity for an expedited hearing.●

MISUSE OF CETA FUNDS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. ASHBROOK. Mr. Speaker, I have been deeply disturbed by the numerous reports of abuse, waste, and outright fraud found in many of the Comprehensive Employment and Training Act programs. Money that should be going to assist the unemployed citizens of our Nation is all too often being diverted to improper uses.

In New York City, for example, some CETA money is used to teach Islam rather than to provide jobs. The governor of another State is alleged to have paid employees in his own department store with CETA money. Relatives of Oklahoma politicians are reported to be on the CETA payroll. Unfortunately, the list goes on and on.

A recent article in Human Events catalogs some of the blatant examples of misuse and waste. Among other things, CETA money has been used by the D.C. City Council to build one of the Nation's largest city council staffs; by a prospective ballerina to attend ballet school; and by feminists and gay rights groups to promote their political causes.

Following is the text of the Human Events story:

CARTER PRESSES FOR $11.4-BILLION JOBS PLAN

A request by President Carter, now pending before a House Education and Labor subcommittee, would raise spending for so-called "public service employment" under the Comprehensive Education and Training Act (CETA) to $11.4 billion next year—a jump of $3 billion.

What is of particular significance about this measure—aside from its huge cost—is that the "public service jobs" concept, or tax-subsidized employment, has become a keystone to virtually all welfare-related programs pushed by the White House or the majority in Congress. Indeed, the President's welfare reform measure (as well as Sen. Howard Baker's) relies on CETA jobs, as does the full-employment Humphrey-Hawkins measure just passed by Congress (see page 19 for rollcalls on H-H).

Yet the evidence continues to mount that the CETA program is plagued by wastefulness, financial mismanagement and widespread political abuse. Even worse, the whole idea is basically fraudulent in that it does not increase the total number of persons employed in the United States, as its advocates suggest, but simply shifts thousands of workers out of the private sector into government-funded "make-work" jobs.

The kind of political hanky-panky to which the billions in CETA funds floating around the country gives rise was dramatically illustrated in a series of investigative stories by Washington *Star* reporter Michael Kiernan. In the first of these articles on March 1, Kiernan wrote that "The D.C. City Council has made extensive and sometimes illegal use of federal jobs funds to create one of the largest City Council staffs in the country."

Altogether, said Kiernan, 56 council employes—or nearly half of the 126-person staff—receive $480,000 a year in CETA funds. While this would average out to $8,571 a year per CETA-funded staffer, he went on, "because of District supplements, the CETA employees working for the council make as much as $18,000 a year.

"In theory, CETA employes are supposed to be hired based on their need, length of unemployment and job qualifications. But the *Star* has uncovered a number of examples suggesting that CETA employes at the council also have been hired on the basis of whom they know, despite guidelines aimed at keeping federal programs out of politics."

Among other examples, the paper noted that the council had used CETA funds three years ago to hire the wife of a local dentist who is a political supporter of the council chairman. Though CETA supposedly was meant to provide temporary employment, this woman—who presumably is not economically disadvantaged, considering her husband's profession—continues to earn $11,000 a year under the program.

In another case, wrote Kiernan, the council used CETA funds to hire the son of a councilwoman. This son "now works as a legislative liaison between the council and Capitol Hill at a salary of more than $17,000."

But political favoritism is only one problem with CETA. Others stem from the fact that the Labor Department—particularly in the wake of last year's enactment of President Carter's economic stimulus package, which required a rapid doubling of the number of public service jobs across the country to a total of 725,000—has put intense pressure on local governments to meet monthly hiring quotas under the program.

One result is that local municipalities have emphasized quantity rather than quality, with governments trying to keep CETA employes on the payroll even though they are supposed to encourage CETA workers to find unsubsidized jobs in the private sector.

Still another problem is that, under CETA, local governments are supposed to create new jobs. Putting CETA workers into jobs that otherwise would have been financed out of local funds is forbidden. But, as one suburban official in the Washington area told the *Star*: "That sounds fine, in theory. But the way it turns out, needed county services are declining at the same time we're spending a lot of money on orchestras, arts groups and non-profit agencies."

The official was not exaggerating. The *Star* cited one young woman, for instance, who was among nine receiving $145 a week in CETA funds to attend a ballet school in Montgomery County, Maryland. When asked what it was like to have the federal government paying for her dance lessons, she smilingly said:

"It's great. I've been dancing for eight years now, and recently I've had to take a lot of part-time jobs to support myself. Now, under this new jobs program, I can concentrate entirely on my dancing and get paid at the same time."

As the example of this young woman suggests, many who are benefiting at taxpayers' expense are not among the hard-core unemployed, who are so prominently mentioned by proponents of the public-service jobs concept.

As economist David I. Meiselman noted in a recent study: "Evidence from diverse sources implies that CETA participants are best classified as being from the middle of the skill range, not as unskilled. Fewer than 46 per cent of the persons hired under CETA were 'economically disadvantaged' according to the government's definition (one who lives in a family receiving cash welfare payments or earning income less than the poverty thresheld). Only 15 percent of all CETA participants in PSE [public service employment] or training programs had been receiving welfare before entering the program.

"And findings of a national survey show that a substantial fraction, over 20 per cent of PSE workers, are actually employed on the day before getting the subsidized job."

The costs of such make-work "jobs" are staggering. In New York City, for example, the "CETA Artists Project"—under which people whose skills range from painting and acting all the way to circus juggling are getting paid $10,000 a year—has a price tag of $4 million.

Yet another flaw in CETA is that much of this funding goes to pay for staffers of groups promoting liberal-left political causes. As we reported last fall (Nov. 26, 1977, page 3), a Brooklyn-based feminist group called the National Congress of Neighborhood Women (NCNW), all of whose paid staff of approximately 20 were receiving their salaries courtesy of CETA, had applied for a total of 200 additional CETA "slots," which they would share with approximately 40 other feminist-oriented organizations located in New York City.

Human Events has now learned that the NCNW's request was approved by the city's Board of Estimates on February 16. As a result, the NCNW—which promotes ERA, abortion and other controversial issues—will have 23 additional full-time staffers this year paid by the taxpayers. Other groups sharing in the NCNW's grant include the National Gay Task Force, which received five CETA-funded staffers; the New York Women's Liberation Center (seven slots), and four chapters of the National Organization for Women, which received a total of 17 CETA staffers.

According to a spokesman for the city, who asked not to be named, each of the 200 people hired under the NCNW's CETA grant will make from $8,000 to $10,000 this year. The total cost to the taxpayers of this one grant alone: $2.5 million. And this can be multiplied many times over in cities and towns all across the country.

Obviously, the kind of people who are qualified to work for such politically activist groups as the NCNW and NOW would also have the skills, by and large, to work in the private sector. Indeed, the ballerina quoted in the Star admitted outright that her CETA "job" had enabled her to quit working in unsubsidized employment.

This confirms the finding of the Meiselman study that "an increase in the number of public sector jobs will accompany a decrease in the number of private sector jobs." Moreover, according to Meiselman, since the private-sector output displaced by the public service jobs "generally would have been more useful and valuable than the additional public sector services," the result is that the "real value of output will fall, causing an increase in inflation. Average real wages and total employment in turn, also must fall."

Rather than creating still more public service jobs, says Meiselman, the government should pass a federal tax cut if it is serious about increasing employment in this country. "Given the slowdown in recent years of our economic growth," he concludes, "shifting resources to create more make-work and busy-work projects hardly would seem to be called for today."

Yet that is exactly what President Carter and the liberals in Congress are calling for in the welfare "reform" and Humphrey-Hawkins measures, as well as the proposed CETA extension.●

TAX CREDIT FOR PRIVATE SCHOOLS UNCONSTITUTIONAL

HON. WILLIAM M. BRODHEAD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. BRODHEAD. Mr. Speaker, it has come to my attention that several experts in constitutional law recently expressed their joint view that a tax credit for private elementary and secondary school tuition would be unconstitutional. I want to make my colleagues aware of this joint letter.

APRIL 27, 1978.

DEAR REPRESENTATIVE: We are writing to express our view of the constitutionality of the Packwood-Moynihan bill or any other measure which permits a tax credit for tuition paid to sectarian elementary and secondary schools.

This letter is prompted by our concern that the constitutional issue has been blurred during the current debate over tax credit legislation. The last time tax credits were seriously debated in Congress was in 1972—before the Supreme Court decided *Committee for Public Education* v. *Nyquist*, 413 U.S. 756 (1973). It might have been possible to argue then that opinions as to the constitutionality of tax credits were speculative. Given the *Nyquist* opinion, however, such an argument is no longer credible.

Simply stated, the proponents of tax credit legislation are advocating a course of action which in our opinion is unconstitutional under the *Nyquist* ruling insofar as such credits would extend to tuition payments to non-public elementary and secondary schools.

HON. THOMAS F. RILEY OF ORANGE COUNTY RECEIVES AWARD

HON. ROBERT E. BADHAM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. BADHAM. Mr. Speaker, it is my great pleasure to call the attention of my colleagues to the occasion of the third annual award to be given Saturday, May 13, 1978, by the Mardan Center of Educational Therapy to the Honorable Thomas F. Riley for his outstanding achievements and service to the citizens of Orange County.

Mr. Riley, who is chairman of the Orange County Board of Supervisors, has a record of service to youth in his community. Included among his many credits are the presidency of the Big Brothers of Orange County, advisory board member of International Orphans, Inc., honorary chairman of the Orange County Marine Corps Toys for Tots program, chairman of the Eagle Scouts Review Board and chairman and nominating committee member of the Del Mar District of the Boy Scouts of America.

The dinner held by the Mardan Center, which is located in Costa Mesa, Calif., in the 40th Congressional District, is a fundraising event with all proceeds benefitting the center, a nonprofit private school for children with learning disabilities.

Mardan has for many years been dedicated to the enhancement of successful academic, emotional, and social learning experiences for children who have been frustrated by failure in their personal growth and development.

Scholarship funds provided by proceeds from the award dinner will enable those students whose parents cannot afford to pay the tuition fees to benefit from the Mardan services they need.

Therefore, I rise on this occasion to congratulate Tom Riley for his contribution to the community and the Mardan Center for the excellent services it has provided to the community since the center was established in 1963.●

SAFE DRINKING WATER STANDARDS QUESTIONED

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. ANDERSON of Illinois. Mr. Speaker, I recently received a very disturbing position paper from the Illinois Environmental Protection Agency raising serious questions about the efficacy of proposed U.S. EPA regulations on the organic chemical content of public water supplies. In summing up the conclusions of the paper, the acting director of the Illinois EPA, Mr. Michael P. Mauzy wrote:

> In our view, the U.S. EPA proposal represents an extreme reaction to a questionable problem. The solutions proposed are unreliable, of unknown benefit and of high cost to water users.

The Illinois EPA position paper, entitled, "Position on the Proposed Regulations for Control of Organic Chemical Contaminants in Drinking Water," was developed in concert with the State Department of Public Health and was presented at a U.S. EPA hearing in Miami, Fla. on March 23, 1978. The paper questions the EPA claim that chloroform and other chlorinated organics found in drinking water are carcinogenic to man and must be removed through granular activated carbon treatment. The Illinois EPA notes that in the rodent tests, "where test animals were fed very high dosages of chloroform, far exceeding any level to which humans could be expected to be exposed in drinking water at the maximum levels found to date," there was evidence that "chloroform is a carcinogen." However, in a study carried out on dogs over a period of 7 years, there was no noticeable effect * * * from chloroform. While the study concedes that 7 years may have been too short a time to draw conclusions, it notes that "there are other studies and basic facts which cast some doubt on whether chloroform is indeed a human carcinogen," including a study of people who were addicted to cough syrup containing chloroform.

What is perhaps most alarming about the Illinois EPA study is the suggestion that the proposed cure may be worse than the problem. The Federal program calls for cities of more than 75,000 persons to install granular activated carbon as part of the water treatment proc-

ess if chloroform is found in larger amounts than 100 parts per billion parts of water. To quote from the study:

Granular activated carbon is known as a good breeding ground for bacteria. It therefore is highly probable that bacteria will grow in many of the GAC units installed for this purpose. Here again, given the problems found in operation, it is probable that at least some of these units will be putting bacteria into the water, and these bacteria will not be removed satisfactorily by proper disinfection. We therefore would be increasing the immediate hazard for at least part of the population.

Mr. Speaker, the questionable carcinogenic effect on man of chloroform and other chlorinated organics found in drinking water, combined with the potential bacteria breeding effects of the proposed treatment process call for a serious reexamination of the U.S. EPA standards and proposed solution. I am today writing to the Administrator of the U.S. Environmental Protection Agency, Mr. Douglas M. Costle, asking for a detailed response to the Illinois EPA position paper. I am also writing to Chairman Paul Rogers of the Health and Environment Subcommittee of Interstate and Foreign Commerce, asking that oversight hearings be held on the Safe Drinking Water Act.

Finally, I want to commend the Illinois EPA and Public Health Department in taking seriously their invitation and responsibility to comment on the proposed standards. At this point in the RECORD I include a letter I received from Michael P. Mauzy, acting director of the Illinois EPA, a press release on the position paper, and an editorial from the State Journal Register:

ILLINOIS ENVIRONMENTAL PROTECTION AGENCY,
April 5, 1978.

Hon. JOHN B. ANDERSON,
U.S. Representative,
Washington, D.C.

DEAR REPRESENTATIVE ANDERSON: Attached for your information is a position paper regarding the recently proposed U.S. EPA regulations on the organic chemical content of public water supplies. This position was developed in concert with the Illinois Department of Public Health and was presented at a U.S. EPA hearing on March 23, 1978, at Miami, Florida.

In our view, the U.S. EPA proposal represents an extreme reaction to a questionable problem. The solutions proposed are unreliable, of unknown benefit and of high cost to water users.

We have solicited active involvement in the regulatory process by other national and state groups and we hope that they will not be passive in their consideration of this U.S. EPA regulatory proposal. Only by active involvement in the regulatory process, do we believe that U.S. EPA can secure sufficient information for decision making on this important matter. Naturally, we hope and expect that many Illinois groups will be able to support all or major portions of our position.

I believe that this important matter should be brought to your attention because the fundamental technical issues involved in this regulation are similar to those considered recently by Congress concerning the saccharin ban by FDA. Perhaps Congressional direction on the appropriate limits for administrative action by federal agencies on such matters of national application and concern are needed.

I hope that you will find our views of interest. Please let me know if we can provide additional information.

Sincerely,

MICHAEL P. MAUZY,
Acting Director.

STATE EPA QUESTIONS—NEW DRINKING WATER RULES

SPRINGFIELD, ILL., March 15.—The proposed controversial federal program to use granular activated carbon to remove synthetic chemicals from drinking water not only presents health and financial problems for the taxpayer but will give a false sense of security, according to the Illinois Environmental Protection Agency's Division of Public Water Supplies.

The federal EPA is claiming that chloroform and other chlorinated organics which are formed during the chlorination of drinking water, in the amounts found in drinking water, are carcinogenic to man and must be removed through granular activated carbon treatment. In addition, this treatment is mandated as a "safety measure" for water supplies which may be exposed to other synthetic chemicals in their raw water sources.

In a position paper just released, the state agency responded that while it is true that substances which are known carcinogens to animals might also be carcinogenic to man, it is not necessarily true that a substance which is a carcinogen to a specific species of animals will also be a carcinogen to man.

"For example, in addition to the rodent tests which were used, there was another study carried out on dogs over a period of seven years and no noticeable effect could be found from chloroform in this study," said Ira Markwood, division manager. "It may be possible that chloroform is not a carcinogen to dogs, but there are other studies and basic facts which also cast some doubt on whether chloroform is indeed a human carcinogen."

He said that a study of people who were addicted to cough syrup containing appreciable chloroform did not show any carcinogenic effects.

"These people took daily doses for ten years or more and the only effect was reversible hepatoxicity," (liver problems) he said. "Another study, using a dentifrice and mouth wash containing chloroform and used daily for up to a five year period, did not produce hepatoxicity. Therefore, there is no evidence to date to document chloroform carcinogenicity in humans through occupational or environmental exposures."

The federal program calls for cities of more than 75,000 persons to test their drinking water regularly for chloroform and to install GAC as part of the water treatment processes if chloroform is found in larger amounts than 100 parts per billion parts of water.

"We know that granular activated carbon is a good breeding ground for bacteria and is therefore highly likely to put bacteria back into the water. In addition, there is no operational testing that the supply operator can do to know if the GAC is working properly. He'd be flying blind," said Markwood. "Furthermore, the regeneration frequency of the carbon for this purpose is extremely short, which means there will be a high cost for the carbon and its upkeep.

"The report on the economic impact analysis of a trihalomethane regulation for drinking water also states that about 89 per cent of the capital costs are due to the requirement for GAC for 26 public drinking water systems across the nation though these systems are only 30 per cent of the number affected by the regulation. The report states that this same group would have to come up with an additional 28.2 million dollars each year in order to put this additional system in effect.

"If we were to assume as correct the projected maximum tumor risk for these regulations, then we would have the risk of 500 tumors for a designated population of 160 million people. This breaks down to 3.125 tumors per million people. Since the economic impact analysis states that 7,160,000 people would be served by the 26 systems which would be required to use granular activated carbon, we could expect that the carbon, if it were to work completely successfully, would prevent 22.375 tumors per year.

"The cost, therefore, for preventing each tumor would be 1.26 million dollars at the minimum, and probably two or more times that. The money which this requirement would demand could prevent many more tumors if spent in other areas. If these rules go into effect, water bills to the consumer may more than double, with little or no benefit.

"What they are offering is likened to trying to put out a match with a defective fire truck, with no idea whether or not the match is lit, and with a water shortage," he said.

Alternate regulations are proposed by the Illinois EPA which would not decrease the safety of the water, and would promote better removal methods at reasonable costs.

The position paper will be presented at a public hearing in Miami on March 22. Other hearings will be held in seven other cities across the country. Many other states, as well as water utility managers, professional societies, engineering and chemical educators and consultants are expected to join Illinois in opposing the regulations as proposed, according to Markwood.

STATE RIGHT IN RESISTING FEDERAL EPA PROPOSAL

Newly proposed water purification regulations by the federal Environmental Protection Agency have resulted in the state EPA taking an adversary role—and we think rightfully so.

Because of the concern of Congress over organic materials in drinking water, the federal EPA is recommending that public water supplies serving more than 75,000 users must install granular activated carbon filtering equipment if such material, especially chloroform, is found at a certain level in the water.

This highly questionable solution is being vigorously opposed by the state EPA for a variety of reasons. For one thing, although Washington claims chloroform in water causes tumors, current data fails to prove that contention. State water suppliers would be forced to spend millions of dollars on a purification process the need for which is doubtful.

In addition, the federal EPA has latched onto the idea of using granular activated carbon as a filtering agent when its effectiveness is questionable. There is also a health hazard involved because carbon is known as a substance that is a good breeding ground for bacteria. This could create dangers to health that might be greater than from the chloroform itself.

These are the logical and forceful arguments being made by Ira Markwood, manager of the state EPA's public water supplies division. Markwood has prepared a position paper, outlining Illinois' opposition to the rules, that will be presented this Wednesday in Miami during one of eight public hearings being held by the federal EPA on the proposed regulations. These hearings will continue through May 5. After that the federal agency will study the testimony and make a final decision.

On the basis of Markwood's arguments, we believe this is a case where the Federal EPA has reacted to congressional pressure without fully studying the consequences or the alternatives. For example, Markwood says that chloroform develops from a slow reac-

tion of chlorine with natural substances in the water. A much less expensive method of reducing the reaction, he believes, would be achieved by pumping water into a reservoir and chlorinating it before it goes to the treatment plant.

It seems unreasonable to us to saddle public water suppliers with exorbitant costs—approximately $2 million for Springfield's water treatment plant—by using the granular activated carbon process when other methods are available. As usual, those costs will be passed on to the consumer.

Even though Illinois could stand to lose $1 million a year in federal grants should it continue to oppose the regulations if they are approved, the ultimate savings to consumers' pocketbooks, and possibly their health, would be worth it.

We give our support to the state EPA in its opposition to the proposed regulations, and we hope that similarly logical arguments from other states will convince the federal EPA to back down and listen to its sister agencies.●

MARCHING THROUGH SKOKIE

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. CRANE. Mr. Speaker, moral premises are those ethereal principles upon which our constitutional government is founded and from which we claim our constitutional freedoms and rights. When those constitutional freedoms and rights are threatened it is not nearly enough to look at the body of law which protects those freedoms and rights, but to the principles upon which that body of law was built.

Succinctly, this is the logic and reasoning that must finally prevail in the controversy surrounding the Nazis and their march in Skokie, Ill. The following analysis by Prof. Hadley Arkes was brought to my attention and I would like to share it with my colleagues:

MARCHING THROUGH SKOKIE

(By Hadley Arkes)

Will the Nazis finally march in Skokie? They have sought to stage their demonstration in the suburbs of Chicago since May of last year, and until very recently there seemed to be a concert between the state and federal courts to strike down every legal obstacle that might have prevented the Nazis from marching. But suddenly the declamations were suspended and judicial minds were concentrated anew, with the mounting evidence that other groups would be coming to Skokie with the intention of meeting the Nazis in the street with a show of violence. In February Judge Bernard Decker of the Federal District Court had swept away the restrictions on the Nazis and warned against the danger of "permitting the government to decide what its citizens may say and hear." By the end of March, however, Judge Decker issued a retraining order to postpone the demonstration (and, presumably, the "principle" he articulated) for another 45 days.*

In this manner the courts have managed to create the worst of all possible worlds. They have been given the chance over several months to restrain the Nazis on grounds of jurisdictional principles that are fundamental to a democratic order. What they chose to do instead was to affirm the view that a democracy has no principles by which to judge the Nazis—but then to restrain the Nazis anyway without the benefit of principles; the courts have established now that the Nazis have the widest claims to constitutional freedom, but that their freedom of expression may be restricted so long as hostile groups show a willingness to use violence. The result, in short has been decidely antilibertarian. Instead of using the occasion to teach something about the principles that define legitimate interests and expression, the courts have given credence to the most cynical understanding of the law—viz., that the law is merely a polite form in which the force of the many may govern the few.

But of course it is not the mission of the Nazis to attach the people ever more strongly to the institutions and laws of a democratic society, and so whether they march or not, they will have accomplished a large portion of their ends; they will have caused urban citizens of all classes to regard the courts as witless and the laws as amoral.

The choice of Skokie as a target was clearly not inadvertent. Of the 69,000 people in Skokie, about 40,000 are Jews, and of the Jewish refugees from Europe who came to Chicago between 1930 and 1960, most are thought to have settled in Skokie. A group called Survivors of the Holocaust was organized in the metropolitan area, and of the 12,000 members of this group, 7,000 were living in Skokie. Skokie was not chosen by the Nazis, then, because it was the most promising place in which to recruit new members or hold a discussion about the substantive "program" of the party. The aim of the march, very plainly, was to gather attention and create an effect that was well out of proportion to the actual size of the group (which apparently comprises thirty to fifty members). The Nazis could easily accomplish that end by marching into a community of Jews with the full trappings of their symbolism—the uniforms, the caps, the swastikas on arms and flags; by presenting, in short, the kind of spectacle that should elicit outrage among decent people of any persuasion, and by counting on the fact that the public outrage would be sure to attract the attention of the media.

As recenly as 15 years ago in this country, this kind of spectacle would have been seen perfectly clearly for what it was: a deliberate attempt to provoke a population to violence—which is to say, an attempt to provoke *without justification*. It was well understood that the entrance of the police or clergy into a tough neighborhood could provoke the local denizens to fury, but that was not the kind of provocation from which the law sought to protect people. What the law sought to proscribe were demonstrations that stood, in effect, as assaults, and it was hard to find a professor of law who was not alert to these differences. Even the most committed civil libertarians were willing to concede that the law might properly restrain the Ku Klux Klan if that organization sought to stage an entertainment for its own benefit by marching through Harlem. And what was plausible to most of our own scholars of law barely more than a decade ago has remained plausible to the friends of constitutional government in other countries. The British were compelled to make use of their authority in Northern Ireland a few years ago to stop a series of reciprocal provocative marches by Protestants into Catholic areas and Catholics into Protestant areas—marches that persistently sparked violence, and that were conceived with that purpose in mind.

It was in this tradition of governing demonstrations in the streets that the Village of Skokie sought an injunction to restrain the Nazis, and the injunction was granted by a county court. The injunction was later amended slightly to prohibit the Nazis from marching or parading with their uniforms and insignia, and (according to one report) "from distributing pamphlets or displaying any materials that incite or promote hatred against persons of Jewish faith or ancestry or other person." After a series of appeals to the highest courts at the state and federal levels, these restrictions were struck down and the injunction dissolved. In the meantime, though, another injunction was sought against the Nazis by residents of Skokie who were survivors of the Holocaust. These people claimed that the advent of the Nazis to their neighborhood would be the source of a special injury or emotional strain for them by reviving many of the traumas they associated with their experience in the war. This suit is still making its way through the courts.

Ordinarily one can hope that the expense and fatigue of litigation may generate their own benign effects; but the Nazis have been buoyed up in this long process by the support—and the special skills—of the American Civil Liberties Union. The implications of this support have not been lost on Jewish members of the ACLU, and the reaction has been so severe that the ACLU has lost (by some accounts) nearly 25 percent of its members. All of this, however, may simply confirm to the leaders of the ACLU that the sensibilities they possess on these matters are not commonly distributed among the population at large, or even among most of their own sustaining members.

For the leadership of the ACLU, it would be accurate to say that there is ultimately no "truth" in matters political—that all ideas about the proper form of government over men come to rest at the end on personal beliefs or opinions, which cannot finally be measured as true or false. As far at least as the right to speak is concerned, the case for a regime of law and the case for a regime of genocide must be counted, in this view, as equally deserving of a claim *to be heard* and (ultimately) approved by the public. David Hamlin, the executive director of the Illinois division of the ACLU, was moved to say, regarding the Nazis, that "the First Amendment . . . affords us the unique opportunity to bear every *imaginable* idea, and to voice our opinions on any one. *It protects all ideas—popular or despised*, good or bad . . . so that each of us can make a free and intelligent choice." (Emphasis added.) In Mr. Hamlin's understanding, it is a matter of being "popular" *or* "despised": to be despised is to be "unpopular." It is apparently no part of his own understanding that certain things are in themselves, in principle, despicable.

Mr. Hamlin is quite plain on the point that we must be free to hear the Nazis in order to preserve our freedom to *choose* the Nazis if we wish. But of course the Constitution was never meant to be neutral in this way about the choice between despotism and free government. The Founders understood that

* Judge Decker's order was affirmed by an appellate panel of three judges, but then, on the motion of the one dissenting judge, the case was brought before the entire appellate court sitting *en banc*. The Court decided, on a narrow point of law, to reverse the previous decisions on the restraining order: since the Nazis had not actually applied for a permit to march in Skokie, the Court thought it premature to issue the restraining order. The Nazis have now officially applied for a permit to march in June, and the question will be posed again. Some observers on the scene think the appellate court might well act in the end to uphold a restraining order; but it appears now that the argument over the restraining order will be made before the Supreme Court, at the same time that the Court considers the appeal of Skokie in defending its restrictions on the Nazis.

the case for government by consent began with a self-evident truth grounded in nature; as Madison put it during the first Congress, the natural equality of human beings—their capacity for self-governing—had to be understood as an "absolute truth." And if the political order was indeed established on a necessary, self-evident truth, the perspective represented by the Nazis simply cannot be treated for a moment as plausible and legitimate. It cannot be regarded as plausible, that is, without calling into question the truth of those premises on which all constitutional rights depend. In the last analysis, then, it is a mistake to pretend that the Constitution is indifferent to the character and ends of the Nazis.

What the Constitution commends, however, may be one thing; what the Supreme Court has wrought in recent years is another. At this moment our law faces in two directions. On the one hand the Supreme Court has eroded those standards that the law has used over the years to restrain assaults carried out through speech or expression. A majority of the Court has even gone so far as to suggest that there is no principled way to mark off forms of speech that are insulting or defamatory, as against forms of speech that are neutral or inoffensive. Working on this assumption, the Court has made it very difficult to sustain any local ordinance on "provocative" and insulting speech, and, as a result of the decisions that have been taken in this vein over the last seven years, it does in fact become harder to restrain the Nazis in their march in Skokie.

But on the other hand the Court has never overturned the precedents that provided the foundation at an earlier time for the restriction of injurious speech. In fact, the Court has found it necessary in recent years to firm up its commitments to those older precedents; when it comes to the matter of confirming the power of local governments to restrain obscenity and public lewdness, the Court has been compelled to explain, in a more traditional, familiar voice, that not all forms of speech and expression can claim the protection of the Constitution.

The authority that the Court cites most importantly on these occasions is the classic case of *Chaplinsky* v. *New Hampshire*, which was decided by a unanimous Court in 1942. In the passage that is cited most often from that case, Justice Murphy argued for the Court that—

"There are certain well-defined and narrowly limited classes of speech, the prevention and punishment of which have never been thought to raise any constitutional problem. These include the lewd and obscene, the profane, the libelous, and the insulting or "fighting" words—those which *by their utterance inflict injury* or tend to incite an immediate breach of the peace. It has been well observed that such utterances are *no essential part of any exposition of ideas*, and are of such slight social value as a step to truth that may be derived from them is clearly outweighed by the social interest in order and morality." [Emphasis added.]

When the ACLU came to offer its brief for the Nazis is Skokie it insisted that the concept of "fighting" words applied only to personal epithets that arose in "face-to-face" encounters. For some reason it seemed to be assumed that these personal encounters were more likely to "incite an immediate breach of the peace" (more likely, say, than attacks that were made on a whole racial or religious group). At the same time, since the test in *Chaplinsky* was narrowed to assaults of the most personal nature, it was argued that the holding was not meant to cover speech with a larger political significance. In these interpretations the ACLU was essentially following the direction of the Court in recent years, as a majority of the Court has sought to narrow the holding in *Chaplinsky*. But as the four Nixon appointees have continued to point out in dissent, that novel rendering leaves out half of the formula in *Chaplinsky*—and the part that has given *Chaplinsky* its fuller reach and significance.

Justice Murphy had not limited the holding in *Chaplinsky* to speech of a merely personal nature that was likely to elicit violence. His judgment also encompassed words "which by their utterance inflict injury," even if they are not accompanied by overt acts that involve a physical assault. In that respect the opinion served to remind us that, in the strictest understanding of the law, "assaults" have not required bodily contact: they may be carried out just as effectively by assailants who deliberately stop short of touching the victim's body, as in the case of one who strikes at a person and intentionally misses, or one who points a loaded—or for that matter even an unloaded—pistol at another person. The assaults in these acts are implicit in the gestures, and they may be punished even without waiting for bodily injury.

In that sense the case helped to remind us, too, that there is such a thing as psychological injury or shock, which may be quite as grave—and as much of a concern in the eyes of the law—as an assault on one's body, or a broken leg. When all of these points were taken together, the *Chaplinsky* case suggested in a rather compelling way that people had a claim to be protected from unprovoked or unjustified assaults (including verbal or psychological assaults) when they ventured into a public place.

That is not all there was, of course, to the *Chaplinsky* case, but it does suggest the features that have made *Chaplinsky* a case of such enduring importance. In a far more satisfying manner than any other court decision, *Chaplinsky* was able to account for the grounds on which we would be justified in calling the police, for example, and ordering a crowd to "move along" in those cases where nearly everyone would agree that the crowd *should*, in decency, be dispersed, even though there is only speech or expression involved. One need only imagine, in a hypothetical case, that a crowd gathers before the house of the first black family to move into the neighborhood. No violence is initiated; no rocks or bottles are thrown. The crowd merely stands there, perhaps chanting in a low tone, and, as the day wears on, the crowd may go long stretches in which it makes no sound at all. There is no breach of the peace, nor even anything that fits the usual notion of a public disturbance. But when the people leave the house they have to face the crowd, and the crowd simply stands there, intimidating by its very presence.

Since the crowd refrains from violence it might be said that it is engaged in a "peaceable assembly" or perhaps even a form of public protest. For despite the fact that the harassment is aimed at a private family, the gathering of the crowd has a larger political significance: the aim of the crowd, quite clearly, is to have an effect on the character of the community by keeping blacks out. In pursuing this form of intimidation outside the law, the object is to discourage the members of the family from exercising rights that are theirs in the law, and perhaps also to frustrate the ends of a public policy that seeks to bring down the barriers to racial integration. The fact that the crowd refrains from speech or discussion is not enough in itself to reduce the event to an instance of "conduct" rather than "speech": it has already been established over a long train of cases that "expression" may cover symbolic acts or gestures that involve no speech or writing at all: e.g., the rendering of a flag salute, the burning of a draft card, the wearing of an armband.

If the police intervened and dispersed the crowd outside the house, they would clearly be restricting political expression; and yet it should be apparent that the police would be quite justified in intervening. But if the law can reach a case of this kind it is because it is possible to recognize the nature of the words and gestures themselves, *in the context in which they are used*, and understand that they were meant to intimidate or assault.

There has never been any serious doubt that speech bears a special significance in a republican system. Republican government begins with the understanding that the exercise of political power over others must be justified, and it sets about to ensure, through a variety of devices, that people in positions of authority are compelled to offer justifications for themselves. The politics of a republic is a politics that takes place through a public discourse over political things. As our own Founders understood, it is very important, then, for a republic to preserve a proper freedom of discussion about the central concerns of politics—i.e., about the conditions of justice in the society and the substantive ends of the state. The freedom to engage in discussion would be as large as any other freedom properly exercised. It would be restrained only in those instances in which it became the vehicle of injury (or "injustice") to others. At that moment, however, speech could claim no more protection than any other mode of freedom. The Founders rejected the rule of the censor and the conventions of "prior restraint" on publication. But they were uniform in their denunciation of a "licentious" press, and they assumed that the laws of defamation (both civil and criminal) would function as a form of redress against the injuries that were inflicted through speech.

And so, while the Founders understood that a republican regime was a regime of public discourse and conflict, they understood also that a republican regime was a regime of law before it was anything else. As a regime of law its first obligation was to render justice: to protect its citizens against harms that were inflicted on them unjustly, outside a process of law.

When it comes, therefore, to the American Nazis and their freedom of expression, the obligations of the regime are nowhere near as one-sided as libertarians suggest. To the extent that the Nazis have any legitimate role to play at all in the political life of this Republic—a proposition I indulge only hypothetically—the most the polity is obliged to do is respect their liberty to hold meetings, conduct discussions, and make themselves part of the public discourse. But it is not obliged to let them make use of the public streets to carry the symbols of assault and genocide to the very homes of the people who would feel most acutely and properly threatened by them.

These understandings may all arise without strain on the premises of the law as it was—the law that was built on the foundation of the *Chaplinsky* case. The question at this moment is whether those older premises will be restored. The Court still relies, as I have said, on the authority of *Chaplinsky*, but a majority has abandoned the teachings of that case, and the abandonment became manifest in 1971 with Justice Harlan's remarkable opinion in *Cohen* v. *California*. There is not enough space here to treat that case in the detail it warrants or to chart the ways in which Justice Harlan managed to overturn every premise that was essential to the doctrine in *Chaplinsky*. The case involved a young man who walked through the corridors of the County Courthouse in Los Angeles wearing a jacket that bore the inscription "——— the Draft." Before it was over, Harlan had sought to deploy the full moral weight of the Constitution in order to protect the "speech" on Cohen's jacket as

if it were a political statement on the order of the Federalist Number 10. And he could not accomplish that end without revising in a radical way the traditional understanding of "speech" (let alone the concept of propriety).

In a reversal of *Chaplinsky* Harlan argued that if speech contained a residue of political significance it was presumptively protected, no matter how injurious it may be, or how void of substantive content. If the speech was presumptively protected, the burden of avoidance fell to those who felt assaulted or offended by it (and it was thought proper, in this light, to ask the victim to turn away or go elsewhere rather than ask the assailant to restrain himself in public).

But the conviction that any sign or expression was "political" depended on the reliability with which it could be said that the sign conveyed a point or stated an argument. In the case of Cohen, Harlan was convinced that the jacket was presenting a statement—no less—on a matter of public policy. According to Harlan, what Cohen was doing with his jacket was "asserting [a] position on the inutility or immorality of the draft." And yet it should have been apparent that "* * * the Draft" did not necessarily mean either one of those things—that the draft was "immoral" or "inutile." Very likely it meant neither. The profanity on the jacket, like most expressions that have acquired the status of "swear words," had a certain coarseness to it that was an important part of its meaning and of the purpose for which it was used. There was no substantive argument about the military draft that Cohen would have been prevented from making if he had merely been asked to remove his jacket (and his sign) in a public place. And for the same reason, there would be no decent substantive argument that the American Nazis would be prevented from making if they were merely restrained from carrying out a provocative march into the Jewish neighborhoods of Skokie.

But Harlan's opinion in the *Cohen* case ruled out this traditional understanding because it denied at its root that there were knowable differences any longer between decent and indecent expression. "One man's vulgarity," said Harlan, "is another's lyric," and it was precisely "because governmental officials cannot make principled distinctions in this area" that the Constitution left these "matters of taste and style so largely to the individual." What Harlan denied, then, was the existence of any standards for identifying speech that was truly offensive, because the offensiveness of the words depended entirely on the subjective feelings of the people who heard them. And therefore it could only be, as he remarked, that the decision as to what langauge is fit for a public place must be left "largely [in] the hands of each of us."

With the full sweep of Harlan's opinion one comes to discover what it takes these days to gain a reputation for "modernity" and innovation in certain quarters of the legal profession: it requires the absorption, with an unwonted suddeness, of novel doctrines of philosophy thirty years *after* they have been discredited in the schools of philosophy. Long after the doctrines of "logical positivism" have lost their adherents in the academies, the discovery of these doctrines by Justice Harlan has been taken by many lawyers as a revolution in the law. The experience may merely remind us of the distance that has separated the schools of law from the discipline of philosophy, and it may confirm what has often been suspected: that much of what passes these days as jurisprudence is really nothing more than third-rate philosophy.

At the risk of oversimplification it may suffice here to say that the "logical positivists" were disposed to argue, with Justice Harlan, that statements which conveyed moral judgments were ultimately dependent on nothing more than subjective feelings or personal beliefs, and therefore they could not be reckoned as true or false in any strict sense. At most they were emotive statements that conveyed a sense of likes and dislikes. And so if someone condemned the use of narcotics, all one could say is that he "disliked" the use of narcotics (much in the way, Mr. David Hamil says, that the residents of Skokie "dislike" the Nazis). One could not prove, in this view, that it is ultimately "right" or "wrong" to use narcotics (or to "dislike" the Nazis), any more than it is right or wrong say, to like parsley.

But as the linguists would explain, the meaning of words cannot be as subjective and arbitrary as that. Moral terms have the function of commending and condemning, approving and rejecting, and they cannot play the role they do in our language—they cannot initiate a process of reasoned discourse over moral judgments—unless the people who use these words understand, when they use them, that they are condemning or commending a course of action to others. For that to be so, the words that serve the function of commending and condemning must be established rather plainly in common usage. The meaning of words, of course, may alter over time, and many pejorative terms, like "robber" or "thief," may be uttered in jest, or in circumstances that render their meaning innocent. But at any given moment, anyone who lives with a language every day must have a fairly reliable sense of the words that are fixed very clearly in the language as terms of insult and defamation, and the expressions that may be on the borderline between derision and neutrality.

If there is any lingering dispcsition to believe that offensive words or verbal assaults are entirely subjective in character, one need only apply this simple test: Ten years ago Governor George Romney was running in the presidential primary in New Hampshire, and in the heat of the campaign he referred to Senator Percy of Illinois as an "opportunist." When Percy took offense Romney sought to repair the damage. He explained that, when he called Percy an "opportunist" he simply meant that Percy was an intelligent man who took advantage of his opportunities. That is to say, he was merely "describing" Percy rather than judging him, and if anything, he suggested, his remark should have been taken as a compliment: he was actually commending Percy for alertness in rising to opportunities.

The measure of one's willingness to believe, with Justice Harlan, that expressions of insult or defamation depend on nothing more than the subjective feelings of the people who hear them, is one's willingness to believe Romney's account of what he meant.

These understandings were part of the perspective that was bound up with the *Chaplinsky* case, and the question again is, Where does that case now stand in our law? Two years after Justice Harlan's opinion in *Cohen* v. *California*, the Supreme Court confirmed a wide latitude of power to local governments in the regulation of obscenity. The Court invoked the *Chaplinsky* case as the foundation for its judgment in *Paris Adult Theatre* v. *Slaton*, and, in his opinion for the majority, Chief Justice Burger made it apparent that the invocation was more than a ritualistic exercise. Burger's substantive comments on the case followed the logic of the understanding in *Chaplinsky*, and indeed he seemed intent on pressing the point that the logic of *Chaplinsky* simply could not be displaced from the law: for the benefit, apparently, of some of his colleagues, the Chief Justice observed that the "live" performance of a man and woman locked in a sexual embrace at high noon in Times Square [would not be] protected by the Constitution because they simultaneously engaged in a valid political dialogue." The Chief Justice surely must have known that, within the terms of Harlan's opinion in *Cohen* v. *California*, there would have been no basis on which to restrain an act of this kind.

Yet the law should be obliged to restrain this "expression," and it is Justice Murphy's opinion in *Chaplinsky* that explains, far more persuasively than anything else, the grounds on which the law may be exercised in this case. The couple could be restrained from their public gesture without interfering in any degree with their freedom to make any substantive arguments about the issues of the day. And because their sexual demonstration is not strictly necessary to "the exposition of ideas," the government might well be justified in acting out of a concern for the sensibilities of other people in a public place.

It would take a complicated argument, however, to explain just why a public display of sexual intercourse should be taken as an injury or offense to the public. The argument could be made, but it would be far more difficult than the argument that is needed to explain why Nazism is a wrong and why the presence of the Nazis in Skokie inflicts injuries. The wrongness of Nazism is of course separate from the palpable injuries that the American Nazis foster with their presence in the streets; but those injuries are clearly present.

A Supreme Court that knows why the couple may be restrained should be able to explain also why the Nazis may be restrained. The only question is whether the Court is prepared to overcome its recent distractions and admit to itself more fully that the teaching of *Chaplinsky* cannot be effaced in any society that would preserve the integrity of its public discourse and preserve itself beyond everything else, as a decent society.

For years, the ACLU has professed to believe, with Justice Holmes, that "the best test of truth is the power of the thought to get itself accepted in the competition of the market."[1] With all proper allowances for that curious proposition, one may still ask: What unresolved issue in the marketplace of ideas may the Nazis help to settle for us? In the judgment of the ACLU, is there something in the perspective of the Nazis which has a plausible claim to truth? If we restrict the speech of the Nazis is it conceivable that we may shield ourselves from ideas that may turn out one day to be valid? Is it possible, for example, that a convincing case could yet be made for genocide if people were given a bit more time to develop the argument? Might it be that the commitment to a democratic regime itself stands on premises that may be shown one day to be doubtful?

These possibilities could not be ruled out if, in fact, all judgments of moral right and wrong rested on nothing more than "opinion." But the wrongness of genocide arises from the concept of morals itself, and therefore no amount of discussion, now or in the future, could possibly have any effect on its moral status. The wrongness of the act inheres in the willingness to put to death a whole group of people with no reference to criminal acts, with no discriminations to be made between the innocent and the guilty. Genocide will continue to be wrong as long as the notion of morals itself exists—as long as it is possible to speak of the difference between innocence and guilt, of the difference between killings that are justified and those the are unjustified.

In the meantime, however, the ACLU is helping to preserve the Nazis as an estab-

[1] The self-contradictions contained in this proposition have been dealt with quite well by Walter Berns in "The First Amendment and the Future of American Democracy" (Basic Books, 1976).

lished part of the public arena, and the public lessons that are drawn from the experiences are not apt to be wholesome. If the ACLU bends its efforts, after all, to support a right of the Nazis to march, what other lesson does it hope to teach but that the Nazis must be regarded as legitimate—that their claim to exist and speak stands on the same plane of legitimacy as that of any other group within the country. But if the Nazis are legitimate, they cannot be dismissed out of hand as implausible, and if the perspective they represent is regarded as plausible, then the self-evident "truth" on which the American regime is founded cannot in fact be a "truth." It must be merely an "opinion," no more or less likely to be true than any other "opinion" about the nature of a good political regime, including the "opinion" represented by the Nazis.

But the consequence that arises from this understanding was set forth long ago by Lincoln: If democracy were not founded on a natural truth—on the capacity of human beings for moral judgment—then it had to be founded merely on "opinion": it had to arise merely because it was the form of government that happened to be approved by the opinions of a majority. And if the opinions of the majority were the only authoritative source of law, there could be no ground on which one could challenge the decisions of a majority in the name of a more fundamental law. It would be within the competence of a majority, then, to forgo democratic government for the entire society or to withdraw the protections of the Constitution from any minority. The irony is that the ACLU sees itself as defending at this moment the freedom of a minority, but the principles on which it mounts that defense would cut the ground out from under constitutional government itself and, in that sense, would also imperil the freedom of all minorities.

Nearly two hundred years ago, when a current of calumnies directed at Catholics was running through England, Edmund Burke observed that "if it exists at all [in Bristol, the city he represented], the laws have crushed its exertions, and our morals have shamed its appearance in daylight." Burke spoke here out of a tradition that regarded the injuries inflicted through speech and expression as a species of injustice and the law was obliged to restrain. But he also understood the connection between the law and the climate of opinion that could support the law and render its strenuous exercise less necessary. As the ACLU seeks now to resist the use of the law in restraining acts of assault and intimidation, it is also seeking to alter in a radical way the understanding of the public about the foundations on which its own freedom is established. The result of this teaching, however, is to render those foundations less firm, the measure of the difference between our age and Burke's is that the lawyers and professionals who have borne the largest responsibility for the preservation of constitutional government no longer seem to understand the moral premises on which that government rests.●

ENHANCING FBI EFFECTIVENESS

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mrs. HECKLER. Mr. Speaker, at the annual meeting of the Chamber of Commerce of the United States, I had the honor this morning of taking part in a prayer breakfast that included a message delivered by the newly appointed Director of the Federal Bureau of Investigation, Mr. William H. Webster, whose discussion of American religious principles was deeply moving and inspiring.

At the conclusion of the breakfast, FBI Director Webster was presented with a tribute from the U.S. Chamber of Commerce. I would like to bring this tribute to the attention of my colleagues. The text follows:

TRIBUTE TO THE FEDERAL BUREAU OF INVESTIGATION

Public statement supported by the delegates attending the 66th annual meeting of the Chamber of Commerce of the United States, May 2, 1978.

"Delegates to the 66th annual meeting of the Chamber of Commerce of the United States strongly urge the Carter Administration and the Congress to resist efforts to politicize the FBI and to avoid making it a public scapegoat or otherwise weaken this institution, which is so vital to the protection of our system of government and a way of life.

"Over the years, the FBI has undertaken the responsibility of protecting our national security in order to assure the rights of all citizens.

"We must be vigilant to ensure that transitory political events do nothing to undermine the FBI strengths or effectiveness. We applaud FBI agents and their devotion to duty, even under criticism and salute their long record of distinguished service and urge their continued dedication to the protection of individual rights and our free society." ●

U.S. OIL DRILLING EQUIPMENT TO RED CHINESE

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. ASHBROOK. Mr. Speaker, the United States is continuing to export its vital technology to the Communist world. The latest transaction is with Red China.

According to the Washington Post, the Peking regime has purchased the largest piece of oil drilling equipment it has ever brought from an American firm. The sale, estimated at $25 million, was of a jackup offshore oil rig. The rig is currently under construction in Singapore by a company 70 percent owned by Bethlehem Steel.

The new equipment is suitable for drilling in up to 250 feet of water. A special feature is its legs which, resting on an A-shaped steel mat, permit it to be used in areas where other oil rigs would sink into soft sand sea bottoms.

Other U.S. oil rig building companies are now trying to get into the act. Livenston Shipyards of Orange, Tex., has reportedly sent representatives to Peking to resume negotiations on purchase of more jackup rigs.

The sale of our most sophisticated technology to Communist nations is impossible to justify. It only adds to their growing military might. The real winner in this transaction is Red China, not the United States.●

WATER CONSERVATION

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. EDWARDS of California. Mr. Speaker, on Friday, April 28, 22 of my California colleagues and I sent a letter to President Carter urging him to include water conservation as the key concept in our national water policy. The Western States have recently completed one of the worst droughts in recorded history. While water conservation must remain an important aspect in water utilization in the Western States, it must also become a key ingredient of water usage in the eastern section of the United States.

The time has come for all Members of Congress to join together in supporting the President's efforts to emphasize the necessity of water conservation in the daily lives of all Americans.

For the record, I have included the text of the letter which was sent to President Carter. I have also inserted a news article which appeared in the May 1978 issue of Consumer Report entitled, "Water: Time to Start Saving?" I am sure all my colleagues will be interested in reading about the changes which have occurred in northern California with regard to water conservation practices.

HOUSE OF REPRESENTATIVES,
Washington, D.C., April 26, 1978.

JIMMY CARTER,
The President, The White House, Pennsylvania Avenue, NW, Washington, D.C.

DEAR MR. PRESIDENT: In your announcement of the review of the National Water Policy, you stated clearly and correctly that water conservation must be the cornerstone for future water resource development planning.

As you know, California has recently begun to recover from its extended drought. During that time though, many eyes were opened with regard to preserving this precious national resource—water. We urge you to include water conservation as the key concept in our National Water Policy. Like energy, we must work together to best utilize this limited resource.

We, the undersigned California Representatives, encourage long-term water conservation as the keystone to a comprehensive Federal Water Management Program.

With kindest regards.

Sincerely,

Don Edwards, George E. Brown, John Moss, Ronald V. Dellums, George Danielson, Charles E. Wiggins, Edward R. Roybal, Bob Wilson, Del Clawson, James Corman, Fortney "Pete" Stark, George Miller, Anthony Beilenson, Pete McCloskey, Mark W. Hannaford, Leon Panetta, Phillip Burton, Don Clausen, John L. Burton, Carlos J. Moorhead, Norman Y. Mineta, Jerry M. Patterson, and Augustus F. Hawkins.

[From Consumer Reports, May 1978]

WATER: TIME TO START SAVING?

Newspaper accounts told the story: "Reservoir levels falling again." "First violator of ban on swimming pools pleads guilty." "Many sends letters of advice to city officials on saving water." Those reports might have appeared last year in California, but they didn't. They date back to 1965, when a

drought threatened New York City's water supply.

As New Yorkers learned then, and as Californians found out two years ago, a water shortage can hit anywhere and at any time. But the lesson rarely sticks. Most people think about water only when a drought threatens to make the taps run dry. For the most part, water has always been considered a free resource of unlimited availability in this country—an attitude that might have made sense years ago, but one we can't afford today.

Environmental considerations now restrict the building of new dams; the cost of new reservoirs and sewage treatment plants are increasing rapidly; and the population is shifting to the Sunbelt states, where water is scarcer. According to the Water Resources Council, an independent Federal agency, there could be "critical" water problems between now and the year 2000 in Arizona, California (again), Florida, Kansas, Nebraska, Nevada, New Mexico, Utah, Wyoming, and parts of the Pacific Northwest.

The nation's view of water as an unlimited resource is changing—but slowly. A few areas not normally associated with shortages are becoming more careful about water usage. Near Washington, D.C., for example, the Washington Suburban Sanitary Commission has been promoting voluntary water conservation for several years and recently introduced a new rate schedule designed to hold down consumption. In New York, the Long Island Lighting Co. has sent shower flow restrictors to its 800,000 residential customers, a step intended to reduce both water use and the demand for fuel to heat water. And some local plumbing codes are being changed to require the use of water-conserving toilets, faucets, and showers in new or remodeled homes.

WHY CONSERVATION MATTERS

Though it's difficult to measure the nation's water usage precisely, one estimate put total water consumption in 1975 at 106.6 billion gallons per day. Of that amount, city and rural domestic water supplies took just 6.3 billion gallons, while 86.4 billion gallons went for agriculture, largely for irrigation. Those figures would seem to indicate that even a dramatic cut in water usage by households would add only a drop to the bucket of water available—or at most not more than a cup.

However, the statistics mask the fact that conserving household water can be beneficial in a number of ways that have nothing to do with your own utility bills. (If you conserve, you will save a little on your water bill, and, assuming you use less hot water, you could save quite a bit more on your gas or electric bill.)

An overall reduction in water use would mean that more homes could be built in a given area without adding new water supplies. That can be important because finding new water supplies and delivering the water to customers is expensive. In many areas, water is delivered to houses through costly pumping facilities; building new storage and distribution facilities for fresh water isn't cheap or easy, either. Those are costs everyone will pay, in one way or another.

In arid regions, where rainfall or ground water is insufficient to meet increased demand, there may soon be a need to use sea water—but removing the salt is an expensive and energy-intensive process. Finally, reducing water usage eases the load on sewage plants and moderates the cost of sewage treatment. Some people pay for both water and sewage treatment, and the cost of treating sewage is increasing along with the cost of fresh water.

"REASONABLE" OR WASTE WATER USE?

The current situation in Arizona shows clearly how a water crisis can develop unless people begin to use water more wisely. Tucson, for example, is filled with gurgling fountains, and residents there use hundreds of gallons of water each day to keep their lawns green. The state's golf courses each drink up about 160 million gallons of water a year.

Under Arizona law, ground water must be put to "reasonable" use, but no one has yet been able to establish a use that isn't reasonable. As one water official told CU: "If someone is willing to pay the cost of the water, the use has to be reasonable because he's paid for it."

Homes, farms, and businesses in Arizona draw some water from lakes, rivers, and the like, but much of the state's water supply comes from under the ground. The state's population more than doubled between 1950 and 1970, and may double again by 1990. All those new water-users are pumping water out of the ground at a furious rate. Each year, Arizonians are removing 715 billion more gallons of water than can be replaced by rainfall and other sources.

In Tucson, wells must be sunk 100 to 300 feet to strike water, even near stream beds. The water table in Tucson has been dropping more than 2.5 feet a year, on average, and as much as 12 feet in some areas. No one knows how long it will be financially feasible to keep pumping up ground water, or whether water quality will deteriorate as the wells go deeper and deeper.

In this situation, you might expect Arizonians to pay close attention to water conservation. Not so. Last year, the Tucson city council voted four to three to increase water rates. As a result, one of the four-member majority resigned from the council, and the other three were recalled by overwhelming votes.

Meanwhile, Arizona's water table continues to drop, causing the land to sink—with potentially disastrous results. As a report on Tucson's water situation noted: "Where the land subsides at uneven rates, fissures as much as three feet wide may develop, roadbeds may be offset, and water, sewer, and gas lines may be broken."

LIVING WITH LESS

Even though the recent drought in California involved nothing as catastrophic as gaping cracks in the earth, the situation was serious enough. To deal with the two-year-long shortage, California communities instituted strict rationing, and public consciousness about the need to save water became acute. As one San Francisco newspaper columnist wrote, "The horrow film of the year on TV was Hitchcock's old 'Psycho,' not because Janet Leigh was stabbed to death in the shower, but because she left the water running."

Marian County, an affluent suburban area across the Golden Gate Bridge from San Francisco, began a mandatory rationing program early in 1976. Car-washing was banned, along with such other wasteful practices as the use of sprinklers to water lawns and gardens. This limited program cut water usage by slightly more than 25 percent, but it became clear that the reservoirs could run dry by the end of 1977 unless stronger measures were taken.

The goal last year was to reduce water consumption by 57 percent. County water officials gave each customer an allotment of water, based on the number of people in the household. One person living alone, for example, would get 49 gallons per day; a family of three would get 129 gallons. (Before the drought, a three-person family used an average of 320 gallons a day.) To maintain those quotas, stiff new water rates were imposed. The basic rate was doubled; anyone who used up to twice the quota paid more than eight times the old rate, and usage beyond that cost 40 times the pre-drought rate.

The county also offered free water-saving kits, which included low-flow shower heads and bottles to put into toilet tanks. More than 90 percent of Marin water-users took the kits and, apparently, used them. In addition, people stopped running water when brushing their teeth, shaving, or soaping up in the shower. Vegetables were washed in a pan and the water reused; dishes were rinsed in a pan of clean water instead of under the faucet. Many people followed some extreme measures: They took buckets into the shower with them to catch "gray" water, which could then be used to flush toilets or to water gardens.

The result: Marin County residents reduced their water consumption by 65 percent last year. Only 5 percent of water-users, including many businesses that couldn't reduce their usage, exceeded their quotas.

AFTER THE DROUGHT: A GOOD OMEN

Once the drought ended, so did the water restrictions. California's water problems ended so dramatically that, over one weekend, an office in Sacramento changed its name from "Drought Information Center" to "Flood Control Center." However, many Californians seem to have retained their water-saving ways. In Marin County, for example, water consumption was still running 45 percent below pre-drought levels when this issue went to press.

The way Californians have incorporated the need to save water into their daily lives is a positive sign for conservation efforts elsewhere. It is possible to save water without sacrificing comfort or convenience, and at minimal expense.

The place to start is the bathroom, since bathing and toilet-flushing together account for nearly three-fourths of the water used inside the house. In the report that follows, we discuss an array of devices—both homemade and commercial—that should save water when the toilet is flushed. A companion report, beginning on page 300, rates a broad sampling of devices that allow you to shower with less water. ●

NEW FARM BILL BENEFITS SYNTHETICS EVEN MORE THAN COTTON

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. FINDLEY. Mr. Speaker, the Cotton Economic Review published by the Economic and Market Research Department of the National Cotton Council of America reported on April 28 that despite an increase in retail sales of 1.9 percent and an increase in personal income of 1.2 percent in March, U.S. mill consumption of cotton dropped 8.5 percent below the previous month and consumption for the first quarter of 1978 was running at a rate of 6.57 million bales compared to 6.8 million bales in 1977. For the quarter cotton's market share shows cotton losing competitively both in total markets share and in the staple sector.

The conference report we consider this week is good news for DuPont and Celanese as the effort to keep the cotton price loan at a minimum level or 48 cents per pound through 1981 gives these synthetic manufacturers the same floor for their polyester staple. Our purpose should not be to subsidize large multinational petrolchemical giants. We must

consider the full impact of the cotton section of the conference report. It simply will not benefit cotton in its battle with synthetic fibers and foreign produced cotton.

COTTON CONSUMPTION DECREASES

The details of National Cotton Council analysis of this situation show that:

U.S. mill cotton consumption (seasonally adjusted annual rate) slipped below 6.5 million bales in March compared with nearly 6.7 million in February. Cotton's market share recovered in March, however, to 26.9 percent of all fibers consumed and 43.5 percent of staple fibers. That compares with 25.5 and 41.5 percent of all fibers and staple fibers respectively in February.

For the full first quarter, cotton's annual rate of consumption was 6.57 million bales compared with 6.8 million a year earlier and 6.74 million the previous quarter. Quarterly market share results show cotton losing competitively both in the total market and in the staple sector. At 26.1 percent, cotton's share of all fibers consumed was 1.6 percentage points below its first quarter 1977 share and 1.2 points off the fourth quarter share. The appended table shows similar market share losses in the staple sector.

It is also instructive to look at consumption on the cotton system where cotton's closest—but certainly not its entire—competition occurs. Consumption of all fibers on the cotton system was virtually unchanged between March 1977 and March 1978. But cotton consumption dropped from a seasonally adjusted annual rate of 6.8 million bales a year ago to 6.57 million in 1978's first quarter. The result was a market share loss of 2.2 percentage points to 59.9 percent.

With eight months' data for the current season now in hand, USDA's devised U.S. mill consumption estimate of 6.7 million bales seems optimistic but, perhaps, attainable. The annual rate of consumption will have to average a much improved 6.85 million bales for the remaining 4 months to reach the estimate.

EXPORTS REMAIN STRONG

The Council analysis further shows that exports continue to be strong. Will this situation remain constant? Possibly not if the cotton loan departs from its relationship to the world price. We established the cotton loan as a percentage of world price starting with the Food and Agricultural Act of 1965, because we had a carryover of some 16 million bales of cotton at that time. We should not take the flexibility from the cotton loan formula. Farmers have enjoyed progressively increasing income since we made a turn toward a market orientation for cotton with the 1965 act, and which we continued with the acts of 1970, 1973, and 1977. A lack of flexibility could leave use with future excessive cotton production geared not to market, but to inflexibly high loan levels.

Let us stay with the existing cotton program which is providing cotton producers their income from the marketplace. The Council report on the healthy export situation states that:

Several recent developments related to the cotton export market suggest that U.S. cotton export activities will continue at a relatively lively pace into the final quarter of the 1977–78 marketing year.

The official USDA export projection for this season was raised from 5.0 to 5.5 million bales;

Total export commitments for the season increased to 6.2 million bales as of April 16, the highest level since 1973–74;

Actual U.S. exports of cotton amounted to almost 704,000 running bales in March, the highest monthly total since March 1974;

The Census Bureau's report on cotton stocks indicated that nearly 1.1 million running bales were in process of moving from public storage warehouses to mills, ports and other shipping points at the end of March 1978.

The Council report notes the USDA attempt last month to reduce 1978 cotton plantings by making available payments to producers for not planting a certain percentage of their crop. The report states:

Since the Carter Administration outlined its new farm policy on March 30, several modifications have been announced that affect cotton:

(a) On April 6, Secretary Bergland revised the voluntary paid deversion program for cotton.. The change specified that, to be eligible for diversion payments, a farmer's planted acres in 1978 plus diverted areas could not be greater than his 1977 planted acres. (The initial announcement specified that 1978 planted acres could not exceed 1977 plantings.)

(b) On April 12, USDA instructed ASCS offices to approve voluntary diversion payments for cotton farmers who in compliance with the March 30 announcement had:

1. Filed an intention to participate in the upland cotton voluntary diversion program on a farm on which cotton in excess of 90.9 percent of the 1977 planted acreage had been planted prior to March 30, 1978, or

2. Planted an acreage of upland cotton of more than 90.9 percent but not in excess of the 1977 planted acreage, or

3. Took irreversible actions such as applying herbicide, fertilizer, etc. in preparation for planting an acreage of upland cotton of more than 90.9 percent but not in excess of the 1977 planting acreage. (Mere tillage of the land will not suffice.)

The Department has extended through May 15 the sign-up period for 1978 programs. The two-week extension was made because of program changes.

Following the April 12 instructions to ASCS offices, USDA noted certain abuses of the liberalized eligibility provisions and said it might be necessary to issue stricter guidelines. At press time, however, no new rules had been received by local ASCS offices.

Mr. Speaker, the report attempts to analyze this USDA action on 1978 planting intentions and concludes that:

1978 cotton acreage diversion program, as such is not expected to result in a reduction of as much as one-half million acres in actual plantings in 1978.

Keep in mind that the 10 percent increase in the loan rate from 44 to 48 cents per pound could spur additional loan plantings by producers with relatively low costs of production in the Southwest, particularly in the state of Texas which has the highest level of production equalling almost 50 percent of production nationwide. Farmers have until May 15 to make their planting decisions.

Cotton producers sought the paid diversion program in order to cut back acreage and hopefully strengthen prices. Additional production encouraged by this arbitrary increase in the loan to a floor price of 48 cents will serve as a price depressant. Surely cotton farmers would not like to see such a turn of events.

Let us keep cotton competitive in U.S. and world markets in its battle with foreign produced cotton and synthetic fibers. We can continue to do so by defeating this conference report or by severing the cotton section from the report.●

INCOME REDISTRIBUTION AND CARTER ADMINISTRATION

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. HAGEDORN. Mr. Speaker, while it has not always been easy to identify common threads in the economic policies of the Carter administration, there does seem to be at least one discernible principle—an abiding belief in the rightness of income redistribution. The only apparent objective of many of its programs seems to be the transfer of income from those who have earned it to those who have not.

I would like to insert in the RECORD a short study by Roger Freeman and Alvin Rabushka of the Hoover Institution at Stanford University examining the redistributionist elements of the Carter program. They conclude that the policies of the administration will succeed only at the "expense of initiative, respect, and a healthy productive private enterprise economy."

INCOME REDISTRIBUTION EFFECTS OF PRESIDENT CARTER'S LEGISLATIVE PROPOSALS: AN OVERVIEW

During his presidential campaign Jimmy Carter was regarded a way-out liberal by some, a staunch conservative by others. On the whole, he managed to come closer than any of his competitors to being all things to all people. He declared his dedication to limited and smaller government and simultaneously espoused dozens of huge new or expanded social programs.

After a year in the Presidency, he still seems to be fighting on both sides of the ideological fence. In his State of the Union Message of January 19 he said: "We need to realize that there is a limit to the role and function of government. . . . Government cannot eliminate poverty, reduce inflation, save our cities, cure illiteracy, provide energy, or mandate goodness. . . . We should rely principally on the private sector to lead the economic expansion and to create new jobs for a growing labor force. . . ." No conservative could have said it better.

Then Mr. Carter proceeded to demand—as he had throughout the preceding 12 months—a series of programs to make Americans more dependent on a perpetually growing and more powerful government. In his campaign he promised to restrain governmental growth—but as one of his first acts as President boosted the Federal budget by $19 million.

In January 1978, President Carter declared, "I do not believe in wage and price controls," but he continued to insist on controlling prices of domestic natural gas and crude oil.

U.S. News & World Report on October 17, 1977 wrote: "After almost nine months in one of the world's most visible jobs, Jimmy Carter remains as big a puzzle as ever in his own country and abroad. In fact, uncertainty about what makes the President tick, about his personal philosophy and about the goals of his administration may be even stronger

in some quarters than when he took office in January." A keen observer in the field of foreign policy exclaimed: "On Monday, Wednesday and Friday he is for the Arabs, on Tuesday, Thursday and Saturday for the Israelis, and on Sunday he goes to church."

However, if we eschew his rhetoric and submit his domestic programs to a close analysis of what they will do, rather than what they are supposed to do—we find Mr. Carter less of an enigma. A common denominator, a common threat, runs through most of his proposals on domestic affairs. It is sometimes explicit, more often implicit. It is the standard populist aim of redistributing income and wealth from those who earn it to those who yearn it, or, more specifically, from those who produce it to those who mean to consume it. It is a redistribution from producers to nonproducers, though sometimes only from those who produce more to those who produce less. This means that it is not always redistribution to those at the very bottom of the income scale.

In the United States, as in other industrial nations, the shape of income distribution has changed from a pyramid to a pear, with the great majority of the people not at the low end but toward the center. This means that the majority of the voters are not at the bottom end but closer to the middle. Thus more redistribution to the very poorest of families—though it may sound more compassionate and charitable—is no longer the definitive goal. There simply aren't enough votes at the bottom of the income scale.

What we see increasingly, is a middle class welfarism, a redistribution for the benefit of families just below or at the middle of the scale—financed by the most productive and dynamic elements in our society—those whose activity makes the difference between rapid economic growth and stagnation.

The goal of redistribution from the top is largely illusory—there is not enough money among the small group at the top to benefit significantly the far larger numbers below. Taxes which may seem to be paid by the rich, in the end will largely be borne by those in the middle. That satisfies the desire "to hit the man with the top hat" and provides the funds to make the recipients feel that they are getting something for nothing. Actually we have gone so far in this game that it is largely no longer a case of robbing Peter to pay Paul but of robbing Peter to pay Peter. It's done with mirrors. But done cleverly, it seems to pay off politically.

After all the income redistribution, the family in the middle—and that is the great majority—pays in the end for what it gets. For a hefty brokerage fee for its money's round trip to Washington, the family finds its actions and its decisions increasingly controlled by an ubiquitous and omnipotent Federal bureaucracy and judiciary elected by no one and responsible only to themselves.

Redistribution of income and property has in recent decades increasingly been viewed as a prime purpose and task of government. This, more than anything else, explains the spectacular growth in domestic public expenditures over the past quarter century. The absence of positive results does not seem to deter the enthusiasts of social engineering. As Ben Wattenberg and Richard Scammon expressed it, "The liberal battle cry has become 'We have failed; let us continue.'" (Commentary, April, 1973.)

The aim is to redistribute through the political process the rewards and punishments of the market. It is the goal of those who do not believe that an individual is entitled to the value of his product or service, who feel that the allocation of natural talent is basically unfair and must be compensated for in a more egalitarian direction. Since talent cannot be redistributed among persons, at least the product of such talent and effort should be.

Historically much of the redistribution of property, between nations and within nations, has been accomplished by violence—robbery, revolution or war. Progressive taxation and social spending through cash transfers and public programs appear now to have become a more popular and more widely used method of achieving by the legislative process what previously could be obtained only by individual productive effort or through dispossession by force. It amounts to winning at the voting booth what was not achieved by blood, sweat and tears.

TRENDS IN INCOME DISTRIBUTION

Four major points need to be made about the nature of income redistribution in the United States in the past quarter century.

First, the number of persons below the poverty level in the United States has dropped from 40 million to 24 million since 1959, cutting its percentage of the general population in half, from 22.4 percent to 11.4 percent.* This trend was considerably influenced by the expansion of income maintenance programs.

Second, shares in the aggregate income by quintiles have changed only at the top and bottom end over the past quarter century. The share of the lowest one-fifth of families went up from 4.5 percent in 1950 to 5.4 percent in 1975 (20 percent growth) and the share of the highest one-fifth of families declined from 42.7 percent of pre-tax income in 1950 to 41.1 percent in 1975 (a 4 percent drop). The second, third and fourth quintiles remained stable.

Third, significant changes have taken place between the major economic sectors (see Table I). The share of owners—from dividends, business proprietorship and rental—dropped sharply by more than half over the past 27 years, while the share of labor slightly increased (the increase was reduced by larger Social Security contributions). Most of the gain was in transfer payments and personal interest (due to growth in savings and interest rates). This amounts to a major income shift from producers to nonproducers.

TABLE I.—DISTRIBUTION OF PERSONAL INCOME IN THE UNITED STATES, BY MAJOR SECTORS, 1950 AND 1977

[In percent]

Economic sector	1950	1977	Increase	Decrease
Labor	66.7	70.2	3.5	
Social security contributions	−1.3	−4.0	−2.7	
Net labor income	65.4	66.2	.8	
Corporate dividends	3.9	2.7		1.2
Proprietors	17.0	6.4		10.6
Rental income	3.1	1.6		1.5
Total ownership	24.0	10.7		13.3
Transfer payments	6.7	13.5	6.8	
Personal interest	3.9	9.6	5.7	
Grand total	100.0	100.0	13.3	13.3

Source: Economic Report of the President, 1978.

*Based on Census Bureau data for 1959 (earliest year) to 1975 (latest year), P–60 #108. There are presently no reliable statistics available on income distribution in the United States. Annual and periodic sample surveys by the Census Bureau include only money income (not income in kind, such as food stamps, medical & housing benefits, etc.) and aggregate between ⅔ and ¾ of such income according to National Income and Product accounts, thus leaving a wide gap. No size distribution of Personal Income has been available since 1964. The data given are the best available, but should be taken with a grain of salt.

And fourth, there has been a dramatic shift of income from ownership to employee compensation since 1950 with the share of ownership—corporate profits, proprietorship, rental income—cut to half. This is indicated by the distribution of national income (which does not include transfer payments):

TABLE II.—DISTRIBUTION OF NATIONAL INCOME IN THE UNITED STATES BY MAJOR SECTORS, 1950 AND 1977

[In percent]

Economic sector	1950	1977	Increase	Decrease
Employee compensation	65.5	76.1	10.6	
Corporate profits	14.3	9.2		5.1
Proprietors	16.3	6.4		9.9
Rental income	2.9	1.7		1.2
Total ownership	33.5	17.3		16.2
Net interest	1.0	6.6	5.6	
Grand total	100.0	100.0	16.2	16.2

Source: Economic Report of the President, 1978.

The nature and strength of economic and political forces at work give no indication that the trends in distributive changes over the past quarter century will alter significantly in the immediate future. Goals and legislative proposals of the Carter Administration will, if enacted, in all likelihood tend to shift income from higher to lower income recipients, though not necessarily to the lowest income group, as demonstrated in the various analyses that follow.

CARTER PROMISES AND PROPOSALS

In March 1977 the White House released a 111-page compilation of about 600 promises made by Mr. Carter during his presidential campaign. Some of those promises have since been translated into legislative proposals to the Congress or other types of action, some have quietly been dropped, some are inconsistent with others and may never again see the light of day, and the remainder remain in limbo.

On December 17, 1977, the White House released a summary and outline of the President's domestic legislative activities for the first year of his administration. Major proposals on the list include energy, welfare reform, Social Security refinancing, and economic recovery—the "stimulus package." On January 21, 1978, Mr. Carter added to this list as he sent his tax message to the Congress.

Most governmental actions have the potential of affecting income distribution in one way or another, and President Carter's proposals are no exception. The object of this report is to consider the President's major proposals which either explicitly aim at redistributing income or, though not so intended, bring about major shfits in income from some persons to others, from one region of the country to another, from producers of some goods and services to the producers of others, and so forth. The report analyzes the redistributive effects of Mr. Carter's major proposals for a national energy plan, welfare reform, tax reform, and refinancing of Social Security. Substantial evidence is available with which to discuss income redistribution in each of these policy areas.

INCOME REDISTRIBUTIVE EFFECTS OF PRESIDENT CARTER'S LEGISLATIVE PROPOSALS

The overall result of Mr. Carter's proposals in these areas would be to engender massive and explicit redistribution of income from the top two or three quintiles of families ranked by money income to the bottom two quintiles—away from the more productive to the less productive members of society. Our findings can be summarized as follows.

ENERGY

1. Rebates of the crude oil wellhead tax, the tax on gas guzzlers and the standby gasoline tax, coupled with continued and expanded price controls on natural gas, constitute an explicit redistribution of income from the top three quintiles of families ranked by money to the bottom two quintiles.

2. If passed intact, the program represents a massive tax increase for the average American family and real incomes will suffer as inflation pushes taxpayers into higher tax brackets—the full package of energy taxes is estimated to cost a total of $377 billion over the next eight years ($5,390 for the average American family), which makes the Carter energy program the most significant increase in the middle-class American's tax burden in the nation's history, far exceeding the $277 billion increase in new Social Security taxes.

3. Carter's energy plan will also transfer income from rural to big-city areas, from the Western and Southern regions to the Northeast, and from the producers and users of oil to the producers and users of coal.

4. The Carter energy plan also entails massive capital requirements that cannot be met without contributing to rising interest rates, a loss in real GNP, higher rates of unemployment, and an increase in inflation.

WELFARE REFORM

That something needs to be done to correct severe shortcomings in our welfare system has long been widely recognized though views differ sharply on the changes that ought to be made. Mr. Carter acidly denounced current public welfare during his campaign and after assuming office and pledged a complete overhaul. In August 1977 he submitted proposals to replace existing programs of AFDC, SSI, Food Stamps and General Assistance with a program called Better Jobs and Income (BJAI).

BJAI consists basically of a plan guaranteeing to all persons a nationwide minimum income—amounting to $4,200 for a family of four—with Federally subsidized state supplements. It resembles the Family Assistance Plan considered by Congress from 1969 to 1972 and finally rejected. We find the effects of adoption of BJAI likely to be as follows:

1. Coverage and costs would increase. The Congressional Budget Office (CBO) estimated that the number of families receiving cash assistance would increase by about 50 percent in the first year of full operation, the equivalent of about 22 million persons. CBO also upped the Administration estimate of a net additional cost of $2.8 billion in the first year to $14 billion. Even that total could understate the final cost substantially.

2. About three-fourths of the additional recipient families would be in the pre-welfare income class from $10,000 on up and about three-fourths of the funds would go to famililes above the poverty level.

3. With most families at the lowest income level already on welfare, most of the newly added recipients would be in somewhat higher income brackets. BJAI would establish Federally financed middle class welfarism.

4. Mr. Carter called BJAI a "job-oriented program" in the expectation that many recipients would seek and obtain partial or full self-support through gainful employment. As an incentive, recipients would be permitted to keep half their earnings in addition to their welfare benefits. For the first time employed persons, the "working poor," would be entitled to a supplemental income.

5. There is a serious question whether BJAI would in the end increase employment or would mostly boost welfare rolls far beyond anything we have yet seen. Although recipients deemed able to work would be required to seek employment, experience over the past 15 years makes it very doubtful that this could be effectively enforced. To provide job openings, a Federally financed public service employment program for up to 1.4 million persons would be established. It is, however, questionable whether the openings would, in the long run, really be additional jobs. State and local governments might use those workers in lieu of unsubsidized employees they otherwise would have hired. The effect of these steps would be to make public assistance benefits available to millions of families above poverty levels, closer to middle income groups.

TAX REFORM

On January 21, 1978, President Carter transmitted his long promised Tax Message to the Congress. It would, according to Treasury estimates, reduce some income tax liabilities by about $34 billion and raise others through so-called reforms by $9 billion, for a net cut of $25 billion. It is purely conjectural whether these actions would, in the aggregate, offset boosts in Social Security taxes and proposed energy taxes, as well as increased revenues resulting from the effectively higher tax rates caused by inflation. If we had to make an estimate at this time, we would expect the proposed cuts to amount to no more, and possibly to less, than the probable increases. We have examined more closely other results of Mr. Carter's proposal.

1. The size of the combined tax boosts and cuts would be less significant than their nature, their effect on income distribution. The changes enacted in Social Security will place a heavy additional burden on persons in the upper two income quintiles, the proposed "tax reform" will raise the burden mostly in the upper half of the range, while the cuts are concentrated largely in the two lower income quintiles. This would also be true of the energy taxes if Mr. Carter's recommendations were enacted.

In other words, the multiple tax boosts and cuts will not offset each other in their impact on income redistribution but be additive: they will make the tax system substantially more progressive than it now is.

2. Mr. Carter has called the tax system "just a welfare program for the rich." This, despite the fact that the top 10 percent of the taxpayers now pay about half of all income taxes and that more than half of all personal income in the United States goes untaxed, with most of the $600+ billion of taxfree income located in the low and lower-middle income brackets.

The rate reductions which Mr. Carter proposed—and which account for most of the cut in his plan—would lower tax liability 14.3 percent in the lowest income bracket, 2.9 percent in the top bracket.

His change of the current $750 personal exemption (plus 2 percent credit up to $9,000 taxable income) to a $240 tax credit would shift $4 to 5 billion in taxes from the lower half of the income scale to the upper half. Other tax boosts, mislabeled "tax reform," ranging from deductions for business meals to minimum tax and foreign operations, would directly affect mostly persons with above average income.

A reduction in the corporate tax rate from 48 percent to 44 percent would be offset for many taxpayers by the tightening of provisions for building depreciation, bad debt reserves, etc.

Many of those "reforms" would be economically detrimental. They may be based on political arithmetic which tells us that in 1974 ten times as many returns were filed with income under $12,000 than with income above $25,000.

SOCIAL SECURITY REFORM

We cannot assess the redistributional impact of Mr. Carter's proposals without viewing recent changes for financing the Social Security system.

Action in Social Security was made imperative by the generosity of earlier Congresses which had raised benefits to a level where expenditures exceeded income substantially and the system would have faced bankruptcy within a few years. The 95th Congress resolved the fiscal problem by boosting Social Security taxes and the political problem by placing most of the additional burden on persons in high earnings brackets. Since the passage of the Social Security amendments in December 1977, no formal major Administration proposals regarding Social Security have been submitted.

The Social Security tax increases amounted to the biggest peace time tax boost ever, adding $227 billion to the nation's tax bill over the next 10 years. The Social Security tax rate on both employers and employees was raised from 5.85 percent in 1977 to 7.15 percent by 1987, slightly above the previously scheduled rate of 6.45 percent. The Social Security tax bill of all employees and employers will thereby go up 11 percent over the previously scheduled rise, 22 percent over the tax levied in 1977, a comparatively modest increase.

However, the maximum wage base upon which the tax is imposed was boosted from $16,500 in 1977 to $42,600 in 1987, an increase of 158 percent. This means that workers with earnings up to $16,500 will have their Social Security tax bill boosted by 22 percent, at $28,000 more than doubled, at $42,000 more than tripled. This probably is the most powerful peacetime boost ever in tax progressivity and in related income redistribution. Because Social Security benefits are weighted heavily in favor of low-wage workers, the taxpayers who bear most of the additional burden will get little in return.

Congress rejected two major Social Security proposals by the Carter Administration: one would have levied Social Security taxes on a higher maximum wage base on employers than on employees, and, in fact, abolished the maximum altogether for employers by 1981. On its face, and in the short run, this would have substantially boosted taxes on business and on persons in high income brackets. In the long run, however, the business tax increase would probably have been passed on largely to consumers in the form of high prices and partially back to employees in the form of smaller wage increases. It was obviously intended to make it appear that this scheme would "protect" the average worker and place the burden on big business.

The other change proposed by Mr. Carter was to use general revenue funds for Social Security purposes. Since the budget is in a heavy deficit situation this would have amounted to giving inflation another push upward.

CONCLUSIONS

One clear commitment is prominent in President Carter's policy preferences in proposals having fiscal implications: the commitment to redistribute incomes.

In every instance of the four major policy areas we examined—energy, taxation, Social Security, and welfare—Carter's policy preferences indicate this bias. The effect of adopting all of his proposals would be brutally cumulative. The final result would be a massive and explicit redistribution of income from the top two or three quintiles of families ranked by money income to the bottom two quintiles.

We were not really surprised to find this populist bias. We were surprised, however, to find so prominent another redistributive bias: a transfer of more monies to people not considered among the very poor. President Carter would commit the United States to middle class welfarism.

The mysticism of rhetoric, removed from reality, seems to be leading Mr. Carter to be-

lieve that there are vast untapped sources among the "rich" to distribute effectively to the "poor." The reality is that he wants to tap the earnings of the middle class to extend welfarism not only to the very poor, who are declining proportionately, but to a larger segment of the middle class itself. As we said earlier, he means to rob Peter to pay Peter.

The result will be a major income shift from relatively high producers to relatively low producers and non-producers, from earners to yearners. The process will result in more jobs—jobs in government agencies. The victims will be ourselves, a shrinking productivity, and a shrinking private sector.

Finally, while there is little serious opposition these days to the notion of progressive income taxation, President Carter's proposals would strain this concept to destructive limits—at the expense of initiative, self-respect, and a health productive private enterprise economy.●

ASBESTOS EXPOSURE

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. ANDERSON of California. Mr. Speaker, last week's announcement by HEW Secretary Joseph Califano regarding the threat of asbestos-related disease among American shipyard workers was a positive step toward recognition of a serious health problem. Since the Long Beach Naval Shipyard is in the congressional district I represent, I have been extremely concerned about the possible threat posed to workers there by past and present exposure to asbestos.

According to the Secretary, as many as 5.6 million Americans may die of diseases brought on by asbestos exposure. That figure is shocking enough. What is not demonstrated by that figure is the debilitating nature of asbestosis to the individual, the limitations imposed by the nature and symptoms of the disease. Physical activity is sharply reduced simply because the individual can no longer breathe efficiently.

In June, 1977, 501 workers at the Long Beach Naval Shipyard underwent chest X-rays and examinations during a medical survey. Over 30 percent of those examined were found to have asbestos-related lung abnormalities, despite the fact that they had received, for the most part, short-term exposure.

Because asbestos contamination takes anywhere from 15 to 35 years to manifest itself, those now suffering from exposure reflect the conditions found at shipyards in past years. Certainly, those conditions have improved as the Government has recognized the health threat posed by asbestos. Yet the fact remains that asbestos exposure is still a threat in the shipbuilding and repair industry, including our own naval shipyards.

Asbestos containing insulating material is still found on many of our naval vessels. During the regular 5 year overhaul, only the material directly over the work area is removed as a general practice. Thus, fibrous asbestos dust is released into the atmosphere, and remains a threat to many workers.

The danger is not limited to the asbestos workers—those who work with the material, and are trained to recognize the dangers involved. Other workers in the shipyards are also exposed to the dust, as is anyone near the area where the work is being conducted. Members of the worker's immediate families can be exposed through the dust carried home in the employees' clothing.

The chances an individual has in contacting asbestosis or related diseases is greatly increased by smoking, and that is a factor which must be dealt with in any program designed to curb this problem. Nevertheless, asbestos contamination is in itself a dangerous problem that we must be prepared to deal with on a separate basis.

The Secretary's announcement last week was a positive step toward dealing with this issue. The Surgeon General of the United States plans to alert the medical community to what will hopefully be a growing concern with asbestos contamination. Currently, I am informed that only 50 individuals in this Nation are qualified to read an X-ray for possible asbestos contamination. Obviously, there is a tremendous need to train more individuals in this area.

Several programs now exist to deal with the health threat of asbestos, and more are needed. The Federal Government must play a greater role in future efforts—the tremendous scale of the problem and its nationwide importance demonstrate this. More importantly, we should be prepared to take positive steps toward ending the threat of asbestos exposure to our shipyard workers immediately.

We have contacted the Department of the Navy and asked for a report on the cost-effectiveness of complete asbestos removal during overhaul instead of partial removal, to see if it could be made a regular procedure at our naval shipyards. This is one of a number of recommendations made by the Asbestos Workers Union at the Long Beach Naval Shipyard. Their efforts to meet this problem should be commended, and I feel that the proposals they have made deserve careful consideration.

The proposals follow:

RECOMMENDATIONS FOR DEPARTMENT OF DEFENSE ADOPTION

1. Removal of all asbestos containing materials from ships prior to regular overhaul period.

At the present time, asbestos containing materials are removed in a piece-meal manner as necessary for maintenance and repair of valves, boilers, pumps, etc. While the replacement material in these areas is asbestos free, there still remains the deteriorated and potentially hazardous material in the immediate adjacent areas, thus unnecessarily exposing ships company and civilian personnel to its carcinogenic effects. Implementation of this proposal would result in an increased immediate cost of approximately 35 percent over present methods for insulation removal and repair. However, an estimated savings of 200 million per year (15 years after implementation) would be realized because of elimination of environmental pay, compensation claims, and insurance premiums, not to mention the monetary value placed on human suffering.

2. Immediate and mandatory compliance with existing rules and regulations regarding asbestos control.

Until recommendation No. 1 can be implemented, an enforcement mechanism must be established with authorization and power to assure compliance with applicable laws and regulations. Presently, enforcement of these regulations is the responsibility of "staff" personnel (advisory only).

In order to assure strict compliance with the established guidelines pertaining to asbestos control, the enforcement mechanism or agency must have "line" authority.

3. All asbestos free material be color coded.

Adoption of this recommendation will assure the easy identification of material composition being handled, and eliminate the costly and time consuming methods required at present for non-identifiable material.

Existing material in stock could be easily color coded at the installing agency. Only pre-color coded material would be purchased for future installation.

4. All asbestos removal will be done at time periods with least possible exposure to all allied crafts and ships company.

The establishment of swing shift as the "removal" shift, would allow the monitoring and certification procedures to be accomplished on the graveyard shift, thus eliminating the "downtime" currently experienced at the beginning of the day shift while these procedures are performed.

5. All asbestos removal be accomplished with trained personnel.

Removal of existing asbestos-laden materials will be performed only by those shipyard personnel certified and classified as insulators under naval standards.

In the event of a work overload necessitating "contracting-out" asbestos removal, it shall be mandatory to use licensed insulation contractors with a background in the industry using recognized asbestos workers with a knowledge of existing state and federal laws, strictly adhering to those laws. the implementation of the latter would insure against unnecessary exposure of ships company and unknowledgeable neophytes.

Unless action is taken now, the costs to the taxpayer will prove to be immense. Compensation claims alone for those workers already suffering from asbestos contamination will prove to be a major expense—but one which we will most certainly want to face as a responsibility. Continuing to allow asbestos exposure to affect employees at our naval shipyards is, in my opinion, a dangerous, irresponsible, and fiscally unsound policy. For if we choose to take no action at this point, we will simply have to pay an even higher price in compensation claims—and possibly in lawsuits—in the years ahead.

Further study is necessary to completely eliminate the asbestos problem at our naval shipyards and the private sector as well. But we must be prepared to take the actions available at the present time to meet the health hazards posed by asbestos contamination. The Congress must be prepared to act in an effective, prompt manner if legislation is needed, and the responsible agencies of the Federal Government must be ready to follow the steps being taken by the Secretary of Health, Education, and Welfare and the Surgeon General.

OSHA MAKES CHANGES

HON. DAVID E. BONIOR

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. BONIOR. Mr. Speaker, the following article appeared in the April 1978 issue of National Utility Contractor magazine. It shows the changes that the Occupational Safety and Health Administration has made in the last year and the improved reaction from businesses because of the more commonsense approach. Assistant Secretary of Labor for OSHA, Dr. Eula Bingham, has converted OSHA from an agency which concentrated its efforts on releasing pages and pages of regulations which did not deal with the major health dangers workers were exposed to, to an agency which concentrates on major health and safety dangers in the most dangerous industries. This changeover the last year has finally given workers the protection that they need and has reduced the opposition from the business community as evidenced by this article. Dr. Bingham should be congratulated for her efforts which have fulfilled much of the promise of the OSHA legislation which became law over 7 years ago. I hope that my colleagues will find this article as informative as I did:

[From the National Utility Contractor, April 1978]

OSHA—SEVEN YEARS LATER

(Irby L. McLane, Jr.)

The 29th of December, 1977 marked the end of the Occupational Safety and Health Act's seventh (7th) year of existence.

As contractors, suppliers, and in general, good businessmen, we are all interested in safe and healthy conditions in the work place, if for no other reason than a purely honest and selfish one, that being dollars and cents.

Accidents result in loss of available personnel and equipment, job slow downs, added administrative work loads, headaches and the aggravation that none of us need.

Safety is not new, nor is the Federal Government's involvement. According to government reports, the first major Federal legislation covering safety standards and inspection practices dates back to 1890, when such legislation was passed to cover the coal mining industry. Since that time, laws have been passed to cover other industries and trades, such as railroading and longshoring.

However, it was not until 1968, when President Johnson proposed what he called "the Nation's first comprehensive health and safety program to protect the worker on the job," that Congress seriously considered comprehensive Federal legislation on safety and health.

During the 90th Congress, such legislation was strenuously opposed, and the Administration's bill did not reach the floor of either the House or Senate. During the 91st and 92nd Congresses, both Houses held extensive hearings on such legislation. It was found that it would be highly impractical to write specific safety and health standards into the statute itself to cover all occupations, thereby resulting in the need to establish an agency to whom such authority could be delegated.

After extensive debate and compromise between President Nixon's Administration and Congressional Democrats, as well as the House and the Senate, both Houses approved the conference report in December, 1970. The bill was officially signed into law at a formal ceremony held in the Department of Labor on the 29th of December, 1970. At the signing ceremony the President alluded to the fact that "This Bill represents in its culmination, the American System at it's best."

However, according to the approved and adopted *Tenth Report by the Committee on Government Operations*, (Subject: Failure to Meet Commitments made in the Occupational Safety and Health Act—October, 1977) as forwarded to the Speaker of the House of Representatives the Honorable Thomas P. O'Neill, Jr. and the 95th Congress, it was stated, as many of us have felt for sometime, that OSHA has not been able to fill the bill.

The report, from which the background for this article was taken, states:

"Unfortunately, the implementation of the Occupational Safety and Health Act by the Department of Labor does not represent the American system at its best. The Department of Labor is severely criticized by management and labor alike for its administration of the Act. To the American public OSHA has become the symbol of bureaucratic bungling and the heavy hand of governmental intervention. To many, OSHA is a threat, to most it is a joke."

This comment is used only to show that our Government does monitor and police its agencies, and that the same committee in the same report made recommendations on how the present Administration can correct these past mistakes.

Earlier this year, Dr. Eula Bingham, the Assistant Secretary for OSHA, told the Manpower and Housing Sub-Committee (which has been conducting hearings over the past two years on how the Department of Labor has been administering the Occupational Safety and Health Act) of her plans to reorient the Agency towards serious hazards and toward giving greater attention to occupational health problems. Results as of this date would indicate that she has done exactly that.

She also told a group of representatives, of which our National Safety Committee Chairman (R. G. Griffith) was a member, of her intention to reorient OSHA's line of thinking to a more realistic and common sense approach towards the role that OSHA personnel should take in implementing the Act. Also, that OSHA would undergo some changes and get into the business at hand, that being to assure so far as possible, every working man and woman in the nation a safe and healthful work place, and to preserve our human resources. From all indications, Dr. Bingham and her Agency have taken great strides in this area.

OSHA has taken steps to encourage all States to develop and operate their own job safety and health programs. Any State desiring to assume such responsibility is required to submit such plans and details as to how they plan on providing a program that is at least as effective as the OSHA Act to OSHA for review and approval. If such plans are approved, OSHA pays up to 50% of the program's operational cost.

For your information, the following are operating under OSHA-approved State Plans, as of November 1, 1976:

Alaska, Arizona, California, Colorado, Connecticut, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, and Minnesota.

Nevada, New Mexico, North Carolina, Oregon, South Carolina, Tennessee, Utah (no consultation), Vermont, Virginia, Virgin Islands, Washington, and Wyoming.

There are a number of advantages to this type of program, such as having your inspection performed by personnel who relate more closely to your working conditions, weather, soil conditions, etc. If your state is not involved, you might want to get them involved.

Keep an open mind, and remember that any such policy is a two-way street. OSHA has had a Mad Bull by the tail. They jumped into a program without truly having good direction. Being understaffed, they transferred into OSHA personnel from other agencies and hired new people, of which many in both catagories were ill informed, improperly prepared, and just did not have the tools to do a good job. They have received a tremendous amount of criticism and ridicule of which they without a doubt have deserved.

However, now that they are attempting to take a more down to earth approach, and have come down off their big white charger, maybe we being conscientious and safety oriented businessmen and leaders in our industry, can have an input. It has been found on a local basis that OSHA personnel are interested in what you have to say and desire knowledgeable input. So maybe, just maybe, with a concerted effort made by all concerned, we can develop good working conditions and relations. Let's face it OSHA is here to stay.●

NATIONAL LABOR RELATIONS ACT

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. ASHBROOK. Mr. Speaker, H.R. 2222, the bill to mandate that interns and residents are professional employees rather than students, as the National Labor Relations Board has held, will be before the House shortly. Certainly, this branch of Government should have more important business to consider than entertaining time on a bill that would reverse a considered decision by an administrative agency with the granted expertise to make just such judgments. This is particularly true when it is apparent that the Board has the authority to find that interns and residents are primarily employees rather than students should a case be presented in which the facts in evidence preponderate in favor of such a determination.

On April 25 I submitted for consideration the fact that H.R. 2222 is inappropriate since it would impose a collective bargaining relationship on three parties—students, their faculty, and hospital administration, when normally collective bargaining is between two parties only. Further, I pointed out that the Committee on Education and Labor had not seriously considered the appropriate bargaining unit for interns and residents and that the report, House Report 95–980, directs a proliferation of bargaining units in hospitals, a direction directly contrary to the directions in the reports accompanying the 1974 health care amendments to the National Labor Relations Act. Let me continue my dialog in opposition to H.R. 2222 by addressing two additional issues today.

BARGAINING OVER EDUCATIONAL TOPICS

The bill now before this House is a complex piece of legislation, for it attempts to reorganize the basic relationship between residents and faculty physicians in graduate medical education programs. The National Labor Relations Board has found residents to be primarily students; proponents of H.R. 2222

urge us to define them as primarily employees. Thus, both sides recognize that the resident's role includes both educational and employment characteristics. The difficult question to be faced is whether these characteristics are sufficiently separable to permit bargaining, under the National Labor Relations Act, over employment issues without damaging educational elements. Significant witnesses suggest that this separation will be difficult if not impossible to create and maintain. In subcommittee hearings on H.R. 2222, William Abelow of New York, clearly describes how the separation existed for the first couple of resident contracts in the city but broke down across successive contracts. Also, at the hearing, labor attorney Harry Keaton of California, convincingly demonstrated that if interns and residents are employees working for wages, then educational aspects of their role are fringe benefits negotiable under NLRB procedures. It seems likely that the education and employment elements are inseparable under collective bargaining. Therefore, I intend to oppose this bill and urge my colleagues to do likewise.

During full committee markup, I offered an amendment which would have excluded educational issues, as well as the number and/or type of diagnostic and/or treatment procedures, from the collective bargaining process. I did this because I do not believe educational issues should be the subject of bargaining. Additionally, I do not believe the recipients of medical training should be the parties to determine what is the best machine or treatment procedure to enhance patient care, as certain groups of interns and residents have demanded in some cases. I do believe the practicing physician and the teaching physician, who have had the medical experience necessary to make those judgments should do so without the inhibitions of bargaining over those judgments. My amendment was rejected, but I understand the proponents of H.R. 2222 intend to offer an amendment to exclude educational issues from the processes of collective bargaining. I hope they do so, for such an amendment will be beneficial to the processes of medical education, although such an amendment would still not make the bill acceptable, as the following discussion will show.

NLRB INTRUSION INTO EDUCATIONAL ACTIVITIES

H.R. 2222 will force the National Labor Relations Board to become intimately involved in collective bargaining by interns and residents. If, as some prefer, the bill is amended in an attempt to preclude bargaining over educational issues, the Board will be regularly involved in determining whether a given bargaining topic in a given setting is an educational aspect. If, on the other hand, the bill is not amended to remove educational elements from bargaining, the Board will be involved in determining whether a hospital's refusal to bargain over a given issue constitutes an unfair labor practice or a residency program constraint imposed on the hospital by specialty certification and educational accreditation organizations.

Given that the NLRB becomes the final arbiter on graduate medical education regardless of the inclusion or exclusion of educational items as subjects of bargaining, a recent opinion of the U.S. Supreme Court becomes crucial for our consideration. In the case of the Board of Curators, University of Missouri against Horowitz, No. 76–695, March 1, 1978, the Supreme Court stated:

Like the decision of an individual professor as to the proper grade for a student in his course, the determination whether to dismiss a student for academic reasons requires an expert evaluation of cumulative information and is not readily adapted to the procedural tools of judicial or administrative decisionmaking. Under such circumstances, we decline to ignore the historic judgment of educators and thereby formalize the academic dismissal process by requiring a hearing. The educational process is not by nature adversarial; instead it centers around a continuing relationship between faculty and students, 'one in which the teacher must occupy many roles—the educator, adviser, friend, and, at times, parent-substitute! . . . This is especially true as one advances through the varying regimes of the educational system, and the instruction becomes both more individualized and more specialized.

The Court went on to say:

Courts are particularly ill-equipped to evaluate academic performance. The factors . . . warn against any such judicial intrusion into academic decisionmaking.

With this strong court opinion, I urge my colleagues to heed the Court's advice and vote against H.R. 2222.●

ELIMINATING REDUCTIONS IN SOCIAL SECURITY BENEFITS FOR SPOUSES AND SURVIVING SPOUSES

HON. MARK W. HANNAFORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. HANNAFORD. Mr. Speaker, last December when we passed the Social Security Amendments of 1977 we included a provision that reduced benefits for spouses or surviving spouses receiving Government pensions. This provision reduces the social security dependency benefits payable to spouses by the amount of any public (Federal, State, or local government) retirement available to the spouse.

Under this provision, an individual who has worked for and earned a social security pension will not be entitled to the full benefits of his or her contributions to the system. Let us consider, for example, the case where a husband is covered by social security and his wife is entitled to a public pension. The impact of the recently enacted law would be to reduce social security spouse or surviving spouse benefits by every dollar of other public pension received.

Mr. Speaker, in most cases, the public pensions are greater than the social security spouse or surviving spouse benefits. In 1977 for instance, the average monthly civil service pension annuity was $632 while the average social security survivor benefit annuity was as $233 (the average spouse annuity was $122). In such a case, where a widow receives a public pension of $632, her social security surviving spouse pension would be reduced to zero unless it were greater than $632.

This provision should be repealed because it reduces benefits in an inequitable manner. These reductions do not take individual needs into consideration. In addition, dollar-for-dollar reductions occur regardless of total annuities receivable. In effect, this reduction hurts those individuals who are most in need of the additional benefits and who have been counting on receiving them. Furthermore, this provision represents a penalty for having been employed in the public sector.

Mr. Speaker, I am today introducing legislation to correct this situation and request that my bill be inserted in the RECORD at this point:

H.R. 12489

A bill to eliminate the reduction in social security benefits for spouses and surviving spouses receiving certain Government pensions, as recently added to title II of the Social Security Act by section 334 of the Social Security Amendments of 1977

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 334 of the Social Security Amendments of 1977 is amended—

(1) by striking out subsections (a), (b)(3), (c), (d)(3), (e), and (g); and

(2) by striking out "is amended to read" and all that follows in subsections (b)(2) and (d)(2) and inserting in lieu thereof in each instance "is repealed.".

(b) Subsections (a)(1) and (b)(1) of section 336 of such Amendments are each amended by striking out all that follows "Act" where it first appears and inserting in lieu thereof "is amended by striking out all that follows 'subsection (q)' and precedes 'and subparagraph (B)'.".

SEC. 2. Subsection (a) of the first section of this Act shall be effective with respect to benefits payable for months beginning with the month in which the Social Security Amendments of 1977 were enacted, in accordance with section 334(f) thereof (as though the amendments made by such subsection (a) had been incorporated in section 334 of such Amendments upon its enactment); and the amendments made by subsections (a), (b)(2), (b)(3), (c), (d)(2), (d)(3), and (e) of such section 334 as in effect without regard to this Act shall be deemed never to have become effective. The amendments made by subsection (b) of the first section of this Act shall become effective (as though they had been included upon the enactment of such Amendments) as provided in section 336(c)(1) thereof.●

AUDITS AND SURVEYS CELEBRATES ITS 25TH ANNIVERSARY

HON. S. WILLIAM GREEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. GREEN. Mr. Speaker, this year marks the 25th anniversary of one of the Nation's leading marketing research organizations, Audits & Surveys Inc. While this firm is headquartered in New York, the impact of its work is felt in every region of the country.

Audits & Surveys has been active in both the private and public sectors of our economy. While meeting the increasingly complex needs of many of the nation's largest corporations, the firm also has produced important statistical information for governmental agencies at the Federal, State and local levels of government. Its senior executives have served as members of the U.S. Census Advisory Committee. The firm has been a leader in the field of marketing research, developing more accurate and meaningful profiles of the consumer marketplace. Among its accomplishments has been the introduction of an advanced concept of market analysis which involves the auditing of every type of retail outlet that carries a specific product category. This is a continuous and comprehensive nationwide audit which reports brand-by-brand shares of the total market held by products in each category.

To achieve statistical accuracy in its market share measurements, Audits & Surveys conducts a yearly sample census of the Nation's retail population. This is the largest privately conducted study of its type, providing current information on the number and type of retail and service outlets across the country.

Complementing its audit activities, the company has a survey division which measures consumer attitudes, opinions and behavior. To this area of research Audits & Surveys has applied specific statistical procedures in order to assure greater accuracy of findings and more meaningful interpretations.

The accomplishments of Audits & Surveys and its achievement of 25 years of professional service reflects the attitudes of its two top officials, both of whom have performed distinguished public service.

Founder and president Solomon Dutka received a special citation for his work on the Manhattan project during World War II, and has served as a delegate to the United Nations Subcommission on Statistical Sampling. Mr. Dutka is a member of the U.S. Census Advisory Committee, a fellow of the American Statistical Association and of the American Association for the Advancement of Science. He also is a member of the World Business Council and Chief Executives Forum. He is the author of numerous articles on statistical techniques and their application to marketing as well as coauthor of several books on marketing research.

As a statistician with the Bureau of the Census in the 1930's, executive vice president, Lester R. Frankel, designed the population probability sample that is in use to this day and has served as the model for similar surveys in other nations. Mr. Frankel has served as president of the American Statistical Association, a director of the American Management Association and president of the Market Research Council of New York.

Both are active in academic circles as well, notably as adjunct professors of statistics at New York University's graduate school of business administration.

In their quest for accuracy and reliability, Mr. Dutka, Mr. Frankel and their associates have compiled a record of achievement of which they can be justifiably proud. Last year Audits & Surveys was the focus of a two-part Radio Free Europe broadcast to Russia. The program traced Solomon Dutka's transition from mathematician and nuclear physicist to statistician and businessman, and chronicled the rise of Audits & Surveys from the one-room office he opened in 1953 with one secretary and a single client.

Today the company maintains a headquarters staff of 300 and a nationwide network of more than 5,000 field reporters who collect, tabulate, and analyze data for more than 100 clients.

I am happy to offer my congratulations to all associated with Audits & Surveys on this significant occasion.●

ILLINOIS SUPPORT FOR THE BOUNDARY WATERS WILDERNESS ACT

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. FRASER. Mr. Speaker, the Boundary Waters Canoe Area serves as a wilderness recreation resource for the entire Nation. It is particularly important to the heavily industrialized States of the Midwest whose own wilderness vanished long ago. A glacier-sculpted land covered by pine forests, dotted with hundreds of lakes and streams, and populated by loons, wolves, beavers, eagles, and moose, the BWCA maintains an almost magical hold on the minds of those who visit it.

It is therefore no surprise that Illinois, the most populous Midwestern State, provides approximately 12 percent of all BWCA users, second only to Minnesota. In 1974, for example, over 19,000 Illinois citizens traveled to the BWCA and they spent 149,000 visitor days in the canoe country. Approximately 63 percent of these users explored the area without motorboats and snowmobiles, preferring instead to paddle a canoe, hike, snowshoe, or cross county ski.

That many residents of Illinois want to bring full wilderness protection to the BWCA is reflected in the support their House delegation has provided for the Boundary Waters Wilderness Act, H.R. 2820, which I introduced about a year ago; my colleagues JOHN ANDERSON, HENRY HYDE, EDWARD MADIGAN, RALPH METCALFE, AB MIKVA, MORGAN MURPHY, GEORGE O'BRIEN, and TOM RAILSBACK have all cosponsored the bill.

The support of Illinois residents is further evidenced by the editorial positions taken by two major Illinois newspapers: the Chicago Tribune and the Chicago Daily News. I commend my colleagues' attention to these editorials:

[From the Chicago Daily News, July 25, 1977]

KEEP THE WILDERNESS WILD

The Boundary Waters Canoe Area in northeast Minnesota provides a wilderness haven for nearly 20,000 Illinoisans each year. But the area, with its 1,600 square miles of pristine forests and lakes, could be turned into a motorized thoroughfare under legislation Congress is considering.

Rep. James Oberstar (D-Minn.) wants to enlarge the Boundary Waters Canoe Area and make half of it into a National Recreation Area, where motorboating, snowmobiling and treecutting would be allowed. Wilderness lovers—including most of the animals who make the forest their home—would be crammed into what's left.

Opponents of Oberstar's legislation are rallying around another bill introduced by Rep. Donald Fraser (D-Minn.). He wants to make the area a true wilderness domain, saved from man's motorized encroachments.

The Boundary Waters Canoe Area is the only wilderness preservation area in the nation that allows motor vehicles or treecutting of any kind. Fortunately, very few trees have been felled in the last few years, and motorboats are heavily restricted. Snowmobiles, which roared through the area's snowy stillness until last year, now are virtually forbidden.

These uses of the Boundary Waters Canoe Area originally were allowed because of fears by local residents that their economy would suffer if the area was limited to wilderness recreation. Yet last year nearly 165,000 persons visited the area, spending millions of tourist dollars along the way. Clearly, the public needs and wants wilderness areas where nature's tranquility is uninterrupted by the roar of engines and saws.

We support Rep. Fraser's bill and disagree with the Chicago-based Boating Industry Assn., which contends the legislation would "create an exclusive clubground for canoe paddlers and backpackers at the expense of other citizens." The Boundary Waters Canoe Area is for everyone who is willing to meet the wilderness on its own terms.

[From the Chicago Tribune, Apr. 18, 1977]

THE BOUNDARY WATERS' FUTURE

On the border between northeastern Minnesota and western Ontario is the Boundary Waters Canoe Area, a unit of the National Wilderness System and part of the Superior National Forest. Its million acres are adjacent to the Quetico Provincial Park in Canada. Together, the BWCA and the Quetico compromise a uniquely large and unspoiled area of northern lakes and forests. The wilderness status of the Canadian portion is effectively protected by law. But the American portion is under siege.

When the Wilderness Act was passed in 1964, the BWCA was included, but as a "special case" with loopholes for logging and access to motorboats [since extended to include snowmobiles]. The status of BWCA is ambiguous, and there is a consensus that it needs clarification by new legislation.

But of what kind? Two contrasting answers are sponsored by two Minnesota Democratic congressmen. Rep. Ronald M. Fraser of Minneapolis would firmly designate all million acres of the BWCA as wilderness, with no special loopholes. Rep. James L. Oberstar of Chisholm would lop off 40 per cent of the BWCA as a "national recreation area," available to wide variety of exploitation incompatible with the wilderness concept. Four segments of the BWCA that Rep. Oberstar would detach are on the Canadian border.

The controversy is a classic instance of conservation vs. exploitation, but there are special dimensions in this instance which strengthen the conservationist cause. One is

that although loggers and snowmobiles have innumerable other areas, in Minnesota and beyond it, in which to do their things, those who value a northern lakes and forest wilderness have no comparable area other than BWCA-Quetico in which to satisfy their wishes. Another is that wilderness seekers coming to the BWCA are so numerous that they refute any notion that a BWCA wilderness is locked away from extensive human use.

There are 16 million acres of commercial forest in Minnesota outside the BWCA. The debated stands of virgin forest in the BWCA constitute only one per cent of the potential commercial timber in that one state. The counterparts in other states of those who covet the spruce and pine in the BWCA have reconciled themselves to a pulp mix of more aspen, birch, and balsam and less spruce and pine. The real question is not whether or not timber interests should be considered [they should be] but whether or not they should be allowed to cut almost everywhere in the national forests.

Recent public use figures for the BWCA suggest that those who approach this controversy preoccupied with money have considerable reason to side with the conservationists. Of more than a million visitor-days in the BWCA in 1974, 68 per cent were spent by paddlers of canoes. Outfitting canoe trips is a major industry in Ely. Snowmobilers (most of them local people) accounted for only one per cent of the usage, and motorized boaters for only 28 percent. Here is one area in which canoeists outnumber other people.

About 15 per cent of the visitor-days were spent by residents of Illinois, and many by people still farther away from the BWCA. Quite aside from conserving a unique habitat, a case can be made that in this instance wilderness designation would be both popular and profitable.

Failure to enact the policy of the Fraser bill would subject the BWCA to immediate diminution. It would seriously erode the wilderness character of those parts of the present BWCA that even Rep. Oberstar would protect.

In our increasingly crowded, polluted, noisy, and paved world, legislative changes affecting the Boundary Waters Canoe Area should defend rather than impair its wilderness status.●

FUTURE U.S. TRADE POLICY

HON. FREDERICK W. RICHMOND

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. RICHMOND. Mr. Speaker, my colleague from Minnesota, Mr. NOLAN, has submitted an important statement to the Subcommittee on International Economic Policy and Trade for its hearings on agricultural trade policy. In his testimony, Mr. NOLAN explains why the producers of raw materials, whether U.S. farmers or Zambian copper miners, are facing an increasingly heavy burden of debt. Mr. NOLAN states that U.S. trade policy has forced U.S. farmers and Zambian copper miners to produce and sell their commodities at a loss in volatile international commodities markets. This boom and bust policy, according to Mr. NOLAN, "is a blueprint for world economic depression."

The United States can play a leading role in establishing an international commodities policy which will raise and stabilize the prices of commodities (whether farm products or metals) at levels which are fair to producers and consumers. I commend Mr. NOLAN for his remarks and I urge my colleagues to read his testimony.

The statement follows:

U.S. FARMERS, ZAMBIAN COPPER MINERS AND U.S. TRADE POLICY

(By Representative RICHARD NOLAN)

U.S. TRADE POLICIES HURT FARMERS AND LDC'S

Between 1945 and 1971, the United States performed an instrumental role in holding the Western world's economy together. Since 1971, however, the international economic order has been disintegrating and the ability of the U.S. to guide the future course of events has diminished substantially. For these reasons, the role which the U.S. continues to play as the world's leading grain exporter acquires added significance. The U.S. still has the economic influence to take the lead in developing an international commodities policy which will increase the purchasing power of producers at home and abroad, thus stimulating the economies of industrialized nations and less developed countries (LDCs). Previous policy, it is interesting to note, has had a remarkably similar impact on U.S. farmers and LDCs.

Since 1952, succeeding administrations have maintained a "cheap food" policy which has had harmful economic consequences at home and abroad. Low farm commodity prices were the rule—occasionally interrupted by brief periods of high prices, but followed by a prolonged bust period of declining prices. Consumer food prices continued to rise, however, as the grain trade and food industry made windfall profits at the expense of farmers and consumers. The cheap food policy neither provided farmers with adequate returns nor stabilized farm commodity prices at fair levels. For the most part, farmers were forced to sell at low world price levels, which were below their cost of production.

Although the volume of grain exported increased during the past thirty years, the value of wheat and feed grains decreased by early 1978 to levels not seen since the Depression years. Exports of cheap grain have meant that U.S. farmers were selling at a loss, exporting their equity abroad as they mined their soil to increase its yield. While agricultural exports are viewed as a primary means to balance our trade, exports of cheap grain have aggravated the nation's trade deficit.

The cheap food policy has had a serious economic impact on U.S. agriculture. Farmers continue to produce at a loss in order to pay off existing debts. Recognizing that farm indebtedness have reached grave proportions, on April 24, 1978, the House of Representatives passed the most comprehensive farm debt refinancing measure since the Depression. Despite low farm commodity prices, non-farm and foreign investors are buying up more U.S. farmland, anticipating that the increasing competition for all real estate, including farmland, will continue to inflate land values, thus guaranteeing a safe return on investment.

Over the past thirty years, the non-oil producing LDC's have experienced economic circumstances similar to those confronting U.S. farmers. LDCs usually were forced to sell their raw materials—metals and agricultural commodities—at a loss in volatile international commodities markets dominated by U.S. companies. Today, the LDCs carry a debt load which exceeds $200 billion and which cannot easily be repaid. One out of every four dollars now owed by LDCs must be spent to pay off previous loans.

The current situation in the world copper market illustrates the striking similarity between the position of LDCs and U.S. farmers. Zambia, according to a recent article in the Washington Post, will produce all the copper it can this year even though it loses 9 cents a pound. Zambia has no other major product to sell and therefore subsidizes its copper production in order to acquire the dollars necessary for payment of interest debt to U.S. bankers—debt incurred from running the copper mines at a loss in the first place.

Despite depressed copper prices, the world's major oil producing companies are buying up the copper industry, anticipating a substantial rise in copper prices in the next few years. Multinational corporations and U.S. banks will then have a tighter grip over Zambia's economic welfare. We have no reason to expect this new colonialism to be any more benign than that of previous generations.

A NEW COMMODITIES POLICY

Neither the U.S. economy nor that of the world will prosper as long as U.S. farmers and LDCs are shackled with debt, being forced to spend a great portion of their income on interest payments. The alternative is to raise and stabilize the price of grain and other raw materials (such as copper) so that farmers and LDCs will have the purchasing power necessary to stimulate their respective economies. The North-South dialogue between industrialized and developing nations as well as current discussions to establish international commodities agreements provide the logical vehicle for shaping a new international commodities policy—one that is no longer based on colonial-type exploitation of the world's producers, whether they be U.S. farmers or Zambian copper miners.

Since the U.S. is the world's leading grain exporter, this country is in an advantageous position to lead other grain exporting nations in raising and stabilizing the price of grain in international trade. Raising grain prices would increase the returns to our beleaguered farmers and reduce our trade deficit. If grain prices are raised to 100 percent of parity, according to a recent Department of Agricuture issue briefing paper, the U.S. would lose 30 percent of its grain export market but the value of all commodities exported would increase by $7.5 billion the first year and would continue upward in subsequent years.

But the U.S. would not have to lose such a large portion of its grain export market, even if prices were established at 100 percent of parity. Currently, with its cheap food policy, the U.S. is already the grain supplier of last resort. Other exporting nations will continue to undersell the U.S. whether our prices are high or low. The level of prices is not the major factor in the maintenance of export markets. Rather, U.S. farmers do not have an effective marketing agent to obtain better prices for their production.

The U.S. will not be the residual supplier of grain if Congress enacts the Weaver bill, H.R. 11294, of which I am a cosponsor. The bill designates the Commodity Credit Corporation as the seller or market agent for export sales of U.S. grain. Given the great volume of U.S. grain involved in the export trade, the CCC will be able to bargain for higher export prices. Such a program gives the U.S. flexibility as a price leader so that we will maintain our current export markets and develop new ones through CCC negotiation of reliable long term sales which private grain traders are unable to transact.

Table I illustrates how the U.S., the world's leading wheat exporter, is actually pricing

our grain below the market. Most of the major importing countries support the price of wheat at levels substantially higher than does the U.S. The low priced U.S. wheat which other countries import is not allowed to undermine their domestic price support programs because import taxes are levied to make up the different between the low U.S. selling price and the higher domestic support levels. Since the U.S. dominates the world wheat trade (see Table II), other wheat exporting nations are forced to follow the U.S. cheap food policy. By enacting H.R. 11294, the U.S. will become a price leader in grain export sales and will still maintain export markets for U.S. grain.

CHEAP COMMODITIES—THE ROAD TO ECONOMIC DEPRESSION

In reality, the cheap food policy plays into the hands of those who would use food as a weapon in order to assure U.S. economic dominance over a poverty-stricken and hungry world. By keeping grain prices low and by allowing the international commodities trade to remain so volatile, the U.S. gives LDCs little incentive to stimulate their own grain production. The cheap food policy thus discourages LDCs from attaining the reasonable cereal self-sufficiency necessary for a balanced economy. Incidentally, the same logic which sustains the cheap food policy is used to defend a colonial-minded "cheap copper" policy of purchasing raw materials at the lowest prices possible, even if it means driving producing nations deeper into debt. Under such circumstances, LDCs remain little more than client states whose debt is in constant need of servicing.

Proponents of the cheap food policy also claim that higher grain prices will undermine U.S. export markets because other nations, including LDCs, will begin producing grain themselves. This argument fails to account for the widespread underconsumption prevailing in the world today. If the producers in LDCs receive adequate returns for their production (whether wheat or copper) their expanded purchasing power will increase consumption dramatically.

Agricultural productivity, whether in the U.S. or abroad, cannot be maintained when farmers continue to sell at a loss. In the U.S., LDCs, and other countries which do not stabilize farm commodity prices, the periodic price swings have repeatedly disrupted their agricultural economies. As the world food supply alternates between scarcity and glut, each up and down swing in farm commodity prices has wreaked havoc upon the world's farmers, cutting into their ability to continue producing enough food to meet minimum human requirements. By weakening the world's farm economies, boom and bust farm commodity prices reduce our capability of feeding a hungry world.

The boom and bust policy means that farmers are selling at a loss more often than not. Selling farm commodities at a loss or purchasing copper for less than it costs to produce it, is a blueprint for world economic depression. While free trade advocates fear that the increasing tempo of protectionist demands will lead to a world depression reminiscent of the 1930's, they overlook a crucial point: free trade policies based on cheap food, cheap copper, etc., are at the root of the world's current economic malaise.

Selling at a loss in volatile international commodities markets creates a mounting debt load for farmers and producing nations. As U.S. farmers, Zambian copper miners and other producers become increasingly burdened with debt, multinational corporations and international banks will become entrenched as power brokers of the Western world. Unlike benign parasites, however, the multinationals and international banks do not seem to realize that their policies are killing the host—the people from whom the debt payments are being extracted.

Just as the International Monetary Fund tells LDCs that austerity measures—budget cuts, reduction of public services, wage freezes, higher food and fuel prices—are necessary as a precondition to obtaining more loans, the U.S. government tells farmers to pull in their belts and gives them debt refinancing measures to prevent foreclosures. Neither the World Bank nor the U.S. government will countenance higher commodity prices so that producers will have an opportunity to rid themselves of their mounting debt load.

Between exporting wheat at parity prices of around $5.00 per bushel and the current $2.35 loan rate, there is obviously a great deal of room for negotiation. The Carter administration nevertheless refuses to budge even a nickel, claiming that to do so would price U.S. wheat out of the export market. As previously stated, such an argument is illogical, unless as the foundation for cheap food policy.

Members of the Subcommittee on International Economic Policy and Trade should carefully examine how U.S. trade policies injure U.S. farmers and Zambian copper miners. I also urge the Subcommittee members to be aware that the cheap food-cheap copper policy may lead to an economic and political maelstrom which will make the events of the 1930's seem like mere ripple in the mainstream of civilization.

TABLE I.—*Basic Price Support Levels for Wheat*

34 Countries Reporting to International Wheat Council, 1976/77)

Country	*Support Price U.S. $ per bu.*

GAO AUDIT OF THE HOUSE BEAUTY SHOP

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mrs. BURKE of California. Mr. Speaker, the adoption of House Resolution 315 on November 1, 1977 transferred the staff of the House Beauty Shop to the House payroll under the Employee's Position Classification Act. This move, which became effective on January 3, 1978, also dissolved the Select Committee on the House Beauty Shop, of which I was chairperson, and placed the shop under the jurisdiction of the Committee on House Administration.

My main objective in sponsoring this resolution was the extension to the last group of House support staff not yet on the payroll the benefits of retirement, health, and life insurance. At the same time, I did not wish for this transfer to result in an additional cost to the Federal Government.

The House Beauty Shop has remained financially sound since its inception. Indeed since 1969, the shop has transferred a total of $38,198 to the U.S. Treasury.

As one of my last responsibilities as chairperson of the Select Committee on the House Beauty Shop, I requested a General Accounting Office audit of the financial transaction of the House Beauty Shop for calendar year 1977. This audit determined that in 1977 the balance at the end of the year was $39,151.12. This represents an increase of $8,152 from the previous year; $8,311.04 of the year end balance will be transferred to the Treasury General Fund. The remainder of the balance ($30,840.08) will be applied to the impairment of capital and the replacement of equipment as authorized by the Legislative Branch Appropriation Act of 1970.

This year, as in the past, the House Beauty Shop has been of no cost to the taxpayers. The complete proposed GAO

report of the audit of the House Beauty Shop which follows will attest to this:

YVONNE BRATHWAITE BURKE,
House of Representatives.

DEAR MRS. BURKE: As required by the Legislative Branch Appropriation Act, 1970 (83 Stat. 347), and in accordance with your December 16, 1977 request as Chairperson of the Select Committee on the House Beauty Shop, we audited the financial transactions of the House Beauty Shop for calendar year 1977.

SCOPE OF AUDIT

We reviewed the House Beauty Shop's accounting records and financial transactions in accordance with the Comptroller General's standards for auditing financial transactions, accounts, and reports of governmental activities. These standards include generally accepted auditing standards. Our examination included such tests of the accounting records and such auditing procedures as we considered necessary in the circumstances.

OPINION ON FINANCIAL STATEMENTS

We prepared the accompanying financial statements (schs. 1, 2, and 3) for the House Beauty Shop from the accounting records furnished us. We adjusted the House Beauty Shop's records, which were maintained on a cash basis, to present its financial position and results of operations on an accrual basis. These statements do not include the costs of certain benefits and services—such as space, utilities, and ordinary building repairs and maintenance—that are furnished to the House Beauty Shop without charge.

In our opinion, the accompanying financial statements (schs. 1, 2, and 3), prepared on a basis consistent with that of the preceding year and in accordance with the financial arrangements described above, present fairly the financial position of the House Beauty Shop, at December 31, 1977 and 1976, the results of its operations, and the changes in its financial position for the years then ended.

GENERAL COMMENTS

The House Beauty Shop provides a convenient beauty facility for Congresswomen, wives of Congressmen, congressional employees, and the general public. House Resolution 1000, 90th Congress, placed the House Beauty Shop under the direction of the Select Committee on the House Beauty Shop on December 11, 1967. The Select Committee entered into a fixed-fee contract with a manager to operate the shop. As of December 31, 1977, the manager employed nine beauticians, three manicurists, an assistant to the manager, and a receptionist on a full-time basis and seven beauticians, a manicurist, two maids, and an electrologist on a part-time basis.

Effective January 3, 1978, the staff of the House Beauty Shop was transferred to the House payroll under the House Employees Position Classification Act and the Shop was placed under the jurisdiction of the Committee on House Administration, with direct oversight to be exercised by the Subcommittee on Services (House Resolution 315, 95th Congress).

RESULTS OF OPERATIONS

The House Beauty Shop realized net income of $10,027 for 1977 after payment of $9,200 in bonuses compared with net income of $3,696 for 1976 after payment of $7,350 in bonuses. The bonuses were authorized by the Select Committee.

The Legislative Branch Appropriation Act, 1970, requires that the net income, as established by our annual audit, after restoring any impairment of capital and providing for replacement of equipment, be transferred to the general fund of the U.S. Treasury. We computed the net income to be transferred for calendar year 1977 as follows:

Equity of the House of Representatives as of Dec. 31, 1977	$39,151.12
Capital authorized pursuant to H. Res. 1000, 90th Cong	15,000.00
Provision for replacement of equipment (accumulated depreciation as of Dec. 31, 1977)	15,840.08
Total	30,840.08
Net income to be transferred	8,311.04

Since 1969 the House Beauty Shop has transferred $38,198 to the U.S. Treasury.

As required by the Legislative Branch Appropriation Act, 1970, we are sending copies of this report to the Speaker of the House of Representatives and to the Clerk of the House of Representatives. We are also sending a copy to the Chairman, Committee on House Administration.

Sincerely yours,

Comptroller General of the United States.

SCHEDULE 1.—HOUSE BEAUTY SHOP: COMPARATIVE BALANCE SHEET, DEC. 31, 1977, AND 1976

	1977	1976
ASSETS		
Current assets:		
Cash in U.S. Treasury	$29,547	$17,454
Petty cash and change funds	700	700
Accounts receivable	484	188
Prepaid expenses	54	506
Inventory of merchandise and supplies [1]	11,789	11,525
Total current assets	42,574	30,373
Fixed assets:		
Equipment [2]	18,480	18,372
Less: Accumulated depreciation	15,840	14,125
Total fixed assets	2,640	4,247
Total assets	45,214	34,620
LIABILITIES AND EQUITY		
Current liabilities:		
Accounts payable	4,054	3,137
Employees' Federal and State taxes withheld	2,009	484
Total current liabilities	6,063	3,621
Equity of the House of Representatives:		
Balance at beginning of year	30,999	27,894
Less: Amount transferred to U.S. Treasury	1,875	591
Balance	29,124	27,303
Add: Net income for the year	10,027	3,696
Balance at end of year	[3] 39,151	30,99
Total liabilities and equity	45,214	34,620

SCHEDULE 2.—HOUSE BEAUTY SHOP: COMPARATIVE STATEMENT OF OPERATIONS FOR CALENDAR YEARS 1977 AND 1976

	1977	1976
Income:		
Beauty services	$279,389	$261,116
Retail sales	44,958	40,297
Less: Cost of retail sales	27,960	26,076
Subtotal	16,998	14,221
Miscellaneous income	345	310
Total operating income	296,732	275,647
Operating expenses:		
Salaries:		
Beauticians	154,337	148,318
Manicurists	20,726	18,936
Receptionists	19,106	16,491
Maids	9,245	8,632
Total salaries	203,414	192,377
Supplies	23,361	22,364
Managerial fee	24,000	24,000
Payroll tax	15,210	14,715
Laundry	519	829
Office	2,483	2,348
Insurance	2,838	2,394
Depreciation	1,764	1,821
Accounting	2,090	1,800
Medical examinations	575	640
Bad debts	28	112
Repairs	567	657
Telephone	343	308
Training	59	78
Miscellaneous	62	158
Loss on disposal of assets	192	
Total operating expenses	277,505	264,601
Net income from operations	19,227	11,046
Bonus payments:		
Manager	1,000	1,000
Employees	8,200	6,350
Total bonuses	9,200	7,350
Net income for the year	10,027	3,696

SCHEDULE 3.—HOUSE BEAUTY SHOP: COMPARATIVE STATEMENT OF CHANGES IN FINANCIAL POSITION, CALENDAR YEARS 1977 AND 1976

	1977	1976
Funds provided:		
Sales	$324,347	$301,413
Miscellaneous income	345	310
Total funds provided	324,692	301,723
Funds applied:		
Operating expenses (excluding depreciation and other items not requiring an outlay of funds)	275,619	262,780
Cost of retail sales	27,960	26,076
Bonus payments	9,200	7,350
Equipment additions	279	202
Amount transferred to U.S. Treasury	1,875	591
Increase in working capital	9,759	4,724
Total funds applied	324,692	301,723

ANALYSIS OF CHANGES IN WORKING CAPITAL

	Increase or decrease (−)	
	1977	1976
Working capital changes:		
Cash	$12,093	$4,978
Accounts receivable	296	6
Prepaid expenses	−452	16
Inventories	264	−3
Accounts payable	−917	−67
Employees' Federal and State taxes withheld	−1,525	−206
Net increase in working capital	9,759	4,724

[1] Inventories are stated at cost, using the first-in, first-out method of valuation.
[2] Equipment is depreciated over a 10-yr life using the straight-line method.
[3] As explained on page 3, $8,311 is to be transferred to the U.S. Treasury.

Note: The accompanying notes on page 7 are an integral part of this statement. Our opinion on this statement appears on page 2. ●

STATEMENT BY CONGRESSMAN ELWOOD H. HILLIS

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. HILLIS. Mr. Speaker, a few days ago I received approximately 700 letters from students ranging from the 4th grade through early high school. These letters were the result of a campaign conducted by the Kokomo Board of Realtors.

Students were asked to write a letter to their Congressman or Senator on the topic of "What It Means To Be An American." All of the letters were judged and awards of $25 U.S. Series "E" bonds

were given to the winners of five categories.

The Kokomo Board of Realtors is to be commended for their efforts. The importance of getting our youth involved in the political process cannot be overstated. Recently the percentage of the electorate voting, even in national elections, has been disturbingly low. Hopefully, through projects such as this one sponsored by the Kokomo Board of Realtors, this trend will be reversed.

I urge all organizations to take an active role in helping educate our youth in the political process, both locally and at the national level. If we are able to teach our youth the strengths of our political system, and get them involved at an early age, their participation in the political process can result in a lifetime experience. This Nation cannot afford to do without the ideas our youth will soon offer to solve the difficult social and political issues of the future.

I was fortunate to receive two of the five winning letters. In order that others might share in the benefit of these letters, I ask unanimous consent that they be placed in the RECORD at this point.

Letters follow:

GREENTOWN, IND., *March 28, 1978.*

U.S. Representative ELWOOD H. HILLIS,
Rayburn Office Building,
Washington, D.C.

DEAR REPRESENTATIVE HILLIS: Equality and justice for all have become vital forces in our employment, health, education, and welfare.

It is my opinion that freedom from fear is the greatest assurance Americans have. The guarantee of this freedom prevails in a society where there is respect for law and order.

Sincerely,

KIMBERLY BROOKS.

KOKOMO, IND.

DEAR CONGRESSMAN HILLIS: I would like to tell you what I think is right with America. In America we have the right to vote for those we choose to be in office. We have the right to worship openly and freely. We have freedom of speech. Also it is our choice to seek the type of education that we wish which will prepare us for the type of life that we choose to lead. In America we have the right to be tried by jury.

Sincerely yours,

KIM LANDRUM,
Kokomo Christian School 6th.●

HIGHLAND PARK'S HIGH-INTENSITY TUTORING PROGRAM RECEIVES HIGH PRAISE FROM U.S. OFFICE OF EDUCATION

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. CONYERS. Mr. Speaker, Highland Park, Mich., a small city of 32,000 persons existing within the city of Detroit, is struggling every day to provide decent services and economic opportunities to its citizens.

Recently, Highland Park's school system received commendation from the Office of Education for its special reading and mathematics programs. Known as the high-intensity tutoring program, it was developed in Highland Park's junior high school grades to enable high-achievement students to tutor lower achievement students. In the process the student-tutors improve their own skills tremendously. Begun in 1970, this federally funded program has become an enormous success. Test scores have demonstrated marked improvement in pupil performance, and everyone agrees this is attributable to the tutorial program.

Highland Park's program should be a model for other cities. Already school officials from other cities have studied the high-intensity tutoring program. If other school systems are interested, I suggest they contact the program director in Highland Park: Mr. Krikor Byndrian, dissemination specialist. Highland Park Schools, 20 Bartlett, Highland Park, Mich. 48203.●

MILITARY POLICY AND BUDGET PRIORITIES: FISCAL YEARS 1979–82

HON. PARREN J. MITCHELL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. MITCHELL of Maryland. Mr. Speaker, I have inserted the Hoopes-Scoville report on the defense budget entitled, "Military Policy and Budget Priorities: Fiscal Years 1979–82." Many of the conclusions of this report will be used to formulate the Mitchell Transfer Amendment during consideration of the first budget resolution. I now conclude this series with several of the articles and editorials which appeared in response to the report.

The articles follow:

[Fom the Kansas City Times, Dec. 22, 1977]

CARTER TOLD "PUT BUTTER OVER GUNS"

(By Jonathan Wolman)

WASHINGTON.—The guns-or-butter argument was resurrected Wednesday by a coalition of unions, city officials and civil rights leaders who fear President Jimmy Carter is reversing his campaign promise to cut the military budget.

The debate over spending priorities—military and domestic—raged during the 1960s as the Johnson administration attempted to fight the war on poverty and the war in Vietnam simultaneously.

It was heard again in Washington Wednesday as leaders of the coalition told James McIntyre, acting director of the Office of Management and Budget, that they are disturbed about reports that the Pentagon will claim 25 percent of the increase in federal spending next year.

The coalition predicted "severe competition for scarce federal funds in the coming years," and expressed doubt that domestic social programs will be adequately funded if the military budget continues to rise.

The group included officials of the United Auto Workers union, the National Urban League, the U.S. Conference of Mayors, the National Education Association, the International Association of Machinists and the American Federation of State, County and Municipal Employees.

"Mr. McIntyre assured us that the reported figures as to growth of the defense budget are not fixed in cement," said Mayor Lee Alexander of Syracuse, N.Y. But coalition members agreed that McIntyre gave no indication that the defense budget would not show a big increase when the president's spending proposal is made public next month.

"We were very pleased when Mr. Carter said during the campaign that he was going to slash the defense budget without impairing the nation's safety," said Ron Brown of the Urban League. "Now we're very concerned—we have not seen evidence that the commitment will be fulfilled."

Published reports indicate Carter will seek an increase of more than $9 billion in the $117 billion defense budget. During the 1976 campaign he pledged to pare $5 billion to $7 billion from the budget.

The coalition presented OMB with an analysis of defense spending prepared by two longtime advocates of a slimmer, less expensive, military force: Townsend Hoopes and Herbert Scoville, former Pentagon officials.

Hoopes and Scoville suggested a wide range of potential savings in the Pentagon budget based on their analysis of current U.S. capabilities, the international situation and a reading of Soviet capabilities and intentions.

"There can be no compromise over the procurement of weapons needed to maintain a secure deterrent and stable nuclear balance," they said. But they added: "We should not pursue the illusory goal of nuclear superiority."

Members of the coalition, most of them early Carter supporters, said the defense budget can be safely reduced, with savings going into domestic programs.

[From the Staten Island Advance, Staten Island, N.Y., Dec. 22, 1977]

CUT IN DEFENSE SPENDING URGED TO AID CITIES, LABOR

(By Kay Mills)

WASHINGTON—Urban and labor leaders lobbied administration budget planners Wednesday against a rumored $9.3-billion military spending increase, citing a study by defense experts saying $10.4 billion actually could be cut instead.

They said the money should be spent on improving the national job and housing pictures.

Leaders of the U.S. Conference of Mayors, American Federation of State, County and Municipal Employees, International Association of Machinists, United Auto Workers, National Education Association and National Urban League met Wednesday with James McIntyre, acting director of the Office of Management and Budget.

Then they called a news conference at which Syracuse, N.Y., Mayor Lee Alexander—president of the U.S. Conference of Mayors—said the combination of increased defense spending, proposed tax and therefore federal revenue cuts, and the continued aim of balancing the budget by 1981 could have "devastating" consequences for the nation's cities.

"We believe that trimming unnecessary defense expenditures will generate an important source of funds for meeting our vital needs at home," the heads of the organizations said in releasing a study on military policy and budget priorities. The report was prepared by former Air Force Under Secretary Townsend Hoopes and Dr. Herbert Scoville, former assistant director of the Arms Control and Disarmament Agency and former deputy director of the Central Intelligence Agency.

Their analysis indicated that through cutbacks in strategic weapons and manpower, the United States could save $10.4 billion in the coming fiscal year and $11.1 billion by fiscal 1982.

Their conclusion was based, they said, on the premise that military expansion as planned is "not warranted at this time either by the general climate of international con-

ditions or by the present and prospective state of U.S.-Soviet or U.S.-China relations."

Current foreign policy frustrations—such as oil price increases, political unrest in the Middle East and continuing white minority rule in southern Africa—are not the result of any U.S. military weakness, Hoopes and Scoville said.

The United States can maintain its strategic forces at an effective but more economical level, they argued, by cancelling certain programs designed to increase warhead accuracy—such as development and deployment of the MX mobile intercontinental ballistic missile, improvements in the Minuteman missile warhead and guidance system, and development of maneuverable ballistic re-entry systems.

Many of these missile development projects increase international tensions and provide less security rather than more, Scoville said.

Hoopes and Scoville also suggested dropping development of the Trident II and cruise missile systems. They envision further savings by reducing manpower and the number of aircraft carriers and fighter squadrons in the Pacific and Asia.

Mayor Alexander said that the urban and labor coalition did not want to reduce the existing military budget nor did it oppose increases to cover inflation. But the administration cannot plan to allot a fourth of its budget increases to defense, as published reports indicate, "without recognizing the danger to urban America," he added.

George Poulin, general vice president of the machinists, said his union endorses the report. But he urged the Carter administration to establish a transition program "so that our members are not left out in the cold when we make this conversion" from armaments work.

[From the Detroit News, Dec. 22, 1977]

COALITION REVIVES "GUNS VS. BUTTER" CRY—CARTER ALLIES FEAR A MILITARY BUDGET BOOST

WASHINGTON.—The guns vs. butter argument was resurrected yesterday by a coalition of unions, city officials and civil rights leaders who fear President Carter is reversing his campaign promise to cut the military budget.

Leaders of the coalition told James McIntyre, acting director of the Office of Management and Budget, that they are disturbed about reports the Pentagon will claim 25 percent of the increase in federal spending next year.

The guns vs. butter debate (military against domestic spending) raged in the 1960's during the time of the Vietnam War buildup in the United States.

The coalition predicted "severe competition for scarce federal funds in the coming years," and expressed doubt that domestic social programs will be adequately funded if the military budget continues its current escalation.

The group included officials of the United Auto Workers union, the National Urban League, the U.S. Conference of Mayors, the National Education Association, the International Association of Machinists and the American Federation of State, County and Municipal Employes.

"Mr. McIntyre assured us that the reported figures as to growth of the defense budget are not fixed in cement," said Mayor Lee Alexander of Syracuse, N.Y. However, coalition members agreed that McIntyre gave no indication the defense budget would not show a big increase when the President's spending proposal is made public next month.

"We were very pleased when Mr. Carter said during the campaign that he was going to slash the defense budget without impairing the nation's safety," said Ron Brown of the Urban League. "Now we're very concerned—we have not seen evidence that the commitment will be fulfilled."

Published reports indicate Mr. Carter will seek an increase of more than $9 billion in the $117 billion defense budget. During the 1976 campaign he pledged to pare $5 billion to $7 billion from the budget.

The coalition presented the budget office with an analysis of defense spending prepared by two longtime advocates of a slimmer, less expensive, military force—former Pentagon officials Townsend Hoopes and Herbert Scoville.

Hoopes and Scoville said "there can be no compromise over the procurement of weapons needed to maintain a secure deterrent and a stable nuclear balance." But they added, "We should not pursue the illusory goal of nuclear superiority."

Members of the coalition, most of them early Carter supporters, said the defense budget can be safely reduced, with savings going into domestic programs. The UAW, for example, considers national health insurance a top priority. The mayors and the public employes union seek improvements in urban and welfare programs. These social efforts would cost billions at a time when Mr. Carter seeks to reduce the federal budget deficit.

"There have to be dollars from somewhere," said Gene Casraiss of the UAW. He contended there is room for savings in the huge defense budget.

Brown, vice-president of the Urban League, added, "You no longer can have both guns and butter. We are firmly on the record in this matter—we choose butter."

[From the Philadelphia Daily News, Dec. 23, 1977]

A PROPER RESPONSE

You could say it is a difference in style, but it goes much deeper than that.

While Mayor Frank Rizzo of Philadelphia was yelping about a state of war having been declared on the city because a couple of lawyers and a federal prosecutor were talking about police brutality, the mayor of Syracuse, N.Y. was making an important statement about the necessity of holding down the defense budget.

Mayor Lee Alexander, president of the U.S. Conference of Mayors (a group to which Rizzo pays dues, but one in which he refuses to participate) was making his pitch because he would like to see more federal money given to the cities rather than than pumped into that bottomless rat hole at the Pentagon.

Alexander and other mayors and labor leaders want the present defense budget held at the current level, not jacked up by some $9.3 billion, which is under consideration.

Whether or not Alexander and the others succeed in holding down the defense budget is not really the issue, although it would be nice if they could.

The point is, they are doing something constructive to help the cities.

Makes you wonder what Rizzo is doing besides shouting about—would you believe—a liberal-leftist conspiracy.

URBANOLOGISTS ARE JITTERY OVER THE CARTER APPPROACH

(By Jack W. Germond and Jules Witcover)

Partly as a result of a casual remark President Carter made at a recent White House meeting, his administration is faced with having to calm some very jittery urbanologists—the fancy label for the folks who have been pressuring him on his long-promised national policy for the sick cities.

During a presentation by the Office of Management and Budget and the Domestic Policy Staff that included prospective urban spending for fiscal 1979, the President balked at deciding on any money figure.

His special task force writing a new urban policy had not completed its work, he noted, and nothing had been done to evaluate the existing $50 billion in urban programs. And at one point he asked whether someone experienced directly with urban problems, such as retiring Mayor Fred Hofheinz of Houston, ought to be brought in.

According to one White House domestic policy aide, nobody reacted positively and the suggestion never got off the ground. But the very fact that the President could think, after months of study by his task force, that a Fred Hofheinz ought to be recruited caused many of the urbanologists to worry that the urban policy planning was in a shambles.

They were further unsettled by reports that the usually placid Carter blew his stack because OMB and the Domestic Policy Staff had "placed the cart before the horse" by putting a dollar figure on urban spending next year before the basic policy had been determined and existing spending examined. Administration aides present now deny it. They say he knew well in advance that this procedure was being followed as unavoidable under time constraints.

And while Carter said he was frustrated, the aide specifically added, the President wasn't being critical and "he didn't raise his voice." But Jimmy Carter has a way of expressing dissatisfaction with his eyes, not his voice, and there are some who suggest that while his lips were saying "yes, yes," there was more than "no, no" in his eyes.

The White House types insist now that earlier reports of this meeting made too much of very little; that while the President demurred from the premature price tag being placed on the fiscal 1979 urban program, he never rejected the plans for a comprehensive new policy. As scheduled, they say, it will be unveiled in March, after the task force headed by Secretary of Housing and Urban Development Patricia Harris and White House domestic chief Stuart Eizenstat completes its work.

But over at HUD, there is distinct unhappiness that OMB was able to go before the President with its fiscal 1979 projections. HUD sources complain they were not consulted, and going to Carter with an old-fashioned "shopping list" of existing urban programs ignored the very purpose of the task force. Some at HUD even suggest that in making a programmatic rather than policy presentation, OMB permitted the wants of "a lot of people (in OMB) who were around in the last administration" to be aired.

Prior to the White House meeting, the urban lobbyists were predicting that Carter would be asking from $2 billion to $4 billion for new urban programs. "But now we're getting some weird signals," one of them says. "Somebody's going to get screwed," this urbanologist says, "and we have a sneaking suspicion it may be us."

The other day, representatives of the U.S. Conference of Mayors, the Urban League, the United Auto Workers, the Machinists and the American Federation of State, County and Municipal Employees met with Acting Budget Director Jim McIntyre to express their concern about the possible negative impact on city needs of continued high defense spending.

The ball on urban policy and spending is back now in the court of the task force, formally known as the Urban and Regional Planning Group. Between them, Harris and Eizenstat have cooked up another memo for the President laying out the broad themes and strategies of the new national policy. Still to be determined by Carter is whether on the basis of this memo, which itself lists virtually no figures, the administration should incorporate a price tag for urban programs in the budget going to Congress on Jan. 23. The budget could always be amended in March, when the urban policy message goes to the Hill.

In the meantime, the urbanologists will be trying to read the tea leaves, reacting—very likely overreacting—to every real or inadvertent signal from the White House. And because the group includes some of his most politically important constituencies—the blacks, reformist labor, the nation's big-city mayors—Carter cannot afford to ignore their "sneaking suspicion" that if "somebody's going to get screwed," it may be them.●

INFLATION IN ONE PAGE

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. McDONALD. Mr. Speaker, every day the popular press besieges us with articles on inflation. These articles purport to show how complex a subject it is and present the matter with complicated graphs and the hazy theories of the various economists. However, it is all very simple. Henry Hazlitt, a noted economist, who for some decades has been trying to set us straight, said it all in the May 1978 issue of the Freeman. Inflation is really very simple. It is just the Government printing too much money to cover an unbalanced budget. The article follows:

INFLATION IN ONE PAGE

CAUSE AND CURE OF INFLATION

1. Inflation is an increase in the quantity of money and credit. Its chief consequence is soaring prices. Therefore inflation—if we misuse the term to mean the rising prices themselves—is caused solely by printing more money. For this the government's monetary policies are entirely responsible.

2. The most frequent reason for printing more money is the existence of an unbalanced budget. Unbalanced budgets are caused by extravagant expenditures which the government is unwilling or unable to pay for by raising corresponding tax revenues. The excessive expenditures are mainly the result of government efforts to redistribute wealth and income—in short, to force the productive to support the unproductive. This erodes the working incentives of both the productive and the unproductive.

3. The causes of inflation are not, as so often said, "multiple and complex," but simply the result of printing too much money. There is no such thing as "cost-push" inflation. If, without an increase in the stock of money, wage or other costs are forced up, and producers try to pass these costs along by raising their selling prices, most of them will merely sell fewer goods. The result will be reduced output and loss of jobs. Higher costs can only be passed along in higher selling prices when consumers have more money to pay the higher prices.

4. Price controls cannot stop or slow down inflation. They always do harm. Price controls simply squeeze or wipe out profit margins, disrupt production, and lead to bottlenecks and shortages. All government price and wage control, or even "monitoring," is merely an attempt by the politicians to shift the blame for inflation on to producers and sellers instead of their own monetary policies.

5. Prolonged inflation never "stimulates" the economy. On the contrary, it unbalances, disrupts, and misdirects production and employment. Unemployment is mainly caused by excessive wage rates in some industries, brought about either by extortionate union demands, by minimum wage laws (which keep teenagers and the unskilled out of jobs), or by prolonged and over-generous unemployment insurance.

6. To avoid irreparable damage, the budget must be balanced at the earliest possible moment, and not in some sweet by-and-by. Balance must be brought about by slashing reckless spending, and not by increasing a tax burden that is already undermining incentives and production.●

TUITION TAX CREDITS

HON. JOSEPH L. FISHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. FISHER. Mr. Speaker, the Ways and Means Committee has approved legislation that would allow parents to claim an annual tax credit of up to $250 per child for college tuition paid.

Although I am quite sensitive to the problem parents face in financing their childrens' college educations, I could not support the use of tax credits as a solution. The tax credit approach represents merely token relief. It is costly to the Treasury and unrelated to actual tuition paid. It does not focus relief on families who need it, but provides a windfall to families who do not. And also, because it is likely to encourage colleges to raise tuition, there is no assurance that the taxpayer would benefit in the long run.

During committee consideration of this bill, I voted for an amendment, which failed by one vote, that would have provided more meaningful financial assistance to families with children in college. It would have permitted a tax deferral, amounting to a low-interest loan. All amounts deferred, plus 3 percent per year interest, would have to be repaid by the beginning of the 10th year, following the child's graduation from college.

Under the tax deferral approach, parents with two children in college, for example, could defer payments of as much as $2,000 in taxes in 1978, as compared to a $200 credit in 1978 under the committee-approved bill. A deferral would provide cash at a time when cash is short and require payment after the cash crunch of educating children has passed. Moreover, since the tax would ultimately be paid, the cost to the Treasury in terms of uncollected tax revenue would be minimal. And this approach would not require singles, marrieds without college-age children, retired persons, and others to pay taxes to make up for the tuition tax credits. I expect that this deferral approach will be offered again during debate in the House of Representatives and I expect to support it.

The bill before the committee originally contained a provision for a tax credit for elementary and secondary school tuition. I voted with the majority to delete that provision. The constitutionality of a credit for elementary and secondary education is questionable under the first amendment to the Constitution. The U.S. Supreme Court has held that an income tax deduction for children attending a nonpublic secondary or elementary school in an amount unrelated to the actual cost of tuition violated the separation of church and state doctrine in the first amendment. In line with that decision, the U.S. Attorney General informed the Secretary of Health, Education, and Welfare in March that the tax credit proposals before the Congress would, in his opinion, be held unconstitutional if they involved aid to elementary and secondary schools.

The cost of providing tax credits for elementary through postsecondary schools as proposed in the bill originally before the committee would be considerable, increasing the budget deficit at a time when it is already too high. According to some estimates, the loss to the Treasury would exceed $1 billion in the early 1980's. Since it was primarily the private schools that lobbied for the credit at the elementary and secondary level, I would expect those schools, simply to raise their tuition by the amount of the credit, thus offsetting any tax relief for the individual paying tuition.

Also, the proposal could lead to the public schools charging tuition in order that they could derive a benefit from this form of Federal revenue sharing. This result has been characterized by some as the undoing of our free public schools that have become an integral part of the American society.●

HOUSE-SENATE CONFERENCE ON ENERGY

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. BROWN of Ohio. Mr. Speaker, the leadership and a few selected members of the House-Senate conference on energy have been meeting for months in secret, contrary to the rules of the House. In reaffirmation of those rules, on April 13, the House voted overwhelmingly, 6 to 371, not to allow closed conference meetings. They continued nonetheless.

Then, on April 21, much fanfare and public noise was made about an alleged agreement by the select, secret group. As a duly appointed member of the conference, I have been waiting anxiously to learn what this mysterious agreement may be. So far, I have waited in vain.

Now I am led to understand that the secret conference is to reconvene this afternoon. I do not know if there is really an agreement or not. But I do know the House rules are being violated again.

Mr. Speaker, I do not want this to become a partisan matter. The protest against this process has been broad-based, encompassing a great many Members of both parties. But I can no longer refrain from pointing out that this travesty is being perpetrated on the Congress and on the American people by the leadership of the Congress and the conference; and that leadership is Democratic.

A great many leading elected officials of the Republican Party gathered informally this past weekend at Easton, Md., to discuss major issues on which our party would like to take a stand. In addition to the five broad philosophical resolutions proposed in advance and ratified with amendments by those attending, there was one additional resolution adopted. I proposed it, because I felt it was important for the American people to know the position of the Republican Party on this issue. Let me share the resolution with you:

The inability of the Carter Administration and the Congress controlled two to one by Democrats to create a national energy program after a year of factional squabbling in secret meetings is clear evidence of the failure of national leadership by the Democrats. It is adversely affecting our domestic and international economic relationships and is a threat to our nation's future. The Republicans urge the Democrat leadership to promptly hold open meetings of all members of the congressional conference on energy to resolve this vital issue in public as the rules of the Congress require.

It passed unanimously.●

THE TRUTH ABOUT THE VA MEDICAL SYSTEM

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. TEAGUE. Mr. Speaker. I continue to receive a large volume of mail from veterans and their families expressing their deep concern about the future of the VA medical system. These concerns are centered on the alarmingly inadequate budget that is to be considered in the first concurrent budget resolution.

In 1945 and 1946 when the current VA medical system was being restructured from a virtual medical slum, the architects of the program, Gen. Omar Bradley, Dr. Paul R. Hawley, Dr. Paul B. Magnuson, and countless others told the House Veterans' Affairs Committee that to provide quality care in medical institutions, such as those operated by the Veterans' Administration, medical education and medical research programs were essential. There were many who doubted the wisdom of this philosophy. The law establishing the post World War II Department of Medicine and Surgery was saved from veto at the 11th hour by the personal intercession of General Bradley with the President. The President had been advised by the then Bureau of the Budget to veto the bill, and I am convinced that that organization including its successor, the Office of Management and Budget, has never altered its dedication to destroy this fine medical system for veterans. In more recent years the Department of Health, Education, and Welfare has joined in this effort.

Until the present period, the veterans medical program has delivered quality care to those veterans seeking treatment for their disabilities, illnesses, and injuries. Quality medical care in the VA medical program was brought about with the establishment of research and medical educational activities going hand in hand with treatment of patients. Today, the VA hospitals are affiliated with 103 of the 121 approved medical schools of this country as well as all of the 58 approved schools of dentistry. An estimated 9,000 of the country's outstanding physicians serve in this medical system as consultants. Twenty-six percent of all physicians undergoing graduate medical education (specialty training) receive it in VA hospitals. Over 50 percent of the total medical students of this country receive some part of their education in VA hospitals. The VA medical research program has become world renown.

Just this past October two of its outstanding research investigators received the Nobel Prize for research in medicine. This research program is credited with ridding this country, as well as other lands, of the dread disease of tuberculosis, developing the cardiac pacemaker, being the major contributor to the chemotherapy treatment to improve patients suffering from mental disorders, the rehabilitation of paraplegics and quadriplegics due to spinal cord injuries, the fitting and training of amputees with VA-developed prosthesis, as well as many others.

Just this morning the president emeritus of a very prominent health science school advised me that the best place for medical education and training for physicians and allied health care students in this country was in the Nation's VA hospitals.

I have heard all the rhetoric about the so-called improved efficiency of the VA hospitals and how they can treat more and more veterans with fewer staff and less money. This is "statistical double talk," and it is not going to happen. One highly placed VA medical official recently indicated that the fiscal year 1979 proposed bed and budget reduction would severely limit the VA system's ability to expand nonacute hospital beds capable of meeting the needs of the aging veteran through 1995. The veteran population, 65 years of age or older, will increase by 124 percent by 1985 and by 264 percent by 1995. This official added that the restoration of the beds proposed to be cut in fiscal year 1979 and the funds and resources related to this bed cut would be of both immediate- and long-range benefit to the VA's ability to meet both its current- and long-range patient requirements.

Mr. Speaker, as I have indicated previously, the Office of Management and Budget has never changed its "stripes" in regard to the destruction of the veterans' medical program. While I realize that the Veterans' Administration has no choice but to support the "statistical double talk" put forth by the Office of Management and Budget, it indeed comes as a surprise when I hear the same thing from the Committee on the Budget. It raises the question, is there someone on the staff trained in the OMB and the Department of Health, Education, and Welfare with the same dedication toward the destruction of this program that I have witnessed for the past 30 years? This causes me great concern. If Members of the House of Representatives do not support the VA medical program with sufficient funds, its demise is near.

Mr. Speaker, this is the "truth about the VA medical system" as I know it. I wanted to share this with all of my colleagues and urge their support of Chairman RAY ROBERTS when he proposes an amendment to the first concurrent budget resolution to adequately fund this outstanding medical program in fiscal year 1979.●

MARVIN McLELLAN—SAGE OF THE SANDHILLS

Hon. G. V. (SONNY) MONTGOMERY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. MONTGOMERY. Mr. Speaker, one of the most beloved men and respected public speakers in Mississippi was the late Marvin Mitchell McLellan. His speaking ability and philosophy of life earned him a following not only in his native State of Mississippi, but throughout the Nation. Prior to his untimely death in 1973, Mr. McLellan known as the "Sage of the Sandhills" was speaking before as many as 150 audiences a year. He also won acclaim as a dedicated and highly responsible employee of the Soil Conservation Service and received the Superior Service Award in 1968. Since Mr. McLellan's death, his son, Joe McClellan, has published many of his father's speeches. While they are too extensive to include at this point in the RECORD, I would like to include the following which sums up the philosophy of life of Marvin Mitchell McLellan:

TEN NEW COMMANDMENTS

(By Marvin McLellan)

The great need today is for us to understand the need of getting along with ourselves and the people about us. In getting along with ourselves and others, there are ten commandments we would be wise to follow. They are as follows:

(1) Keep skid chains on your tongue; always say less than you think. Cultivate a low, persuasive voice. How you say it often counts more than what you say.

(2) Make promises sparingly and keep them faithfully, no matter what it costs you.

(3) Never let an opportunity pass to say a kind and encouraging thing to or about somebody. Praise good work done regardless of who did it.

(4) Be interested in others; interested in their pursuits, their welfare, their homes and families.

(5) Make merry with those who rejoice; with those who weep, mourn. Let everyone you meet, however humble, feel that you regard him as one of importance.

(6) Be cheerful. Hide your pains, worries and disappointments under a smile. Laugh at good stories.

(7) Preserve an open mind on all debatable questions; discuss but not argue.

(8) Let your virtues speak for themselves, and refuse to talk of another's vices.

(9) Be careful of another's feelings. Wit

and humor at the other fellow's expense is rarely worth the effort.

(10) Don't be too anxious about your dues. Do your work and be patient. You will be rewarded.

If we do these things then I'm sure we will be able to get along with others. We'll surely be able to live peaceably with all.●

RICHARD VOLPERT

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. WAXMAN. Mr. Speaker, we offer our praise to many fine citizens by memoralizing their achievements in the CONGRESSIONAL RECORD, but it is not very often that we can record so long and distinguished and varied a lifetime of contributions to his profession and his community as those accomplished by Richard S. Volpert of Los Angeles. Valley Beth Shalom of Encino is honoring Richard Volpert as Man of the Year at a dinner June 3, 1978, and it is a great pleasure to ask the Members to join me in sharing this occasion with Mr. Volpert's countless friends.

Receiving his B.A. at Amherst College, Richard Volpert went on to earn a law degree at Columbia Law School, and received honors as a Stone scholar. He served as editor and chairman of the California State Bar Journal 1972–73 and on the Journal Committee from 1970 to 1975; on the Board of Trustees of the Los Angeles County Bar Association 1968–70 and its Real Property Section chairman 1974–75, and on the Executive Committee since 1968. He was editor and chairman of the Los Angeles Bar Journal 1965–67, and served on the Committee on the Administration of Justice, California State Bar Association from 1973 to 1976. Mr. Volpert was director of the Western Center on Law and Poverty 1971–75, and Director of the Los Angeles Neighborhood Legal Services Society 1969–71. He has been a member of the Board of Councilers at the University of Southern California Law Center since 1976. He has been a trustee of the Los Angeles County Natural History Museum Foundation since 1974, secretary 1976–77, and vice president since 1977; president of the Amherst Club of Southern California 1972–73, vice president 1970–72, and a board member since 1968.

Richard Volpert's community involvements are equally impressive: he has been on the Board of Directors of the University of Judaism since 1973 and is chairman, Center on Contemporary Jewish Life. He has been honored with the University of Judaism Merit Award.

He has served on the Community Relations Committee, Jewish Federation-Council of Los Angeles since 1965; as chairman since 1977; vice chairman 1975–77 and has been chairman of both the Commission on Law and Legislation as well as the Joint Committee on Club Discrimination. Mr. Volpert has been a board member of Valley Beth Shalom in Encino, Calif., since 1964. He was Youth Committee chairman, Adult Education Committee chairman, vice president, Temple Activities; chairman of the board; has been chairman of the Building Committee since 1975. He was chairman of the Council on Jewish Life, Jewish Federation Council 1976–77.

Mr. Volpert served on the Executive Board of the Los Angeles Chapter of the American Jewish Committee, chaired its Civil Rights and Civil Liberties Committee and its Social Club Discrimination Committee. He was a member of the Executive Committee of the Antidefamation League of B'nai B'rith and has been a member of the Pacific Southwest Regional Board in 1964; vice president of the Pacific Southwest Region of the United Synagogues of America. He has been chairman of the Land Use Task Force of the Los Angeles Area Chamber of Commerce since 1973 and was a member of the Executive Committee of the Los Angeles Region Goals Council. His memberships include American Bar Association, Real Property Law and Local Government Law Sections; Los Angeles County Bar Association; University Club of Los Angeles, American Society of Planning Officials; Urban Land Institute, Central City Association; and Fellow, American Bar Foundation.

One wonders how a single individual could have managed to hold so many active community posts, but Richard Volpert has, in addition, found the time to write and lecture on various aspects of California land use and real estate law.

Richard and his wife, Marcia, have four children: Barry, Sandy, Linda, and Nancy. I know that his family will join all of us in honoring this man who has contributed so greatly to his profession and to his community.●

SILVER ANNIVERSARY FOR VILLA JULIE

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

Ms. MIKULSKI. Mr. Speaker, I would like to take this opportunity to add my support to the salute of Villa Julie College, which is celebrating its 25th anniversary this year. Villa Julie has contributed greatly to Baltimore since it was established in 1953 and deserves our praise.

I would like to bring to my colleagues' attention the article from the March 22 Evening Sun and an editorial broadcast by WJZ–TV to commemorate Villa Julie's anniversary:

[From the Evening Sun, Baltimore, Mar. 22, 1978]

VILLA JULIE, 25

The most endangered of endangered species in higher education is the private two-year college. The public community colleges have dotted the map, opening their doors to nearly everyone at low cost. Stunned by the competition, the private junior colleges—all but the most adaptable—have fallen by the wayside.

But not Villa Julie, celebrating its 25th birthday this academic year. Villa Julie's name and its pastoral setting on 60 acres in Green Spring Valley belie its heavy career orientation with a liberal arts underpinning. The school has changed with the times cunningly, tossing off its religious habits, going coeducational, spotting career trends ahead of competitors—and growing by 200 percent over the past eight years. This Saturday's conference on women in research is part of the year-long celebration. "The best is yet to be."

SILVER ANNIVERSARY FOR VILLA JULIE

(By Stephen H. Kimatian)

In the past quarter century this country has suffered the loss of hundreds of private colleges. Usually they have been victims of inflation and competition with expanding public institutions. That's why we celebrate a college in the Baltimore area that has defied the odds and is observing its 25th anniversary.

It's Villa Julie College out in the meadowlands of the Green Spring Valley, the only private two-year institution in Maryland. The college was founded in 1953 by the sisters of Notre Dame de Namur. In 1967 it severed its formal connections with the order and is now independent of any religious affiliation.

Villa Julie flourishes for many reasons. One of them is its president, Sister Mary Stephen Manuszak who, incidentally, is the first nun in the history of Maryland to be licensed to practice law. Another reason for the college's success is its emphasis on career programs such as medical secretarial and paralegal courses, with a strong foundation in the humanities. It has an amazing record for placing its graduates.

Villa Julie isn't rich—like most private colleges it must constantly seek donations and grants. But it has reached its silver anniversary as a unique institution, making a major contribution to education in Maryland.

A THANK YOU TO SENATOR GOLDWATER

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. SYMMS. Mr. Speaker, I wish to thank and commend the senior Senator from Arizona for his remarks yesterday on the resignation of Gen. John K. Singlaub. Senator GOLDWATER expressed his concerns on a situation which is growing more serious every day. General Singlaub was correct in his denunciation of President Carter's proposed troop withdrawals from South Korea and more recently for the President's decision to defer production of the neutron warhead. Singlaub's statements about the President's foreign and defense policies were the result of his deep concern for our country's national security and were based on years of experience as a dedicated career military officer. General Singlaub could have remained in his present position if he had not spoken out and challenged some of President Carter's unfortunate policy decisions. But because Singlaub is dedicated to preserving peace and his country's national security, he voiced his concerns and forfeited his office. Senator GOLDWATER expressed my sentiments exactly when he said:

In his [Singlaub's] differences with President Carter, I say the wrong man resigned.

NATIONAL ARCHITECTURAL BARRIER AWARENESS WEEK, 1978

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. NOLAN. Mr. Speaker, on April 24 the President signed House Joint Resolution 578 into law (Public Law 95-267). As an outgrowth of that act, he issued a proclamation designating the third week of May in 1978 as National Architectural Barrier Awareness Week. I would like to share the text of that proclamation with my colleagues:

NATIONAL ARCHITECTURAL BARRIER AWARENESS WEEK, 1978

(By the President of the United States of America)

A PROCLAMATION

Physical access is often the key to whether people can enjoy their rights and freedoms, and exercise their responsibilities. Every day, however, millions of elderly and handicapped Americans are denied access to places of employment, houses of worship, shops, schools, public services, recreational areas and many other facilities that other Americans take for granted.

If all Americans are to have true access, we must remove the architectural barriers in our society that block some of our people from full participation and self-reliance. We must also remove the barriers of attitude and custom that have prevented many people from doing what they can.

The Congress expressed its commitment to the removal of physical barriers from Federal buildings by enacting the Architectural and Transportation Barriers Act in 1968. The Architectural and Transportation Barriers Compliance Board, created to enforce that act, will soon launch a national media campaign about barriers using the slogan, "Access America."

This Administration has taken steps to improve the access of handicapped citizens by issuing regulations under Section 504 of the Rehabilitation Act which require recipients of federal financial assistance to improve the accessibility of their programs to the disabled. We have also proposed a loan fund to assist institutions to pay for physical alterations when needed.

Many of the barriers that block people from opportunity and fulfillment are not subject to Federal regulation. Their elimination will require awareness and concern on the part of business and industry, state and local governments and organizations of all sorts, as well as individuals, in order that our society may provide access for full participation to all our people.

To encourage public awareness of the problems of such barriers, the Ninety-fifth Congress has adopted a joint resolution (H.J. Res. 578) requesting the President to issue a proclamation designating the third week in May of 1978 and of 1979 as National Architectural Barrier Awareness Week and calling for its appropriate observance.

Now, therefore, I, Jimmy Carter, President of the United States of America, do hereby designate the third week of May, 1978 as National Architectural Barrier Awareness Week and ask all Americans to do all that lies within their power to remove these unnecessary barriers and to eliminate any lingering social and psychological stigma surrounding disabilities. Together we can make access a reality for all Americans.

In witness whereof, I have hereunto set my hand this twenty-fifth day of April, in the year of our Lord nineteen hundred seventy-eight, and of the Independence of the United States of America the two hundred and second.

JIMMY CARTER.●

RAIN ON SUN DAY—PART I

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. McDONALD. Mr. Speaker, along with the majority of my colleagues, I supported the bill to designate May 3, 1978 as Sun Day. This bill was presented as a means of promoting consideration of solar energy as a supplement to large-scale power production.

However, it is now clear that the Sun Day staff and activists are the same group of technophobes and hypocritical advocates of a lowered standard of living which has plagued us since Earth Day. In fact, Sun Day is being run by the same individual who ran Earth Day—as a project financed by big money and acted upon by leftists.

The nature of this superficially odd alliance is examined in the May issue of American Opinion magazine by Dr. Susan Huck.

The article follows:

SUN DAY—PART I

It was odd to see the year 1910 praised in the pages of *Foreign Affairs*, quarterly journal of the elitist Council on Foreign Relations. In 1910 the United States did not even have a C.F.R., much less did we groan under its yoke. Those who would become its founders and members were still plotting to put over on us a Federal Reserve System and a graduated income tax—two vital measures for grabbing us by the throat which were approved by Congress in 1913. Something like the phony clamor for the Equal Rights Amendment, you remember, was required to complete legalization of the Income Tax Amendment in 1916. It was going to "soak the rich," who were its only sponsors.

So it was a surprise to see 1910 praised in *Foreign Affairs* of October 1976 by British "Friend of the Earth" Amory Lovins. "What would life be like at the per capita levels of primary energy that we had in 1910 . . . ?" he asked. "Could it not be at least as agreeable as life today?"

When C.F.R. types offer you an agreeable life, you can be reasonably certain they're up to something. For instance, in between the little dots above was the statement that our per-capita level of primary energy in 1910 was "about the present British level." Mere common sense rings alarm bells. In 1910, rural electrification was unheard of in the United States, very few people indeed were driving horseless carriages, and hardly anybody was flying around in airplanes. While British domestic arrangements are notoriously backward (the British view toward winter having been that if you continue to ignore it, eventually it will go away), my perception of Great Britain, even in these parlous times, is not that of America in 1910. And my facts at hand say, for example, that "the present British level" of electricity consumption is about 5,000 k.w.h. per capita annually, whereas ours was about 200 k.w.h. per capita in 1910. I don't know what other "primary energy" the C.F.R.'s boy Lovins had in mind, but it would certainly take one *awful* lot of horses and firewood to make up the difference.

So what is the Lovins game in conjuring up images of the lusty, confident, free, united, and relatively innocent and uncorrupt America before it came under the yoke of the Council on Foreign Relations? It is part of a very large game—nothing less than the creation of a New Feudalism for the Twenty-First Century! These people do think big! They think the world and its inhabitants are their property, responsibility, and playthings—an attitude which develops naturally among a ruling class which apparently does not believe in God and perceives in that case a big power vacuum to be filled by themselves.

It is for this reason that one encounters the employee polemicists of the ruling class at such places as the Worldwatch Institute in Washington, like the C.F.R. another Rockefeller front, who blandly say that they expect to have human reproduction under control and the world's population stabilized at eight billion by about 2025 A.D. By no chance whatsoever, that is the year mentioned by other minions, such as Mr. Lovins, for having us reduced to the pre-capita primary energy consumption level of 1910.

You will recall the propaganda assault on the automobile, which began maybe ten or so years ago. Cars were suddenly discovered to be trashy, unsafe, expensive, and vaguely sinful. Then came Nader and the federal government, and now you have a car which is half the size and twice the price, which can hardly climb the ramp out of the parking garage, and which nags you if you don't do as Big Brother wants.

It would have been impolite to have announced, "Attention, masses! It has been determined that you have no need for means of personal mobility. Turn in your cars at once." No, this gang is willing to give it a generation of the slow squeeze, the steady propaganda—more taxes and more sermons, more cartel prices and more regulations. What Lovins deplores as "means of personal mobility" will gradually be withdrawn from the public, and the public will think it is natural, inevitable, and even desirable. And that will be an amazing feat of manipulation—if it works.

Which brings us to Sun Day. When it was discovered that Sun Day (Wednesday, May third) was under the same Rockefeller management as Earth Day (April 22, 1970), it seemed worth checking. Both clamor-generating "movements" were under the direction of Denis Hayes, an employee of the Rockefellers' Worldwatch Institute, and the Earth Day hullabaloo was marvelously productive of new regulations and bureaucracies—giving us a not-so-little thing called the Environmental Protection Agency.

Sun Day has a downtown Washington office with sixteen paid employees and apparently unlimited funds for printing and distributing its propaganda. While poor-mouthing about its current finances, Sun Day official Richard Munson said they had only "small" donations—five thousand here, five thousand there, you know, from Leftist-led unions and the big "capitalist" foundations, including those of the Rockefellers. He said they had not yet received their government money, but he was serenely confident that they would, and he expected that "an international WATS line" would be provided to them by the United Nations.

Sun Day headquarters, nonetheless, seemed a rather third-rate clamor-generating operation. Perhaps some of the glamor has gone out of such "movements" since 1970. I left with the impression that even the staff thinks maybe 1979 will be better than 1978. While this "spontaneous movement" was initiated last September, the four-figure contributions did not begin to arrive until January, at which point the paper and the publicity began to flow, and regional coordinators could begin organizing around the country. If you go for solar heating they will gladly cover

your roof with glass, fill your basement with rocks and water, and the space between with pipes and ducts, pumps and blowers. For what proponents advertise as a mere eight thousand dollars or so, you could obtain perhaps half to two-thirds of your winter heat from the sun. Of course, *if* you propose to remain warm even on cloudy, rainy, snowy, or icy days, you will still need a furnace, and nobody ever mentions the cost of the electricity required to run all those pumps and blowers. Eventually, further clamor will be generated, demanding that the furnaces be replaced by wood stoves and fireplaces, as the *demarché* to 1910 continues. You could also wear heavy socks, sweaters, and scarves indoors and allow yourselves to be royally entertained by chilblains, rheumatism, and arthritis.

And the campaign has begun. In a recent press release from Worldwatch Institute and Denis Hayes we learn: "Solar coalitions around the country are planning alternative energy fairs, tours of solar energy facilities, sunrise ceremonies and concerts, lecture series, marches and parades and at least one flotilla of hot-air balloons. By mobilizing a wide band of environmentalists, farmers, organized labor, urban poor, consumers, and other interest groups, Solar Action hopes to educate a national constituency that will bring to demand for solar energy the priority it merits." Hayes rejects all other suggested replacements for petroleum-based fuels, insisting that solar energy is the only answer to our nation's vast energy needs.

You do get the point of why the Rockefellers would fund a con game like this. The object is not only power but profit from all of those lovely oil wells pumping black gold at cartel prices. But, the chief objective is power. As the *Patterson Strategy Letter* for February 1977 reported:

". . . Meanwhile, the Rockefeller brothers Fund blueprint for a low-energy economy has been released in a day-long symposium on Capitol Hill. . . . The report was called 'The Unfinished Agenda.' Written by a Rockefeller group, called the Worldwatch Institute, this report could be called a *blueprint for the total destruction of U.S. industry*, through a combination of energy cutbacks, coupled with a five-fold increase in energy prices! . . . It calls for a 'conserver society,' where electricity generation is not thermodynamically justified. Fission energy should be phased out and fusion energy research eliminated. To replace them—(wait for it)—*the sun, the wind, organic materials and geothermal heat* . . . The report calls for the conversion of wood into liquid methanol, and the recycling of sludge (human excrement) into fertilizer. The development of these energy sources is to be paid for by the taxation of existing fossil fuel consumption. . . . The taxes would (in several steps) drive the cost of a barrel of oil to $100—and of natural gas to $16 per 1,000 cu. ft. This is to occur in a number of tax steps, the first being a $20 per barrel oil tax and a tax of $3.50 per 1,000 cu. ft. for natural gas."

Don't miss the point of why America must be driven to its knees. How else can a New World Order be worked out with the Communists on a basis of equality? People like Denis Hayes are hired revolutionaries but they are also ideologues. Denis was twenty-six when he was employed to coordinate Earth Day, back in 1970. As a veteran now of thirty-four, he is employed by the same gang to bring us Sun Day. The choice of dates is always interesting. April 22, 1970, was a "religious" holiday in the Communist-run countries, the centenary of the birth of Lenin. Arranging to have massive demonstrations by American youth on that particular day struck some of us as suspicious. It was such an awful pun—Earth Day, B-earthday, you know. Well, this time Sun Week exactly spans May Day and the birthday of Karl Marx, so that once again Americans will be demonstrating during the Communist holidays.

One look at the Sun Day letterhead and none of this is surprising. Although containing its quota of loons, the group Hayes has gathered consists mostly of hard-eyed *apparatchiks*. "Pink diaper baby" Jeremy Stone, son of the hoary radical propagandist I. F. Stone; Heather Booth, wife of Paul Booth, both of them founders of the violent Students for a Democratic Society; Hazel Henderson, coordinator for New Leftists who have wormed their way into state and local public offices; Byron Kennard of the Harrington out-of-the-closet Socialists; plus, the usual array of Naderites and militant ecofreaks with dried breakfast on their beards.

And that's not all. One remembers that Walter ("Yours for a Soviet America") Reuther pushed Earth Day; his successor as United Auto Workers boss is Douglas Fraser, who is gung-ho for Sun Day—even though the merest tyro could not miss the point that the goal includes getting "the masses" permanently out of their U.A.W.-produced automobiles. Fraser is one of the most ardently radical of American union officials—and he is joined on the Sun Day letterhead by the new head of the International Association of Machinists, William Winpisinger of the Democratic Socialist Organizing Committee, a pro-Eurocommunism front.

"Blacks" are represented by Robert S. Browne of the Black Economic Research Center, who two years ago spent our Bicentennial period in the streets with the Castroites, and the Reverend Doctor Lucius Walker, one of the black preachers Nelson Rockefeller patronized while governor of New York. The Reverend Doctor is, as a result, an official of the National Council of Churches.

Easing ever Establishmentward, we find Mayor Bradley of Los Angeles and officials of the Jerry Brown Administration, a few Congressmen and the late Senator Hubert Humphrey, officials of companies engaged in making solar-energy equipment, and to cap the climax, a representative of the Club of Rome, which is up there with the Bilderbergers and the Trilats in world ruling-class circles. The Clubbers of Rome are the neo-Malthusians who sagely confirmed with their computers that the world will end shortly. At the same time, they confirmed that fine old saw of the computer business, "garbage in, garbage out."

This time, as last time, these lugubrious doomsayers are making propaganda to reduce our standard of living and weaken America, and Sun Day is just part of the program. Oh, it's also good practice. The care and feeding of phony mass movements is quite an art. Eventually, perhaps, it will become a function of the state religion. The traditional churches can be taught to participate, as a Sun Day document explains. Ministers are urged to give sermons on solar energy and "pray for sunny skies on Sun Day." Church choirs ought to "write and sing new gospel spirituals about the sun." Sunday-school children can do "solar artwork," and adult church members, if they do not wish to observe Sun Day by debating "national energy policy" or by carping over the church heating bill, could do so by installing "solar collectors or windmills for the church."

Most important, however, the Sun Day propaganda says the church should "act as a tax-deductible funding conduit" and "provide space and telephone for the local Sun Day coalition."

Tax-exempt foundations are financing a blizzard of paper from Sun Day headquarters, so that spokesmen can say "We expect that communities all across the country will create their own ingenious events to celebrate the sun." Nevertheless, my guess is that despite all the ruling-class instructions to teachers, students, union leaders, public officials and preachers, Sun Day will not even begin to compare with Earth Day. Not this year, at least—maybe next year. Whatever manifestations of allegedly spontaneous mass support may occur—and that means however pitiful they may be—the show can still be foamed up into a great happening by the press, and carried forth to Congress as a basis for considering new legislation. That is a very old game.

The trouble is that people do occasionally wise up—which is why these con men always reach for young people, who haven't wised up yet. But it is not as easy in 1978 as it was in 1970 to convince even the most ignorant pro-to-hippy that the oceans will die in 1979 as was predicted in 1969 by Barry Commoner. Having sampled this idea of freezing in the dark in order to prevent pollution, and having priced the new cars and read about the air-bag menace, having sampled the arrogance of the Oshacrats, the inverted priorities of the Environmental Protection Agency, and the idiot-level publications of the Consumer Product Safety Commission, Americans are thinking they could do with a lot less "protection" from Big Brother. As for clamoring to have our standard of living reduced, which is the object of Sun Day's organizers, now there's a notion which may also have seen better days. Part of the clamor is supposed to be for a more "labor-intensive" economy. This theme was sounded several years ago when Laurance Rockefeller wrote in Reader's Digest about the joys of chopping wood for the stove. From time to time, the Great Conservationist may actually have his chauffeur drive him to a point from which he can watch the servants chop wood. Some of us still recall the time when his brother Nelson, as Vice President, flew by personal jet to Chicago to give an address on energy conservation, and then jetted back to Washington. They're putting us on, and Americans are getting wise.●

WHY DEREGULATION OF STRIPPER WELL AND DEVONIAN FORMATION NATURAL GAS BY THE ENERGY CONFERENCE COMMITTEE WOULD HELP ASSURE SUPPLIES FOR THE ENERGY STARVED NORTHEAST AND MIDWEST

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. KEMP. Mr. Speaker, for several years I have been bringing to the attention of the House the potential of natural gas from the Devonian shales which underlie most of the Appalachian States. I have also pointed out on several occasions that production of natural gas from these States from other geologic formations has maintained a nearly constant level of between 400 and 450 billion cubic feet per year since 1920, over 55 years.

On April 10 the American Gas Association released its annual report detailing the results of drilling for natural gas in the United States in 1977. The data are again discouraging.

Continuing a trend begun in 1972, more natural gas was produced in the

United States than was found through new drilling or through reevaluation of reserves of past discoveries. Even though more wells were drilled in 1977 than in any year since 1959, only 11.9 trillion cubic feet of natural gas was added to proved reserves. We produced, however, 19.5 trillion cubic feet. If we maintain our current production rate, total reserves, and these include gas on the North Slope of Alaska, of conventional gas supplies of 209 trillion cubic feet will last for only about 10 years.

In contrast to this national trend, however, has been the revival of drilling, and drilling success for finding natural gas in the Appalachian region, as shown in the following tabulation of new reserves discovered and production during the last 2 years.

New reserves and production of natural gas in the Appalachian region—1976 and 1977

[Billion cubic feet]

State	New reserves		Production		R/P ratio	
	1976	1977	1976	1977	1976	1977
Pennsylvania	142.9	281.7	90.0	92.3	1.58	3.04
West Virginia	172.2	187.7	150.6	147.3	1.15	1.27
Ohio	146.7	167.0	89.6	99.6	1.63	1.67
Kentucky	21.9	20.0	58.5	56.7	0.37	0.35
Virginia	15.9	20.9	6.9	8.2	2.30	2.55
New York	40.0	14.0	9.2	10.0	4.36	1.40
Total	539.6	691.2	405.0	414.1	1.33	1.67

To summarize the data, the search for natural gas in the Appalachian region has resulted in more gas being found than is being produced, assuring a greater local supply to consumers in the future. In 1976 the R/P ratio, the ration of new reserves to current production was 1.33. Meaning that all gas produced was replaced through drilling and one-third more gas was added to inventory or reserves. Last year the results were even better, two-thirds more gas was added to reserves after replacing current output. Most noteworthy, three times as much gas was found than produced in Pennsylvania in 1977.

Such success has not gone unnoticed in the natural gas industry. Almost twice as many drilling rigs are now active in the Appalachian region than were drilling only 1 year ago, as the following statistics illustrate:

Active drilling rigs in the Appalachian region

	Mar. 20, 1978	*Mar. 3, 1977*
Pennsylvania	26	11
West Virginia	22	9
Ohio	42	27
Kentucky	3	1
Virgina	0	1
New York	5	3
Total	98	52

Source: Hughes Tool Company.

To maintain and expand this drilling effort for natural gas it is essential that pending legislation before the Congress on natural gas be enacted into law. It is my understanding that the conference committee has included provisions in both the House and Senate versions of the natural gas bill which give incentives to both stripper natural gas wells and for wells which produce from Devonian shale and other unconventional gas sources. In my view, and I believe in the view of many of my colleagues from the Appalachian States, these provisions are beneficial to both producers and consumers of natural gas in the region.

I urge the conferees to complete their work and allow the Nation to begin immediately to reverse the trend in natural gas supplies from conventional sources and provide an inducement to develop the vast potential of additional supply from Devonian shales, gas from coal seams, geopressurized brines, and tight sandstone formation which are not now economic.●

SUN DAY: ANOTHER CHANCE TO SHINE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. RANGEL. Mr. Speaker, I would like to bring to the attention of my colleagues and the Nation that tomorrow May 3 is Sun Day. One of the country's most pressing issues is the question of where we will get our energy in the future. In the past century, our society has become wholly dependent on oil, gas, and coal. Dependence on these forms of energy has placed us in a vulnerable position because we have exhausted most of these nonrenewable resources. The dangers that we face are obvious. Our major cities would be paralyzed, our rural population would become isolated. The country would be hopelessly crippled.

As we become more and more aware of the finite amounts of energy available from the Earth, it becomes necessary to immediately turn our attention to an endless supply of energy; the sun. Sun Day's purpose is to make people aware of the critical importance of solar energy to the future of the world.

I am sure that you all remember the tremendous success that Earth Day enjoyed in 1970, and how it subsequently made Americans more aware of our environment. That was made possible by the enthusiasm shown by those taking part. That same enthusiasm will make Sun Day as successful as Earth Day, and will mark a major step by our country toward energy independence. I hope that my colleagues will join me in thanking the organizers, and pledging support to Sun Day.●

BACK TO THE DRAWING BOARD

HON. DAN MARRIOTT

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. MARRIOTT. Mr. Speaker, although horror stories about the regulatory agencies and their abuses abound, seldom are we presented with a case in which these abuses result in death. Unfortunately, tragedy was the result of one uninformed regulation promulgated and enforced by the National Highway Traffic and Safety Administration.

The faulty performance of anti-lock devices required by an NHTSA regulation has been responsible for many accidents involving semi-trailers and buses. To date at least 16 deaths can be directly attributed to the regulation requiring the use of this device.

As you may recall, last year, I sponsored a resolution to suspend the enforcement of the NHTSA requirement of the faulty anti-lock breaking device. The administrator, Joan Claybrook, chose to ignore the issue.

Luckily the U.S. circuit court has ruled on a case brought by PACCAR Inc., the Truck Equipment and Body Distributors Association and the American Trucking Associations. The decision stated the critical issue:

> The agency has a heavy responsibility . . . to ascertain, with all reasonable probability, that its regulations do not produce a more dangerous highway environment than that which existed prior to governmental regulation.

I commend the editorial by Robert Bleiberg from the April 24 Barron's magazine to my colleagues:

BACK TO THE DRAWING BOARD—THE FEDERAL SAFETY JUGGERNAUT HAS COME TO GRIEF

Picture the scene. Loveland Pass west of Denver, downhill and dirty all the way. Into camera range come Curly and Jud, one behind the wheel of their custom-built Kenworth, best big rig in the business; the other flaked out in back. High-balling along at 65 miles per hour, 10 m.p.h. over the legal speed limit, Curly (the clean-cut hippie type) suddenly sees a mother cat, followed by her kittens, stroll casually onto the highway. A confirmed cat-lover (clearly established earlier in some cute by-play with a waitress at the truck stop), he jams on the sophisticated new "strong brakes" with which his vehicle by law must be equipped. The computerized anti-lock system malfunctions, the rig jackknifes and winds up in a ditch. A shaken Curly climbs down from the cab; he's speechless. Jud (tough guy on the surface, but with a heart of gold) isn't. "We're going straight to the National Highway Traffic Safety Administration (NHTSA) in Washington, D.C.," he cries, "and register a complaint." "Then what?" Curly asks weakly. "Then we're going to that famous store front at 1200 15th Street, N.W.," Jud says grimly,

"and punch Ralph Nader right in the mouth."

Though offered free of charge to the producers of "Movin' On," a television series a few seasons back about a hardy pair of independent long-haulers, the scenario cited above never made it to the nation's video screens. Too bad. For whether real life follows art or vice versa, a thorough airing over a nationwide hookup of the unrealistic and dangerous standards for truck and bus brakes imposed by NHTSA, the federal agency created under legislation passed shortly after—and largely in response to—publication of Ralph Nader's *Unsafe At Any Speed*, might have spared the country untold money and grief; it might even have saved lives. In the event, however, only *Barron's* (in particular, our Washington editor, Shirley Scheibla) tried—in the face of a callous and unyielding bureaucracy—time and again to blow the whistle.

Last week the U.S. Court of Appeals for the Ninth Circuit handed down a decision in the case of PAC–CAR Inc. (which builds the Kenworth), the Truck Equipment & Body Distributors Association and the American Trucking Associations, vs. the National Highway Traffic Safety Administration and Department of Transportation. Ruling on a challenge to Motor Vehicle Safety Standard No. 121, which mandated a brand-new braking system, including the controversial anti-lock device, for tractor-trailers and trucks, the jurists found unanimously for the plaintiffs. "The goals of the Standard . . . are both reasonable and practicable. However, after a careful review of the extensive record in this case, we have come to the conclusion that . . . the Standard was neither reasonable nor practicable at the time it was put into effect. . . . Until such time as NHTSA develops evidence that the new braking systems required by the Standard do not create the possibility of greater danger to the public, those parts of the Standard requiring heavier axles and the anti-lock device should be suspended." Then, more sternly: "The agency has a heavy responsibility . . . to ascertain, with all reasonable probability, that its regulations do not produce a more dangerous highway environment than that which existed prior to governmental regulation."

In so finding, the Circuit Court willy-nilly found considerably more. For one thing, despite a truculent show of certitude—each successive change in the regulations was flatly labelled "final"—NHTSA obviously didn't know whether it was coming or going. To illustrate, the agency repeatedly postponed the date on which Standard No. 121 was to take effect; originally scheduled for Jan. 1, 1973, the deadline was put off three times, until well into 1975. By the same token, the initial stopping distance requirement (from 60 miles per hour), first set at 217 feet, wound up after repeated extensions at 293 feet, still far shorter than the distance in which large trucks hitherto were able to stop. Oh well, back to the old drawing board.

Lack of official expertise, underscored by the Circuit Court, strikes an observer as bad enough. The stubborn refusal by NHTSA to weigh the damning evidence that came pouring in from truck and bus producer and user alike looks even worse. As our Mrs. Scheibla amply documented, manufacturers repeatedly told the government that the technological demands imposed by the complicated new braking system, especially the computerized anti-lock, far and away exceeded the state-of-the-art. From Maine to California, bus operators and truckers reported an alarming increase in accidents and personal injuries; as of a recent count, the loss of life in collisions involving vehicles equipped with the questionable devices—which, in one tragic case in Salt Lake City, have been blamed directly for the deaths of five teenagers—had reached 16. Yet until the judicial roadblock loomed in its path, the federal juggernaut—notably Joan Claybrook, NHTSA director and (as *The Wall Street Journal* neatly put it) Nader "henchperson"—was blindly, and mindlessly, on the move. There's one vehicle that's truly unsafe at any speed.

Even when it rolls (or crawls) along as unsurely, and with as many starts and stops, as NHTSA. As a matter of fact, Standard 121 had its origins in a predecessor bureau as far back as October 1967, shortly after passage of the Nader-inspired National Traffic and Motor Vehicle Safety Act of 1966 (which, by the way, in the suit brought by PACCAR et al., has suffered its first legal challenge). The proposed Standard required vehicles to stop within certain distances, from certain speeds, without a wheel locking up "more than momentarily." Since the stipulated stopping distances fell far short of any hitherto seen in the trade, the rule, in effect, mandated a whole new braking system, complete with anti-lock devices; the latter, in turn, comprised a mini-computer attached to the axle of the trailer or truck which "senses" when a wheel begins to lock and momentarily releases the brake to gain traction. A novel and complex piece of equipment, designed for a demanding task.

Yet NHTSA proceeded in what can only be called a casual, if not criminally negligent, way. Specifically, it failed to hold a public hearing on the issue until nine months *after* Standard 121 took effect. According to the court, it conceded that it had done no compliance testing for more than a year. "Agency attorneys also admitted that prior to the effective date of the Standard, NHTSA had done no reliability testing of vehicles with Standard 121 components whatsoever, other than the testing reviewed in the Murphy Report, which did not include stops at higher speeds." For "proof" of the system's reliability, it rested by and large on the absence of reports of highway accidents "caused" by the antilock, and the results of testing only three tractor-trailers. Since failures arose only through use, such methods were inadequate, held the court, which tartly added in a footnote: "The agency's evidence does not even show whether the abovementioned anti-lock defects occur only in certain models of a device, or only when placed on a vehicle of a certain type or weight." All in all: "The agency's failure to conduct a more intensive testing of trucks and tractor-trailers . . . was not only unreasonable, but also a legal abuse of its discretion."

There is a further count to the indictment: apart from failing to run its own tests, NHTSA stubbornly ignored the adverse findings of others, notably automotive manufacturers and truck and bus operators. Thus, a spot check by General Motors revealed that nearly six out of 10 anti-lock devices were inoperative; another by Consolidated Freightways showed that 65% malfunctioned. Complaints surfaced about relay valve failures, false warning signals or none at all, radio frequency interference. Greyhound went so far as to unhook the anti-lock devices on its newly delivered buses. The casualty list, including the fatal Salt Lake City accident cited above, has climbed. Still Joan Claybrook et al, (at least until last week) have continued to stonewall. The Circuit Court may have given pause to the powers-that-be—no official decision yet has been reached on whether to appeal—but the federal judggernaut remains gassed and ready to go.

* * *

Yet, so a mounting weight of evidence suggests, it has hit a dead end. Like the legislation that created it, NHTSA embodies a palpable fallacy, namely, that safety on the road generally depends on the car (or truck), not the driver. Specious a decade or more ago ("Safe or Sorry?," *Barron's*, Sept. 5, 1966), that Naderite myth went up in smoke a few years ago, when the OPEC-inspired fuel shortage led Congress to impose a speed limit of 55 miles per hour, down from the previously legal 70. All alone, that curb caused the number of traffic fatalities to plunge from 55,511 in 1973 to 45,853 in 1975 (as motorists increasingly have opted to ignore the speed limit, the toll again has begun to mount). In the realm of automotive safety, as the PACCAR case makes plain, the U.S. has been going the wrong way. High time to slam on the brakes.●

JOHN W. EBLING

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. YATRON. Mr. Speaker, we in this Chamber know very well the monumental contributions to American education made by people like Horace Mann, John Dewey, and Robert Hutchins. I would like to call to the attention of my colleagues another great American who has fashioned a tradition in education in Hamburg, Pa., which will endure for years to come.

I am speaking of Mr. John W. Ebling, superintendent of the Hamburg area school district, whose retirement this year brings to a close a sterling career which has spanned 40 years. From his first teaching assignment in the Center Township School in the 1938–39 school term, through his administration as superintendent, John Ebling has been a model educator. John has been at once forthright, firm, and understanding in his dealings with students, parents, and colleagues alike. He has given every student who has passed under his tutelage a very precious gift—the gift of knowledge. During the last 7 years, in his capacity as superintendent, John has provided the Hamburg area school district a quality of leadership marked by courage and compassion.

John Ebling's 40 years of service to public education in the Commonwealth of Pennsylvania constitute an outstanding achievement of which he and all of us who know him can be proud. But John's selfless dedication to our fellowman did not stop with his career in education. As a lay minister, a member of several civic and fraternal organizations and as disaster chairman in northern Berks County for the American Red Cross over the last 25 years, he has played a pivotal role in community affairs. While Hamburg area school district may be losing one of the finest educators in its history, some comfort may be taken in the knowledge that John's sense of civic duty will continue to carry him forward in his extensive community activities.

All of these fine attributes are a matter of common knowledge to the people of Hamburg and northern Berks County. I would like to add a more personal note. During the many years of our close friendship, I have seen in John the many private qualities which make him a person of such towering public stature. His

patience, his intelligence, and his concern for the well-being of others are characteristics which have earned John Ebling the deep and abiding respect and admiration of his many friends. I know he will continue to contribute to our lives, a wealth which has no monetary value.●

SOVIET TACTICS IN WORLD CLASS CHESS: AN OMINOUS SIGN FOR INTERNATIONAL COMPETITION

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1978

● Mr. KEMP. Mr. Speaker, in the world of international chess, an incident of the past year merits the attention of this Congress and the American people.

I refer to the defection to the West of Viktor Korchnoi, a leading Soviet grandmaster, and what has transpired as a result of that defection.

Needless to say, that defection—which occurred in the Netherlands about a year ago—enraged the Soviets. It was not solely that he had defected that enraged them. That was bad enough, but it was also that he had already qualified for the candidates matches, a series of elimination matches among the top eight players of the world, the winner of which would become the challenger to the reigning world champion, the Soviet's Karpov. Thus, Korchnoi could become the new world chess champion, defeating Karpov, a Soviet defector defeating a Soviet party-liner.

The Soviet's anquish increased this year as Korchnoi defeated all the opposition—in the quarterfinals, the semi-finals, and then the finals. They are beside themselves now, since Korchnoi is the challenger for the world title, with the Korchnoi-Karpov match slated for late spring or early summer.

The way in which the Soviets went about trying to discredit and then to defeat Korchnoi was brought out in a recent column by the nationally syndicated columnist, Professor Jeffrey Hart of Dartmouth College. Professor Hart, who has long spoken out against the politicization of international competition, makes the point that I have made to the International Olympics Committee and the U.S. Olympic Committee with respect to the Olympic Games in Moscow in 1980. That point is that the Soviets are not stupid, that they do have some finesse, that they will therefore rewrite the rules to serve their own purposes at every opportunity and then apply those rewritten rules to the cases they know they want to deal with. This gives them a public relations advantage, among those who do not know the whole story, of being able to say, each time they carry out what is truly a political act, that it really is not political, that it is just that such-and-such a country, or athlete, or reporter simply was not in conformity with the rules.

Professor Hart's point is well made. It is not speculation. We have had 61 years of Soviet conduct to observe. I know of no reason to assume that it is going to be any different in this regard in the 62d year or the 64th in 1980. The Soviets will continue to use international competition to their own political advantage, and they will use every technique we let them get away with to "rig" those competitions.

Professor Hart's column and excerpts from the U.S. Chess Federation 1978 Yearbook and an item from Chess Life & Review of October 1977 follow:

SOVIET CHESS: OMINOUS SYMBOL

by Jeffrey Hart

Not that many Americans play chess, or follow big time chess closely. Nevertheless, Soviet behavior toward Viktor Korchnoi, a chess grandmaster who defected on July 27, 1976 has implications that go far beyond the chess world.

That is, what the Soviets have been doing illuminates their attitude toward sports in general, and their likely attitude toward the 1980 Moscow Olympics in particular.

Chess experts rank Viktor Korchnoi number three in the world, behind Bobby Fischer and the Soviet champion Karpov.

While playing at an international chess tournament in Holland in 1976, Korchnoi asked for and received political asylum. One thing that enraged the Soviet government was that at the time Korchnoi had at the time qualified for the Candidates Matches—a series of elimination matches among the top eight players in the world. The winner of this becomes eligible to play Karpov. Korchnoi proceeded to mow down his opposition, advancing through the quarterfinals, the semi-finals, and the finals. Korchnoi is now the Challenger, and will play Karpov for the world title this spring or early summer.

At the present time, the Soviet authorities are doing everything within their power to make Korchnoi a non-person in the chess world and to make his life as miserable as possible.

If a Soviet chess player loses to Korchnoi in international competition, Soviet chess authorities treat the loser like a political criminal.

The Soviet Chess Federation has moved to erase Korchnoi's name from Soviet chess history. New chess books, as well as revised versions of old ones, cannot include examples of Korchnoi's play. Chess periodicals may not publish descriptions of any games Korchnoi has played since his 1976 defection.

The editor of one of the leading Soviet chess journals, entitled "64", was a grandmaster named Petrosian. His own quarter final match with Korchnoi was not covered by "64." All that appeared were laconic statements, such as that "After Game 8, the score was Korchnoi 4½—Petrosian 3½." After losing his match to Korchnoi, Petrosian also lost his job as editor of "64."

The Soviets are doing everything they can to cripple Korchnoi for his coming world championship match against Karpov.

In chess, as in any game. you stay sharp by confronting top competition. The Soviet chess federation has moved to block Viktor Korchnoi from competing in international chess tournaments, and they have been very successful.

The Soviets have informed the organizers of such tournaments that they will look with displeasure on any invitation to Korchnoi. Tournament organizers know that if Korchnoi is present there will no players from Russia, Bulgaria, Czechoslovakia, Hungary, etc. The organizers have caved in, and the only international tournament Korchnoi has participated in since his defection was a relatively weak one in Montreux, Switzerland.

Korchnoi is tough. Bet on him against Karpov. And bet on the Soviets to pull the same kind of things in Moscow in 1980.

[Excerpt from U.S. Chess Federation 1978 Yearbook]

The darkest cloud to color the chess sky during 1977 was the continuation of the Soviet bloc's effort to use chess as a political tool. Under the strong pressure from the U.S.S.R., FIDE President Max Euwe convened an extraordinary general meeting of FIDE in Lucerne, Switzerland, during July to discuss the membership of South Africa. I have already indicated my repugnance at this affair, which resulted in the expulsion of South Africa, and at the way that Dr. Euwe handled it (see *Chess Life & Review*, October 1977), so I shall confine my comments here to a reiteration of the statement made on behalf of his Western colleagues by Dr. Jungwirth, President of the Austrian Chess Federation, at the end of the Lucerne meeting: "If FIDE continues to be misused for political purposes by the U.S.S.R. then the question of human rights in the Soviet Union itself will have to be raised at the next congress."

Political pressure has also been used by the communist bloc to prevent Korchnoi from participating in strong international tournaments. Organizers know full well that if Korchnoi is invited to their tournaments there will be no players from the U.S.S.R., Hungary, Czechoslovakia, Bulgaria, etc., and thus far no organizer of a really strong event has been brave enough to invite Korchoi. The only tournament in which he has played since his defection in July 1976 was a weak event in Montreux, Switzerland. Not even in Holland, where Korchnoi was living for the first year following his defection, has anyone had the courage to organize a strong tournament and to invite only Western and Yugoslav grandmasters. This is a sad reward for someone who has sacrificed so much for a new life in the West.

[Excerpts From Chess Life & Review, October 1977]

KORCHNOI-POLUGAEVSKY: ANOTHER GRUDGE MATCH?

(By Edmar Mednis)

As I discussed in connection with the Korchnoi-Petrosian quarterfinal match, Korchnoi's heart was full of bitterness toward both his opponent and the Soviet Chess Federation. The result on his play was an even greater than normal determination and a high degree of nervousness. Only in the twelfth (last) game of that match did Korchnoi's mind appear to be completely free of extraneous matters. With what feelings does Viktor Korchnoi approach his semi-final candidates match against Lev Polugaevsky?

I believe that Korchnoi feels no particular personal animosity toward Polugaevsky. By all accounts their relationship has always been cordial. However, Korchnoi's animosity toward the Soviet Chess Federation has undoubtedly increased, and for several valid reasons. As a result of decisions made by the powers that be, the Federation has decided not only to make Korchnoi's life as miserable as possible but also to erase it from Soviet chess history. According to reliable reports, new chess books as well as revised ones may not contain examples of Korchnoi's play. Nor may current journals publish any games that Korchnoi has played since his defection on July 27, 1976. One particularly ludicrous example: An outstanding weekly chess newspaper is "64," whose founder and—until now—chief editor was Petrosian. Three of the 1977 quarterfinal matches were covered in depth by it. But not the match involving its Editor-in-Chief: no games, no reports, no analysis. If it weren't for one-liners such as "After Game 8, the score is Korchnoi 4½-Petrosian 3½" one would have thought that Petrosian had gone fishing instead of playing for the world championship. And speaking of Petrosian, something funny happened on his

way to the Kremlin, soon after losing the match to Korchnoi: he lost his job as editor of "64." It was done in the usual "informative" way: no explanation, no discussion—just suddenly one week his name disappeared from the masthead. One wonders what effect such occurrences must have on Polugaevsky's nervous system.

Of course, the above actions could be considered indirect. There were also direct ones. For example, the federation informed organizers that it would look with strong displeasure at any invitation to Korchnoi to play in international tournaments. As a result, Korchnoi has had no chance to take part in tournament play at all. Or consider the behavior of the Soviet delegation at the semifinals match site. According to reports from the organizers, the Soviets have been as nasty as possible, objecting and complaining about any and everything, from specific pieces of furniture to the lighting and general practical matters. The Soviets vetoed Korchnoi's playing under the Dutch flag and under any flag at all. They informed the organizers that any direct contact with Korchnoi that can be avoided will be avoided, inculding the traditional handshake before each game and the joint press conference before the start of the match. An impartial observer may wonder why they are doing all this; it may well serve only to bring out increased determination in Korchnoi and increased nervousness in Polugaevsky. If Korchnoi loses, he loses only a match (unpleasant though that may be), but a loss by Polugaevsky may well be looked upon by the ruling hierarchy as an act of original sin.

In review of Korchnoi's win over Petrosian I stated that at present only Fischer and Karpov have a fair claim of being better than Korchnoi, and nothing that has happened since has changed this view. Still, it is in order to say something on Polugaevsky's behalf. The Moscow grandmaster has been long regarded by grandmasters and chess journalists as being unable to win key games. I think this is a bum rap. It is true that Lev has not been successful in all contests, but, pray tell, who has? And his list of positive accomplishments is long: twice U.S.S.R. Champion, first-prize winner in over twenty international tournaments, a key last-round win over Portisch at the Petropolis Interzonal 1973 that set the stage for his qualification for the candidates at the subsequent playoff, a direct qualification at the 1976 Manila Interzonal, a defeat of Mecking in the 1977 quarterfinal match by 6½-5½. What is wrong with a record like that? As a matter of fact, the mid-1977 rating list of the U.S.S.R. Chess Federation ranks Polugaevsky second at 2648, behind only Karpov's 2725. Even so, taking into account all these good things about Polugaevsky, there is no question in my mind that Korchnoi is the favorite.

(Note to Reader: Korchnoi defeated Petrosian in their quarter-final match.)●

TURKISH MASSACRE OF THE ARMENIANS IN 1915

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. DERWINSKI. Mr. Speaker, recently, we observed the 63d anniversary of the massacres suffered by the Armenian people at the hands of the Ottoman Turks in 1915. History now recognizes that the failure of the world to rally to the side of the Armenian people set a pattern of indifference that produced the slaughter of innocent people by Hitler's Nazis in World War II.

The Armenian Reporter, a publication serving the Armenian-American community across the country, carried a very pertinent article in their April 27 edition, of the history of tragedies that have beset that nation. This very objective analysis follows:

PANEL AT ARMENIAN CENTER EXPLORES REASONS FOR THE TURKISH MASSACRES OF THE ARMENIANS IN WORLD WAR I

WOODSIDE, N.Y.—A host of speakers, well—versed in various aspects of the Armenian Holocaust last Saturday evening joined to discuss the Turkish Massacres of the Armenians at the Armenian Center of Queens here.

Set on the eve of the 63rd anniversary of the massacres, the talk emerged as an in-depth study viewed from four different angles. It also shed new light on the issue, as it is seldom that Armenians in this area are exposed to such a scientific review of the events of World War I that uprooted almost all of the Armenian population of Turkey and struck such a heavy blow that it took decades for the Armenians to recover.

The discussion was sponsored by the New York chapter of the Armenian National Committee, the political arm of the Armenian Revolutionary Federation. Mr. Hagop Barsoumian, currently a graduate student working on his doctoral in history at Columbia University, coordinated the program and introduced the speakers.

Very Rev. Krikor Guerguerian, spiritual leader of the American Catholic community of greater New York, and a noted researcher in the field of documentation related to the massacres, was the first speaker. Father Guerguerian discussed the topic in the light of documentation, and emphasized that, regretfully, Armenians have been able to put together only a handful of documents that prove the Armenian assertion of the Turkish massacres. Unless there is documentation, he averred, it will be almost impossible to prove to the scholarly world that there indeed was an organized effort on the part of the leaders of Ottoman Turkey to annihilate the totality of the Armenians who lived in Turkey. He cited the case of a "boxful" of Ottoman Turkish documents covering the period, which presently lie in a state of disarray somewhere in the Middle East.

Mr. Stepan Dardouni, a leader of the ARF in this area, explored why Armenians who lived with the Turks in Turkey for a few hundred of years, neither anticipated nor prepared themselves for the deportations that struck the very core of the Armenian people. "Why," he asked "did the leadership in Turkey fail to foresee the mounting storm and take measures to protect their ranks?" He suggested that perhaps the urge for martyrdom was so great within the people that Armenians failed to note the danger that threatened physical existence.

Mr. Dardouni concluded his discussion of the issue by calling on the people to consider the anniversary of the massacres a day of silent meditation and mourning, and a time to learn from past mistakes.

Mr. Nikol Schahgaldjian, another doctoral candidate presently completing his studies at Columbia University, discussed the massacres in the light of the reaction from international diplomacy. After explaining that present-day international diplomacy differs only in that a handful of major powers dominate the international scene, Mr. Schahgaldjian asserted that the major powers of the time, even if sympathetic to the Armenian cause, were fully aware of what was happening to the Armenian people at the hands of the Turks. Yet they chose to remain neutral, or failed to take necessary measures either to prevent its continuation or to put an end to it.

Mr. Schahgaldjian affirmed that Germans were basically favoring the scheme of the rulers of the Ottoman Empire—their allies—to annihilate the Armenian people, as their own interests opposed the presence of such a large number of Armenians in the territory of Turkey. Germans, Mr. Schahgaldjian maintained, were distrustful of Armenians, whom they viewed as either friendly to the West or under the influence of Czarist Russia.

On the other hand, England, France and Italy chose to do little outside of symbolic expression of sympathy, simply because they regarded Armenians as a stepping point for the expansionist designs of Russia, and felt that Turkish massacres would prevent the Russian expansion into the Middle East, an area where these countries themselves had widespread interests. They did not wish to see Russia gain a foothold.

Discussing the position of the United States regarding the Armenians at the height of their sufferings, Mr. Schahgaldian pointed out that this country was quite indifferent. Despite the action against the Armenians, he stated, the U.S. continued to maintain friendly relations with Ottoman Turkey almost reaching the end of their holocaust.

Mr. Armen Baghdoyan, the holder of a doctoral degree and presently on the editorial staff of Hairenik Daily in Boston, Mass., discussed the psychology of the Armenian people since the tragic events of World War I. He described the "isolationary period," as that which covered the period soon after the completion of the massacres and the deportations. "In this period, "Dr. Baghdoyan maintained, "Armenians as a people attempted to save whatever could still be saved from the massacres, and as a people we functioned in a manner which was characterized with the complete absence of a clear cut orientation." He explained that this period lasted 50 years and another period emerged as Armenians marked the 50th anniversary. He called this a period of assertion and affirmation in which people sought to expose the case to the outside world and influence world public opinion. Dr. Baghdoyan pointed out that in this period, Armenians tried hard to come out of their shells and cry out to the whole world in protest against the injustice committed.

Elaborating on this stage, Dr. Baghdoyan asserted that although this period has yet to reach its culmination, we are now witnessing the emergence of still another period which will witness the evolution of the Armenian into a more mature group capable of submitting itself to a stricter discipline, pursuing new goals and setting new aspirations. He called this period a time when Armenians, as a people, will revolutionalize their overall outlook toward past issues, past assessments and performances, and fall in line with modern thinking and methods for the successful culmination of their cause.

The discussions ended with a question and answer period which revealed the deep interest that the evening had aroused in all those who attended the thought-provoking session.●

APPOINTMENT OF THE CHAIRMAN AND VICE CHAIRMAN OF THE FEDERAL RESERVE BOARD

HON. PARREN J. MITCHELL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. MITCHELL of Maryland. Mr. Speaker, I am introducing a bill today which provides for the appointment of the Chairman and Vice Chairman of the Federal Reserve Board at regular 4-year

intervals. Under the provisions of this bill, the Chairman's and Vice Chairman's terms would expire on January 31 of the first calendar year after the year in which the term of the President appointing him is scheduled to expire. It also makes provisions for the Chairman or Vice Chairman to serve in their positions during interim periods, pending appointment of a qualified successor.

IMPORTANCE OF THE FEDERAL RESERVE AND THE CHAIRMAN OF THE BOARD OF GOVERNORS

The Federal Reserve manages our Nation's money and credit. Its decisions are crucial to our economy's overall performance. Nearly all economists now agree that though money is not all that matters, it matters very much in determining our economy's employment, production, price, and interest rate trends. Inflation is exacerbated and interest rates pushed up when the Fed allows the money supply to grow faster than our economy's potential to increase production. Production recedes and unemployment rises when the Fed slows money growth suddenly and sharply.

The Board of Governors of the Federal Reserve supervises the system's activities. The Board reviews the determination of discount rates, sets reserve requirements for member banks, and oversees operations of the Nation's payments mechanism. Most importantly, the seven members of the Board of Governors serve as permanent members of the Fed's 12-man Open Market Committee; and the Chairman of the Federal Reserve Board is also chairman of the Federal Open Market Committee. The FOMC sets year-to-year targets for monetary growth and guides the day-to-day actions that control the growth of the monetary aggregates.

Thus, in every respect, the Chairman of the Federal Reserve Board is in charge of the Nation's monetary policy. Many consider his job the second most important position in Washington, second only to that of the President. His decisions and actions strategically affect our employment opportunities and the prices we pay for the goods and services we buy. Few, if any, would deny the importance of the Federal Reserve or the Chairman of its Board of Governors. Few also would deny the importance of providing for both continuity of monetary policy and congruity with the fiscal and other economic policies of the President and the Congress. The former requires shielding monetary policy from sudden ephemeral political influences. The latter requires allowing new Presidents to appoint those in charge of monetary policy after they have had time to decide and put into effect their fiscal and other economic policies. My bill aims at achieving precisely this dual purpose.

HOW MY BILL AMENDS CURRENT PROCEDURE

My bill will not change the terms of office of the seven Governors of the Federal Reserve Board. They will continue to be appointed by the President to 14-year terms, staggered so that one Governor is appointed on January 31 of every even-numbered year. Also under my bill, of the persons thus appointed, the President will continue to designate one to serve as Chairman and another to serve as Vice Chairman, both for 4-year terms.

The way in which my bill does change current procedure is in providing that the terms of the Chairman and Vice Chairman shall always terminate on a specific date, January 31 of the first calendar year after the year during which the term of the President who appointed him is scheduled to expire. Concomitantly, should a vacancy in the Chairman's or Vice Chairman's terms occur for reasons other than expiration of their term, the person appointed to fill the vacancy would still serve only until January 31 of the first year following the year in which the term of the President who appointed him is scheduled to expire; that is, the same date on which his predecessor's term would have expired.

In contrast, under existing law both the Chairman and Vice Chairman are appointed to serve 4-year terms beginning when they are appointed, regardless of whether their predecessor has served a full 4-year term. The phasing of their terms in relationship to that of the President thus is now partly a matter of chance.

In consequence, in the past, Chairmen and Vice Chairmen have been appointed to serve 4-year terms at various times in the Presidential cycle. President Roosevelt appointed Eugene R. Black to serve as Chairman in May 1933, only 2 months after his first inaugural in March 1933. Marriner S. Eccles and Thomas B. McCabe were appointed in Presidential election years; Eccles in 1936, 1940, and 1944, and McCabe in 1948. McCabe resigned in March 1951, and William McC. Martin was appointed to his first 4-year term in 1951 and reappointed in 1955, 1959, 1963, and 1967; that is, always 2 years after inauguration of the President. Martin's term as Governor expired on January 31, 1970. His place both as Governor and Chairman was taken by Arthur Burns, whose first term as Chairman began on February 1, 1970. Dr. Burns was redesignated Chairman in 1974, with his term phased to begin 1 year after inauguration of the President. G. William Miller was appointed on March 8, 1978, and is eligible to be redesignated on March 8, 1982, 1 year and 6 weeks after the inauguration of the President.

My bill will make permanent the current phasing of the Chairman's term to begin 1 year after the President's inauguration, although it will use the January 31 date rather than the March 8 date. It will also apply the same phasing to the term of Vice Chairman.

Under current law, if Mr. Miller were to resign in 1980, or if he were reappointed in 1982 and subsequently resigned in 1984, a new Chairman could be appointed for a full 4-year term the next day or whenever the President chooses to fill the position. In considering this possibility, it is well to keep in mind that 1980 and 1984 are Presidential election years. There is a chance then, under present law, that appointment of the Fed Chairman could become an election issue. To assure that administration of the Fed is kept out of politics, we must eliminate this chance that a new Chairman will be appointed for a full 4-year term in 1980 or 1984, Presidential election years, and be up for reappointment in subsequent Presidential election years.

My bill eliminates the element of chance that now exists in determining when the terms of Federal Reserve Board Chairmen and Vice Chairmen begin. Under my bill, full terms will always end on January 31 after the year in which the term of the President who appointed them is scheduled to expire. Thus, full terms will always begin 1 year after the President is inaugurated. They cannot begin, as now, in election years, nor could they begin a few days after the President is inaugurated, as they now also can. This bill both eliminates the appointment of the Fed Chairman as an election issue, and insures that each President will have a Chairman of the Federal Reserve with whom he can work during 3 full years of his term in office.

Further, under current law, if Mr. Miller were reappointed March 8, 1982, and a new Chairman was appointed March 8, 1986, he would have to serve under Mr. Miller for 5 weeks. This is because the terms of Governors of the Fed expire on January 31 of even-numbered years; thus, the new Chairman would be appointed to the Board on January 31, but not allowed to assume the chairmanship until March 8. This would be uncomfortable, to say the least. Conceivably, one day a new Chairman will not be confirmed for 5 months or even longer. Then the next new Chairman would have to serve under the outgoing Chairman for several months. And this pattern would be continued indefinitely, until a Chairman resigned prior to the expiration of his term.

SECTION-BY-SECTION ANALYSES

The proposed bill on the terms of the Chairman and Vice Chairman of the Federal Reserve Board is entitled the "Federal Reserve Act Amendments of 1978."

Section 2 of this bill would require Presidents to designate the Chairman and Vice Chairman of the Board in a straightforward manner which eliminates chance playing a role, as it now does, in the phasing of their terms in relation to that of the President. Specifically, this section provides for the appointment, subject to Senate confirmation, of a Chairman and Vice Chairman of the Federal Reserve Board, each for a term expiring on January 31 of the first calendar year commencing after the calendar year during which the President appointing him is scheduled to expire. Essentially, this means that full terms of Chairman and Vice Chairman would always officially begin on January 31 of the year following the inauguration of a President. It also means that those persons appointed to a vacancy during an unexpired term would not serve for 4 full years, but still only until January 31 of the postinaugural year.

Section 3 provides the Vice Chairman with the authority to act as Chairman in the temporary absence or disability of the Chairman or in the event of the death, resignation, or permanent incapacity of the Chairman, pending ap-

pointment and qualification of his successor. It also provides that the Chairman or Vice Chairman, upon expiration of their terms as Chairman or Vice Chairman, shall continue to serve in that capacity until a successor is appointed and confirmed by the Senate. The Federal Reserve Act makes no provision for the former case; for the latter, it only provides that Board members may continue to serve on the Board, upon the expiration of their terms, until a successor is appointed and has qualified. It does not specifically mention their continuing to hold an office on the Board.

Section 4 repeals section 204 of the Federal Reserve Reform Act of 1977, which provided that the appointments of Chairman and Vice Chairman be made with the advice and consent of the Senate. Since section 2 of my bill states that the Chairman and Vice Chairman will be appointed by the President by and with the advice and consent of the Senate, section 204 is redundant. Further, my bill would be enacted as soon as passed, but section 204 does not take effect until January 1, 1979. Therefore, if section 204 is not repealed, it would override section 2 of my bill on January 1, 1979.

Section 5 insures that this bill will not effect the current Chairman, Mr. Miller, in any way. Were this section not enacted, Mr. Miller's term as Chairman would expire on January 31, 1982, rather than March 8, 1982, and his term would be 5 weeks shorter than the 4 years to which he was appointed. However, this section provides that if Mr. Miller were to resign prior to the expiration of his term, the provisions of this bill would apply to his successor, who would serve until January 31, 1982.

REASONS FOR THIS BILL'S ENACTMENT

First, under the provisions of the 1913 Federal Reserve Act, as amended, one vacancy among the Board of Governors occurs on January 31 in every even-numbered year. Under my bill, the 1982 vacancy, and vacancies every fourth year thereafter, will permit the President to designate a new Chairman to a full term who is the most qualified individual in the country. He will not be limited to persons already serving as members of the Board. The new person can be appointed Governor January 31 and designated Chairman the next day. In contrast, under the law as it stands, the Chairman might have to be chosen from among already sitting Governors. He would if the Chairman's term began and expired in odd-numbered years, as did William McC. Martin's terms as Chairman. There is no automatic vacancy on the Board of Governors in odd-numbered years. Thus, if the Chairman must be chosen in an odd-numbered year, the President, barring a fortuitous resignation, must choose from among a predetermined pool of just seven persons. Clearly, this constraint is unnecessary, unwarranted, and unduly confining.

Second, under my bill, incoming Presidents will designate a Chairman and Vice Chairman 1 year after assuming office. This provides for the closest possible phasing of the terms of the Federal Reserve Chairman and Vice Chairman in relation to the President's term without amending provisions of the act with respect to the expiration of the Governors' terms of office. At the same time, this measure allows the President the widest possible choice in selecting the Chairman or Vice Chairman.

Third, the 1-year delay in designating the Chairman and Vice Chairman provides for reasonable continuity in monetary policy in periods when the Presidency changes party without, however, unduly restricting the President in conducting economic policy. By the time a new administration has formulated and put into place its fiscal and other economic policies, the President will be able to designate his choice as Chairman of the Federal Reserve Board, thereby assuring congruity—though not subordination—of monetary policy with his economic programs.

Fourth, after 1982, my bill rules out a new Chairman designate having to serve under the person he is replacing while waiting for that person's term to expire. Under current law, a Chairman's term need not expire the day after a new Governor is appointed. Chairman Miller's first term is scheduled to expire on March 8, 1982, 5 weeks after a new Governor is appointed on January 31, 1982; and a little reflection suggests that the scheduled lag could easily be 5 months or 15 months. Thus, current law could easily give rise to a very uncomfortable situation, which my bill would avoid.

Fifth, current law states that whenever a vacancy occurs among the seven members of the Board a successor shall be chosen to fill the unexpired portion of his predecessor's term. This provision, though, does not specify the unexpired terms of the Chairman and Vice Chairman. The provisions of my bill provide that should the chairmanship or vice chairmanship be vacated before expiration of the term, only the unexpired portions of the term would be filled by appointed successors. This eliminates chance in determining the phasing of the terms of our top monetary policy officials, with that of the President, and clearly chance should play no role in the determination of this relationship.●

ONLY HITS COUNT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. McDONALD. Mr. Speaker, while the debate rages on about our strategic weaponry and the sophisticated hardware that is planned for our soldiers, we should not forget the rifle, which is basic to all soldiers. On an individual basis, there are still good professional marksmen in the Army, but, the overall average performance is poor whether we are talking about tank gunners or riflemen firing M–16s. And in the days of a tight budget, the tendency always is to cut down on "live" firing. The experience of Vietnam only worsened the situation where "spraying" the jungle when visibility was limited was not conducive to accurate aiming of weapons. Good marksmenship is more vital to our fighting men than ever before as we are badly outnumbered in any possible conventional war situation wherein we would face the Red army with its hordes of soldiers. Therefore, I commend the article which follows by Lieutenant Colonel Wigger that appeared in American Rifleman for April 1978. The item follows:

ONLY HITS COUNT

(By Lt. Col. Lones W. Wigger, Jr., USA)

Teddy Roosevelt once said: "In battle, the only bullets that count are those that hit. A soldier who cannot shoot is a soldier who counts for little in battle."

We have lost sight of Rooosevelt's famous words. America is no longer a nation of marksmen. The proud heritage we once possessed, the heritage that helped us win our independence no longer exit. The marksmanship ability of the average soldier has deteriorated so badly that we would be hardpressed to win a conventional war today. We are fooling ourselves if we believe the American soldier can shoot.

My own combat experiences and those of many other qualified, marksmanship-oriented combat experts who served in Vietnam provide convincing evidence that our troops can't shoot.

I had daily first-hand knowledge of the marksmanship ability of replacement combat troops and faced the apparent lack of concern about basic fundamentals by senior officers in the 23rd Infantry Division in Vietnam in 1971. I was the Officer in Charge of the Division's Sniper School, and also in charge of marksmanship training for the replacement troops to the Division during their in-country indoctrination period.

I found the average replacement could not hit a silhouette target at 25m, knew little of basic marksmanship fundamentals, and did not understand why he needed to zero his rifle. I tried, unsuccessfully, to change the division policy of issuing rifles to replacements after in-country training and battalion assignments, so that they could go to the field with a zeroed rifle.

Maj. John R. Foster was the Officer in Charge of the 101st Airborne Division's Sniper School in 1971. He was also responsible for the in-country training for the replacements, as well as a special marksmanship school conducted weekly for combat troops. The replacement troops did not zero their rifles before being sent to the field because they did not receive battalion assignments and personal weapons until the in-country training was completed.

The 101st had a weekly program in which two members from each combat company were sent in from the field for marksmanship refresher training. To demonstrate the importance of fundamentals to this group of approximately 30 seasoned combat troops, Maj. Foster conducted a demonstration during the first period of instruction. He asked the group to select from within their ranks the individual whom they considered their worst marksman, usually a "Gomer Pyle." An instructor would remove this apparently inept soldier from the group and force-feed him basic marksmanship fundamentals while the rest of the group was being briefed.

After the briefing, each man in the group was moved to the firing line with his personal M16 and two fully-loaded 30-round magazines. They were then instructed to fire as many rounds as possible, in any position, at any rate of fire in a maximum of one minute at a single man-size silhouette target placed 50 m down-range. "Gomer Pyle" was allowed to zero his M16 and issued two loaded 30-round magazines. He was then instructed to

shoot as many rounds as possible at a separate, but identical silhouette, given the same time limit. However, "Gomer Pyle," unlike the rest of the group, was required to use the prone position, had to place the selector switch on semi-automatic, and he had received a five-minute class on fundamentals.

Without exception, the result was always the same. The soldier who had received the extra training always had more hits with his controlled 60 shots than the rest of the group did in their total, combined effort. The soldiers in the group usually shot standing, and rarely fired their rifles except on full automatic. Many did not even bother to use the rear sight. The group averaged four to six total hits out of approximately 1800 rounds of ammunition.

The 25th Infantry Division was located at Cu Chi in 1969. M/Sgt. Emil W. Heugatter was in charge of the Division's Combat Marksmanship School, which was the cover name used for the Sniper School.

G–3 detailed the Combat Marksmanship School to test the marksmanship proficiency and weapons maintenance of a selected platoon of a line battalion in each brigade.

M/Sgt. Heugatter and SFC Cleone L. Anthony conducted the test by placing 12" square zero targets on takes at 25 m and required each man in the platoon to shoot slow-fire prone. Approximately 10% were able to hit the square target. The others could not hit the target either because their rifles were not zeroed or they lacked knowledge of the fundamentals. Most did not know how to zero their rifles and showed no understanding of why they should. The 25th Division had no requirement for their soldiers to zero their rifles before they were sent to the field.

Heugatter and Anthony also found that many of the rifles needed maintenance. Some had front sights rusted beyond adjustment, one rifle had no front sight at all, and many had completely worn-out barrels.

American combat troops in Vietnam were often poorly trained, lacked knowledge of basic fundamentals and did not maintain their weapons properly. No one, including senior NCOs and officers, seemed to understand the importance of having a zeroed rifle.

Current Department of the Army policy states:

"There is no need to live with antiquated, ineffectual marksmanship when the life of the soldier depends on his ability to use his rifle effectively. The soldiers' life can be lost in a second at a loss of thousands of dollars in training and support. We should continually strive for better ways of teaching him to shoot, and to develop his confidence in his ability to use his basic weapon."

Unfortunately many personnel do not support this policy. The importance and necessity of good marksmanship for combat soldiers has always been a controversial subject, even though history has proven that the soldier who could hit what he shot at played an important role in all our wars.

As a nation, we have become progressively poorer marksmen. During WWI, the American soldier expended 7,000 rounds for each enemy casualty.

In WWII, the figure was 25,000 rounds and in Korea, 50,000 rounds. How many rounds were expended in Vietnam? 200,000? 400,000?

According to Col. Ernest Dupuy in an article in The Army-Navy-Air Force Register in 1960, "it has been proven that during WWII and Korea, a sizable portion of our frontline soldiers never fired their rifles in action."

Maj. Gen. M. A. Edson, USMC (Ret.) reported in 1954, "only one out of five servicemen in Korea regularly fire their rifles (sic) in combat. This is due to a lack of confidence based on insufficient training."

Except for hard-core Regulars and Marines, especially between the two World Wars, foot soldiers of this century have never attained true proficiency with the rifle.

In 1956, a two-fold approach was taken to improve Army marksmanship, incorporating the lessons of Korea. The first phase was the introduction of the Trainfire system of marksmanship training. Developed by a group of Army experts, this system provided marksmanship training which closely simulated combat conditions. Soldiers were taught the most effective firing positions and the importance of firing from cover and concealment. The second phase included range estimation and target detection.

The objectives of the Trainfire rifle marksmanship course were: to develop confidence and the desire to engage a combat target, to develop the ability to detect combat-type targets, and to develop the ability to hit a detected target.

Since the adoption of Trainfire, aimed fire and aimed-fire training have been de-emphasized. Many have advocated a scatter-gun, hit-or-miss spraying of enemy-held ground, in the hopes that perhaps some of the enemy would be hit. This seems to be the "typical" approach to solving the problem of effective combat marksmanship. We have continued in this trend today. An example of this is "quick kill" which was adopted by the Army in the 1960s.

In 1966, the Army adopted the M16 rifle which was used extensively in Vietnam. It was light and proved worthy for close-in fighting, especially in the jungle. It had the capability of automatic fire, and because of its small caliber, more ammunition could be carried.

With the adoption of the M16, the service rifle's maximum effective range was shortened considerably from that of the M1 and M14. Aimed fire was seldom used and volume automatic fire became the rule in combat because of the M16's full-automatic capability. But the training concept was not changed. Trainfire, with minor modifications, was still being taught.

When Maj. Gen. George B. Pickett, Deputy Commander, Third U.S. Army, was asked in 1973 why the Army could not shoot, one of the reasons he gave was that: "No tactical doctrine was ever devised or adopted for the M16 rifle." The program for Trainfire was originally written for the M1 and slightly updated for the M14.

There are other reasons that have led to our demise as a nation of marksmen. "Known-distance" shooting has been phased out completely, except in competitive shooting. Known-distance shooting always stressed fundamentals. All good shooting, be it combat or competitive, requires the application of the same fundamentals. Such things as sling support and adjustable sights do not change fundamentals; they are merely sophisticated aids designed to ensure greater precision. Good habits are no longer learned. Aiming, sight alignment, breathing, trigger control, and follow-through are not retained. The forming and retaining of these basic good habits assure the probability of a hit, not just the possibility.

Known-distance shooting is also needed to establish accurate battle sight zeroes. Because of the use of the 25 m zero target, instructors and students have lost sight of the absolute necessity for a rifle to have the sights adjusted with the line of bore so the bullet will hit where the rifle is aimed.

Trainfire shooting does not allow the shooter to see where he is hitting. The soldier must know where his shots are going to gain confidence in his rifle and enthusiasm for shooting. Mistakes which are not recognized and are, therefore, habitually repeated are the major causes of poor performance and loss of enthusiasm for marksmanship training.

It is only natural that if a man is taught to excel in something, he will, mostly likely, continue to show enthusiasm for it the rest of his life. Thus, inspiring enthusiasm toward shooting becomes simple. In combat shooting, as in competitive shooting, the enthusiasm comes when the individual has confidence in himself and his firearms. Confidence is acquired through increasingly successful performance. Therefore, to ensure enthusiasm toward shooting, it is necessary to teach riflemen to shoot accurately.

In the Army pamphlet "Training Operations-Lessons Learned," most commanders observed that individual soldiers in Vietnam needed to be taught to shoot more accurately. They stated that some type of known-distance firing should be used and stressed during basic rifle marksmanship training.

The lack of qualified instructors at the Advanced Individual Training and Basic Combat Training level, as well as in regular troop units, is perhaps the biggest reason our troops are not proficient marksmen.

The principles are being written into lesson plans, and the students hear the words, but this is where the instruction stops. When a skill which involves muscular coordination and discipline is taught, the teaching of that skill requires more than an oral briefing. The teacher must be competent, experienced, and have first-hand knowledge of the subject. A non-swimmer cannot effectively teach swimming; neither can a poor shooter or inexperienced teacher teach shooting effectively.

Maj. Gen. Pickett also reiterated this point in a recent article. He said: "The responsibility for developing training has been passed from shooters, experienced soldier-marksmen, to behavioral and social scientists under government contract." In other words, shooters are no longer teaching shooting!

Qualified instructors should be developed from the ranks of competitive shooters. The de-emphasis on competitive shooting is taking its toll. It is estimated that there are no more than 300 experienced rifle shooters remaining on active duty today. In five years, at the current retirement rate, there will be few NCOs with competitive marksmanship expertise remaining. Because of the de-emphasis on competitive shooting, few new shooters are entering the system. When competitive shooting dies, our instructor expertise in marksmanship will die with it.

Results of the "Little Report" reinforce this statement. According to their findings:

"It is extremely important to have knowledgeable, competent marksmanship instructors and coaches teaching marksmanship in basic training. The more they know about marksmanship training and shooting, and the more they feel and communicate the importance of being able to shoot well, the more effective they are as teachers. The man who is both a combat veteran and a successful competitive shooter is most believable in communicating both the need to become a capable shooter and how to develop such capability."

When I was the Officer in Charge of the 23rd Infantry Division's Sniper School in Vietnam, most prospective sniper trainees were just "enduring" the class and gave the impression that they were there, not necessarily for the training, but for the opportunity to leave the field for two weeks. They were used to standard military classes where instructors fed them typical military smoke out of a book. In short, their attitude left a lot to be desired. I told them that within a week they would be getting first-round hits on man-size silhouettes at ranges 600 m or more, approximately 90 percent of the time with the sniper rifle. They were familiar with the M16 and its capabilities and had experienced the problems in hitting a target at 100 m. I sensed that they did not believe me.

By the time the course was a week old, they were getting first round hits as I predicted because my instructors were former competitive shooters and knew how to teach marksmanship. The transformation in attitude, which occurred almost overnight, was remarkable. They recognized the fact that the instructors were highly competent, professional, and capable of practicing what they preached. The instructors had gained their respect—something which was very unusual in Vietnam. By the time they graduated, they were better soldiers who were highly motivated, capable marksmen. They also had confidence in their rifles and how to use them. They were eager to return to the field to try out their newly learned knowledge.

If military marksmanship is to be saved, salvation will have to start at the top. Two major obstacles must be surmounted. The first is bureaucratic resistance to change and the second is the fact that most Army Officers and NCOs think they know rifle marksmanship. They do not know that they do not know. The attitude that prevails in the Army toward marksmanship and shooters must be changed and the result must be accepted and supported. Command emphasis is the key.

The best method to accomplish this would be to establish a career field for marksmanship. This would demonstrate the Army's commitment and support for the program.

Currently, there are hundreds of officers and enlisted men in marksmanship/marksmanship-related jobs throughout the Army who have little or no marksmanship experience. I estimate that there are approximately 1,700 ROTC shooting teams, the vast majority of which do not have experienced coaches. Further, there are marksmanship requirements in BCT, AIT, Weapons Committees, Post Range Control Organizations, staff assignments involving marksmanship/infantry small arms at all levels of command up to and including the Department of the Army, as well as marksmanship units at post, Army area and All-Army level. There are 2,000–3,000 assignments that require marksmanship-related expertise as a primary or secondary skill. If a marksmanship career field existed qualified personnel would have the opportunity to develop their talents, assist the Army in marksmanship related areas, be available at all levels to present qualified instruction, and be given the opportunity to advance in rank with their contemporaries. This would enable the Army to receive a sizable return on its investment in shooting and raise the overall proficiency in marksmanship for the combat soldier.

Because of lack of promotions and support for marksmanship-oriented jobs, the Army is losing its qualified experts. As Maj. Gen. Pickett wrote recently: "The Army cannot lose professionals with skills which we need critically just because some computerized pattern based on opinions of social scientists says that they do not fit the success pattern."

Within the framework of the career field, some sweeping changes in policy must be made, to revitalize and promote the program.

It is imperative that we re-emphasize and promote competitive shooting. Experience in marksmanship competition has a positive cumulative effect on proficiency. Competitive shooting promotes knowledgeable, and competent marksmanship instructors and coaches. We cannot afford to lose our competitively qualified instructors. The man who is both a combat veteran and a successful competitive shooter is most believable in communicating both the need to become a capable shooter and how to develop such capability.

Known-distance shooting should be reinstated at BCT and AIT level to complement combat firing. More range time should be allocated to rifle marksmanship training. Our soldiers are not learning the fundamentals, and what they do learn is not retained.

A meaningful, annual requalification for all units should be established. This qualification should receive command emphasis, and a system should be established for checking scores to insure integrity. There have been too many instances in the past where units have qualified with the "M1 pencil."

We need to re-emphasize the sniper rifle. It once again proved its usefulness in Vietnam. Although all American divisions had snipers, they were most effectively employed in the 9th Division in the Mekong Delta. Snipers accounted for 1139 killed in action in one seven-month period, January-July 1969.

Because of the short maximum effective range of the M16, we are developing an environment for sniper employment. The long-range effectiveness of the sniper rifle complements the short range of the M16. An enemy would have difficulty taking advantage of the short range of the M16 if the sniper and his rifle were effectively employed.

Although a new, more realistic course of fire for combat training needs to be established at the BCT level, a recent policy change for competitive shooting was a step in the right direction. The Army adopted a new combat-type competitive shooting program. The program includes two categories of teams, battalion/battalion-equivalent and composite teams. Competition include combat rifle, pistol, and two-man machine gun matches. In the battalion/battalion-equivalent category, shooters use unmodified unit weapons and standard-issue ammunition; only the winning battalion team from each installation level match goes forward to their respective Army Area Championships. Eventually the best battalion team in the Army is selected. They fire the combat course of fire only.

The composite team category uses match-grade weapons and ammunition and is the source for the Army Area's competitive shooters and for higher levels of competition. Their courses of fire include both combat and National Match (known distance) courses of fire.

The results of competition in combat shooting held at three FORSCOM Regional Matches and the All-Army Championships in 1976, point clearly to the lack of proficiency on the part of Army shooters in competition with the National Guard and Reserve. Overall, the Army won only 30 percent of the matches. The Guard won all eight of the battalion combat rifle competitions at the All-Army level.

Marksmanship proficiency has reached an all-time low in the Army. With the adoption of these recommendations, we could again become a true nation of marksmen and an Army of highly-motivated combat soldiers, each proficient in marksmanship and confident in his rifle and his own ability.

If we are to have the capability to win on the battlefield, we must heed the words of Army Chief of Staff Gen. Bernard W. Rogers, who has stated: "Marksmanship is an essential element of combat effectiveness; soldiers must not only be able to hit targets, but, just as important, they must also have confidence in their ability to do so."●

TRIBUTE TO SISTER MARY ROSALIE BRADY

HON. WILLIAM F. WALSH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. WALSH. Mr. Speaker, Sister M. Rosalie Brady is a very special woman in today's world. Her contributions to the field of education, to the central New York community, and to our neighbors the world over are numerous and varied. She has boundless energy and enthusiasm for every task she undertakes, and no matter how busy she is, the smile on her face never fades, and her grace and charm shine through to all who come in contact with her.

It is no wonder, therefore, that her many friends and colleagues will pay tribute to Sister Rosalie in Syracuse on May 16—a very special day for her, because it is the golden anniversary of her investiture into the Order of St. Francis.

As an administrator, as a scholar, as an educator, and most importantly, as a Christian, Sister Rosalie fills each role with a warmth and talent that we all admire very much. Her list of academic and community accomplishments are extensive, and topping the list is her current position as president of Maria Regina College in Syracuse.

Sister Mary Rosalie Brady was born Frances Joan Brady in Brooklyn, N.Y., the daughter of the late Owen Brady of County Cavan, Ireland, and Delia, Mason, County Tipperary.

She entered the order of the Sisters of St. Francis of Syracuse in 1927 and made her final profession of vows in 1933.

Obtaining both her undergraduate and masters degrees from the Catholic University of America, Sister Rosalie went on to get her Ph. D. in romance languages from that same university. She did post-doctoral work at the University of Havana in Cuba.

Sister Mary Rosalie was the recipient of a Fulbright scholarship to the University of Los Andes, Bogota, Colombia. She also received a French Embassy scholarship to attend the University of Grenoble, France, and a Federal grant under the foreign language education series program for modern language teachers, to study at Laval University in Quebec, Canada.

Besides her formal education, Sister Rosalie has traveled to Canada, South America, Europe, Central America, Cuba, Puerto Rico, and Hawaii.

She began her teaching career as a teacher of modern languages, in particular English and French, at the high school level. She moved on, however, to the administrative level, serving as vice principal of both Oswego Catholic High School in Oswego, N.Y., and Bishop Ludden High School in Syracuse, N.Y. At various times in her career, she also returned to the Franciscan Academy, the home base of the Order of St. Francis, and in 1965 took over the presidency of Maria Regina College.

Sister Rosalie is or has been an active member of more than two dozen educational, international, and community service organizations, among them the Business and Professional Women's Club of Syracuse, Zonta Club of Syracuse, United Nations Organization of Syracuse, Franciscan Community for Latin American Affairs, Catholic Renascence Society, National Association of Foreign Student Affairs, Who's Who in American College and University Administration, St. Elizabeth's Hospital Board of Trust-

ees, and the American Association of Presidents of Independent Colleges and Universities.

It is both an honor and a pleasure for me to have the opportunity to join in the community tribute to this most unusual woman. I wish her many more years of active service to mankind and the joy that such service brings. God bless you, Sister Rosalie.●

FDA—THE SNAIL WITH THE CLUBFOOT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. McDONALD. Mr. Speaker, while it is true that the FDA finally released the drug sodium valporate to the market for treatment of epilespy, it is also true that many other proven drugs are still languishing in the FDA's redtape machine while Americans suffer and wait. M. Stanton Evans recently wrote a very fine column on this problem in the National Review Bulletin for April 21, 1978, which I feel merits the consideration of my colleagues. As Mr. Evans points out the results of granting the FDA the right to decide the efficacy of drugs in 1962 has only been to slow down the development of new medicines in the United States and concentrate more power in the big drug companies, since the little ones cannot afford to bear the cost of the FDA regulations. The column follows:

AT HOME

The recent decision of the Food and Drug Administration to permit the marketing of sodium valproate is a belated concession to common sense, but only a beginning toward adoption of a rational drug policy in the United States.

Sodium valproate is the most effective drug now known to medical science for the treatment of epilespy, and has been successfully used in Europe for upwards of a decade. The Commission for the Control of Epilespy estimates that availability of the drug in the United States could prevent one million epileptic seizures annually. But until the recent turnaround of official policy, the drug was barred from the United States by the procedures of the FDA.

Senator Jesse Helms of North Carolina, who has been among congressional leaders in the effort to legalize sodium valproate, observes that the problem with this drug is symptomatic of a larger difficulty. He notes that there has been a general slowdown in the introduction of new drugs for epilepsy in this country, and of other medications also. Increasingly, this branch of medical science in the United States is lagging behind the British and other European nations.

This subject has been examined at length by Professor William Wardell of the University of Rochester School of Medicine. Professor Wardell points out that, "from 1960 to date, all except one of the 11 drugs introduced for epilepsy in the United States have been introduced first into Britain, by margins of up to 11 years. . . . Half of the drugs (for epilepsy) available in the United Kingdom are not yet available in the United States."

At the root of the problem are amendments to the Food and Drug Law adopted by Congress back in 1962, during the panic about thalidomide. In response to the agitation of that period, Congress charged the FDA with determining not only the safety of beneficial drugs (which it was already doing), but also the efficacy of such drugs in achieving their intended purpose. This, plus constant political/psychological pressures against the marketing of new drugs, has slowed to a crawl the introduction of chemical entities in America.

"Unfortunately," Helms observes, "the problem with sodium valproate is just the tip of the bureaucratic iceberg. . . . Fifteen years ago it generally required about two years and a little over $1 million to develop a new drug in the United States. Now it takes eight to ten years and up to $20 million. The U.S. is suffering from a serious drug lag imposed by bureaucratic red tape."

The time lag is confirmed by Professor Yale Brozen of the University of Chicago, who notes that because of the efficacy requirement and the proof demanded by the FDA that any particular drug measures up to it, the clinical trial period necessary for an acceptable new drug application (NDA) has been dragged out, on the average, for four additional years. Also, Brozen writes, "the time between filing and approval of an NDA has increased from seven months to 27 months." In toto, therefore, new drugs are reaching the U.S. market some six years later than they did under the pre-existing drug laws.

Confirming these assertions from a slightly different angle is Professor Henry G. Grabowski of Duke University. In a survey for the American Enterprise Institute (*Drug Regulation and Innovation*), Grabowski reviews a number of studies concerning the production of beneficial drugs before and after the '62 amendments, and shows that the annual rate of introduction of new chemical entities declined from 56 a year before adoption to 17 a year thereafter.

He also notes Professor Wardell's finding that, of drugs that were available in both the United States and Britain up through 1971, twice as many were introduced first in Great Britain as were introduced here. Grabowski suggests that the dollar cost of introducing a new drug in the United States has roughly doubled, and that U.S. "research and development 'productivity' declined almost six-fold between 1960–61 and 1969–70."

The FDA's response to all of this is that the American drug lag is simply part of a worldwide slowdown, and that we have not been denied "important" medications available elsewhere. Grabowski dissents from this conclusion, observing that while there has been a general tightening up on drug innovation in Europe since the thalidomide scare, the reaction has been nowhere near so great as in the United States, nor have the results been so clearly negative in terms of drug availability. (One interesting symptom of the difference is the fact that drug innovation in the Untied States has become very heavily concentrated in the larger drug firms since the 1960s, because the smaller firms can less easily afford the costs imposed by the FDA. In Great Britain, by way of contrast, the innovation process has become less—not more—concentrated.)

The FDA position that we have not been denied any "important" drugs is sufficiently answered, of course, by the case of sodium valproate, and could also be answered by reference to other medications including DMSO, treatments for high blood pressure, and medicines for asthma and hypertension which became available in Europe years before being cleared for marketing in the United States.

Against that backdrop, it's good news that sodium valproate has been decriminalized. It will be even better news when the FDA's ability to slow or halt the introduction of safe new drugs has been abolished altogether. M. STANTON EVANS.●

THE 1978 ACREAGE LIMITATION REPEAL ACT REINTRODUCTION

HON. BOB STUMP

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. STUMP. Mr. Speaker, tomorrow, May 3, 1978, I will introduce "The 1978 Acreage Limitation Repeal Act". Any Member who would like to join me and many other colleagues in sponsoring this piece of legislation may call my office befor the end of the working day.

H.R. 11944 will once and for all put to rest the problem we have been experiencing regarding the acreage limitation. The bill, purely and simply, is a comprehensive bill to repeal the 160-acre limitation and remove the residency requirement.

The Arizona State Legislature passed senate concurrent memorial 1003 urging the Congress to amend the Reclamation Act of 1902 to eliminate or modify acreage limitations and remove residency requirements relating to farm lands irrigated with water from Federal reclamation projects.

Below is this senate concurrent memorial:

SENATE CONCURRENT MEMORIAL 1003

To the Congress of the United States of America:

Your memorialist respectfully represents:

Whereas, in 1902, Congress enacted a Reclamation Act, 32 Stat. 388, to provide irrigation systems for farmlands in the arid West; and

Whereas, section five of such Act prescribed a limitation of one hundred sixty acres owned by an individual farmer eligible to receive irrigation water from a reclamation project; and

Whereas, section five of such Act limited sales of such land to bona fide residents residing in the neighborhood of such land; and

Whereas, such limitations have been only sporadically enforced by the United States Department of the Interior; and

Whereas, because of the lack of enforcement of such law, many people have acquired legitimate interests in land and water in excess of authorized limits; and

Whereas, the Department of the Interior, under court order, has proposed regulations which would strictly enforce the limitations in the future and force persons holding excess lands to dispose of them in a manner and to persons dictated by the Department; and

Whereas, under the proposed regulations, an owner of excess land would be forced to sell it for a price well below its true market value; and

Whereas, under the proposed regulations, an owner of excess land would be prohibited from even leasing back such lands after disposition; and

Whereas, because of inflation and the state of commercial agriculture, one hundred sixty acres is an unrealistic limitation on agricultural holdings to the point of being arbitrary and capricious; and

Whereas, many reclamation statutes provide exceptions to the acreage limitations and such lack of uniformity may raise constitutional questions; and

Whereas, reclamation systems on Indian reservations contain no such limitation even though most of such land is under long-term lease to non-Indians; and

Whereas, strict application of the limita-

tions at this late date will be clouded by litigation for years to come; and

Whereas, across-the-board application of the acreage limitation does not take into consideration substantial economic variations depending on the crop grown, the type of soil, the length of the growing season, the elevation and latitude of the land, the salinity of the water and many other factors; and

Whereas, the original purposes of the acreage limitation to distribute the benefits of reclamation projects, promote family farms and preclude speculation underwritten by Federal investments are now largely obsolete, moot or nugatory; and

Whereas, imposition of the residency requirement, not enforced since the Omnibus Adjustment Act of 1926, 44 Stat. 636, would work great hardship on many people who have developed alternative life-styles in reliance on Federal policy; and

Whereas, in the State of Arizona nearly thirty thousand acres of land would have to be transferred to comply with the proposed regulations; and

Whereas, the appearance of unpredictability of Federal policy may and the application of the proposed regulations would severely affect the marketability of all reclamation lands. Wherefore your memorialist, the Senate of the State of Arizona, the House of Representatives concurring, prays:

1. That the Congress of the United States amend the Reclamation Act of 1902 to eliminate the acreage and residency limitations contained in section five of such Act.

2. That, as an alternative to eliminating the acreage limitation, the Congress of the United States amend such Act to revise the acreage limitation substantially upward and to authorize acreage equivalency provisions to include consideration of farm economics, the cost of operation and viable farm sizes for all crops in all areas affected by the Act.

3. That the Secretary of State of the State of Arizona transmit copies of this Memorial to the President of the United States Senate, the Speaker of the United States House of Representatives and to each Member of the Arizona Congressional Delegation.●

THE NARCOTICS TRAFFIC AND DRUG ABUSE SEMINAR

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. GILMAN. Mr. Speaker, drug abuse in this country has reached epidemic proportions. Untold numbers of our citizens are resorting to a multitude of drugs and alcohol in an effort to escape from their personal ordeals. The courageous statement by Mrs. Betty Ford that she has become addicted to prescribed drugs and alcohol underscores the insidious dangers and damaging effects of combining psychoactive drugs with alcohol and the need for the public to become more aware of these dangers and to seek professional assistance. Mrs. Ford's brave battle against cancer, severe arthritis, and the excruciating pain of a pinched nerve and her determination to overcome drug and alcohol dependence should be an inspiration to citizens throughout the world who, for whatever reasons, have become dependent upon, or addicted to, drugs and alcohol. I know that my colleagues join with me in extending to Mrs. Ford our very best wishes for a speedy recovery.

In the United States alone, it has been conservatively estimated that narcotics trafficking amounts to an estimated $10 billion in gross annual sales and results in approximately $17 billion in drug-related crimes. According to some authorities, the number of narcotic addicts both in and out of treatment has fluctuated between 670,000 and 722,500 in the last 4 years. Approximately 4,000 of this Nation's citizens annually succumb to drug overdosages.

Preliminary reports from the Drug Enforcement Administration (DEA) indicate that in 1977 Federal, State, and local drug law enforcement agencies seized 888 pounds of heroin worth an estimated street value of $320 million, 1,624 pounds of cocaine worth approximately $164 million, and 2,137,492 pounds (or 1,068 tons) of marihuana worth an estimated $669 million on the streets. Last week alone, our drug law enforcement agencies arrested 38 individuals in Florida and Maine and seized more than 60 tons of marihuana worth about $47 million.

Obviously, the above statistics represent only a portion of the drug abuse prevention and control problem.

Mr. Speaker, on April 7th, I chaired the Narcotics Traffic and Drug Abuse Seminar held in Nyack, N.Y., in my congressional district, that was conceived and organized by one of my constituents, Mary Bianchini of South Nyack, together with a committee of citizens concerned by the growing spread of drug abuse throughout this Nation. The seminar was attended by nearly 200 citizens, local government and law enforcement officers and narcotics guidance counsellors concerned with problems of drug abuse prevention and control.

Mr. Speaker, it is vital, in our fight to stamp out drug abuse and drug trafficking, that we increase the public's awareness of the debilitating dangers resulting from drug abuse. Accordingly, I request that the full text of my remarks at the Narcotics Traffic and Drug Abuse Seminar be inserted at this point in the RECORD.

The remarks follow:

REMARKS BY CONGRESSMAN BENJAMIN A. GILMAN

I thank Mary Bianchini for her knd introduction and for taking the initiative in spearheading this program. I understand that for the past few months she has been hard at work arranging this seminar. You and the members of your committee deserve special thanks from all of us for the time and effort to make this event possible.

For the past six years in Congress and prior thereto, in the State legislature, narcotics trafficking and drug abuse prevention and control have been one of my major concerns. As a member of the House Select Committee on Narcotics Abuse and Control, a committee that I was pleased to help create, I have had the opportunity to become involved first-hand in the herculean problems confronting this Nation's drug law enforcing agencies in interdicting narcotics trafficking and eradicating the illicit supply of opium at its source

Permit me to take this opportunity for providing you with a thumbnail sketch of some of the national and international problems involving drug abuse and prevention and control: Drug abuse problems in this country have grown from the use of marihuana and LSD in the early 1960's to the current use of a multitude of dangerous drugs that include heroin, cocaine, a host of hallucinatory drugs, pain killers, amphetamines, barbituates, alcohol and combinations thereof.

What was once regarded as a drug problem limited to the United States has now reached epidemic proportions for both narcotic producer nations and narcotic user nations throughout the world.

Narcotics trafficking, drug abuse and drug addiction are no longer unique to our nation.

These problems now involve nations throughout the world affecting all of mankind. From Southeast Asia and the Middle East to Europe, and from Latin America to North America, drug abuse prevention and control has become a global problem. Narcotics trafficking has now graduated to highly sophisticated and organized international criminal syndicates.

It is difficult for the average citizen to perceive the magnitude and depth of narcotics trafficking. Permit me to briefly take you along our Southwestern border with Mexico, which our narcotics Select Committee inspected last spring. . . . a 2,000 mile border staffed by 1,077 Customs Inspectors and Border Patrol officers and 2,333 Immigration and Naturalization Service Agents. These 3,410 front line, dedicated men and women brace themselves against a tidal wave of humanity as more than 165 million individuals and more than 48 million vehicles cross that border each year. At one major port of entry, San Ysidero, California, located outside nearby San Diego, more than 38 million individuals and 5 million vehicles inundate approximately 224 customs officers and border inspection teams.

And that is just one area of this Nation's multi-sided border. Obviously, these figures do not include the complex and intricate problems of interdicting narcotics trafficking along the vast Pacific coastline from San Diego, California to Seattle, Washington, the entire United States-Canadian Border, the Eastern coastline running from Maine to Florida, the Gulf of Mexico, or the major narcotics trafficking centers located in the New York Metropolitan area, Detroit, Chicago, Miami or Los Angeles.

It is conservatively estimated that the domestic narcotics traffic nets 10 billion dollars annually . . . and the global narcotics activity (by highly sophisticated criminal organizations) far exceeds 10 billion dollars in sales throughout Europe, the Middle East, Southeast Asia, Latin America and Canada.

From 1969 through 1977, Federal, State and local law enforcement agencies in this country seized over 7,758 pounds of heroin worth over $2 billion, 9,071 pounds of cocaine worth more than $1 billion, and more than 6 million pounds (or 3,000 tons) of marihuana at a value of approximately $2 billion.

In 1977, 1,624 pounds of cocaine, worth an estimated street value of $164 million, was seized. Last year, law enforcement officials seized 2,137,492 pounds (or 1,068 tons) of marihuana worth an estimated street value of $669 million. These statistics do not include law enforcement seizures of other dangerous drugs and these seizures represent only a small portion of the narcotics making its way to our borders.

Obviously, illicit drug trafficking is big business. It has reached epidemic proportions for both heroin produced nations and heroin user nations. From the Golden Triangle of Thailand, Burma and Laos to Iran, Egypt and Mexico and the narcotics distribution centers of Berlin, Amsterdam, Miami, New York, Chicago, and Vancouver,

nations throughout the world are reporting increased usage of heroin, cocaine, marihuana and other dangerous drugs among its citizens. For example, Thailand reports a drug addict population estimated at 300,000 to 600,000; Iran 400,000; Egypt, 500,000; Mexico, 50,000. Among our citizens, the number of narcotics addicts both in and out of treatment has fluctuated between an estimated 670,000 and 722,500 in the last four years.

In Canada, heroin trafficking represents the fifth largest industry in British Columbia, grossing according to Canadian law enforcement officials "at least 255 million a year." British Columbia needs over 365 pounds of heroin smuggled into Vancouver to supply its addict population for a year, and 60 percent of British Columbia crime is drug-related. In this country, an estimated $17 billion is attributed to drug-related crime in addition to the $10 billion in narcotics trafficking operations.

Through its oversight hearings our Narcotics Select Committee has focused attention on the need for our Nation's law enforcement agencies to minimize their interagency rivalries and to intensify their efforts to cooperate and coordinate their activities in interdicting narcotics trafficking and in eliminating traffickers whose sophisticated and highly organized international criminal operations reap billions of dollars from the human misery that drug abuse imposes upon citizens throughout the world. In this regard, we recently witnessed the successful efforts by Federal, State and local law enforcement agencies to cooperate and coordinate their activities in obtaining the arrest and conviction of Leroy (Nicky) Barnes, formely known as "Mr. Untouchable," and his gang of 10 codefendents whose illicit drug operations yielded as estimated $200 million annually from heroin and cocaine trafficking.

Arthur Grubert, as a member of Director John Fallon's team . . . DEA's Region II team . . . that effectively contributed to the arrest and conviction of Nicky Barnes, may wish to comment on that case, but let us not be lulled into any sense of complacency as a result of the demise of the Barnes trafficking organization. There are hundreds of new drug traffickers more than ready to fill his shoes.

As a member of the Select Committee on Narcotics Abuse and as the ranking minority member of the House International Relations Subcommittee on Inter-American Affairs, I have also had the opportunity to visit Colombia, Ecuador, Peru and Bolivia and have seen at first-hand the intricate processes through which the coca leaf is grown, converted into coca paste, processed into cocaine and smuggled out of the hundreds of clandestine airfields and seaports of Colombia, where 70 percent of the total cocaine sold in the United States originates.

Drug abuse prevention and control is further spawned and complicated by the complex illicit financial transactions involved in narcotics trafficking. From our investigation of narcotics trafficking in Chicago, the Select Committee learned that the "Herrera connection," which controls the narcotics trafficking between Mexico and Chicago, involves a heroin trafficking business and the laundering of illicit financial transactions through currency exchanges in Chicago estimated at more than 1 billion dollars annually. The bulk of the laundered money flows from Chicago back to Mexico, the origina source of 70 percent of the heroin entering this country.

And, ladies and gentlemen, unfortunately we do not have to look too far from home, for there is also the problem of drug abuse in our own schools. Charles Schwep, Executive Director of the American Council on Marihuana and other Psychoactive Drugs, recently stated:

"Rockland County (N.Y.) has the dubious distinction of being substantially above the national average in the kind of drug abuse that is represented by the 'regular' use of marihuana. The estimate that 40 percent to 80 percent of Rockland's high school students smoke 'pot' regularly is supported by other studies. This is more than twice the national average."

There is also drug abuse in the military and drug abuse among the adult population. Clearly, this Nation is rapidly becoming a drug-oriented society . . . a society that is willing and unwittingly accepting and abusing drugs whether by over-indulgence in tranquilizers such as valium and quaalude or by excessive use of "uppers" and "downers." From pills mixed with alcohol to the excessive use of marihuana and cocaine, which are drugs of choice, dilaudid and the debilitating heroin, this Nation is fast becoming a nation of pill takers and drug abusers.

Permit me also to make a few brief remarks concerning the most dangerous, hallucinatory drug to hit the streets and infect our teenagers since LSD was so popular in the mid-1960's and the early 1970's . . . and that is phencyclidine, more commonly known as PCP or "angel dust."

PCP is a non-narcotic, synthetic, hallucinatory drug that can induce psychoses for the user and mimic the symptoms of schizophrenia. An estimated 7 million individuals, mostly between ages 12 and 25, have reportedly tried PCP, which has resulted in unpredictable behavior for the users: irrational violent behavior, delusions of grandeur, delusions of persecution, distorted perceptions, catatonic rigidity.

Unlike heroin, cocaine and some other dangerous drugs that involved intricate cultivation processes grown only in certain parts of the world and then manufactured, transshipped and distributed internationally by organized criminal syndicates, PCP can be manufactured in any part of the world by anyone who has an elementary knowledge of chemistry from readily available, over-the-counter chemicals.

This pernicious drug is easy to manufacture and comes in a variety of forms. It can be sprayed as a liquid or sprinkled as a crystal on marihuana, tobacco or parsley (in many instances without the user knowing what is being ingested). It can appear as a tablet, capsule or powder. The user can smoke, inhale, swallow or inject this hallucinatory product which induces unpredictable behavior that constitutes a danger to himself and to those around him. There are more than 30 derivatives that can be manufactured to produce PCP's psychoactive effects. Law enforcement authorities have attributed hundreds of murders, suicides, accidental deaths and bizarre self-inflicted injuries to PCP intoxication.

PCP is deadly. It can kill. It is the king cobra of hallucinatory drugs. That is what frightens me. With these dangers in mind, it is puzzling why so many of our teenagers are turning to this drug of choice. Last year, the DEA and the DEA task forces removed 3,518,000 PCP dosage units from this Nation's streets or more than twice the amount of the 1,713,000 PCP dosage units removed in 1976. And, that is only the tip of the PCP problem since not all cases of PCP intoxication are reported, and since this hallucinatory drug can masquerade as schizophrenia, cases of PCP abuse are frequently inaccurately diagnosed by medical personnel.

To help correct this problem, I have recently introduced legislation that would place PCP into Schedule I of the Controlled Substances Act, thereby providing the most stringent warning to the public regarding the dangers resulting from the use of this drug. Schedule I clearly states that any drug placed in that category is not medically accepted for treatment and that there is a lack of accepted safety in its use. Although PCP has not been approved medically for human treatment, it has been medically accepted as an animal tranquilizer. PCP is currently placed in Schedule II of the Controlled Substances Act, which classifies the drug as medically acceptable for treatment while warning that its use may lead to severe psychological or physical dependence.

My legislative proposal would also place mandatory minimum prison sentences of three years for anyone who unlawfully manufactures or sells this deadly drug as well as stringent mandatory minimum prison sentences for those who sell this drug to persons under 21 years of age.

Legislative proposals and new laws are not the full answer to drug abuse prevention and control. And more cops are not the answer. Legislators and law enforcement officials need your help if the "war" on drugs is to be won.

The public . . . the adult population and our teenagers, public officials and law enforcement officers . . . must become more aware of the extensiveness and danger resulting from drug abuse. There must be a massive effort at all levels of society, both nationally and internationally, to interdict, eradicate, educate, rehabilitate and treat the root causes (which we still do not understand) of drug abuse and to rid society of those who ruthlessly prey upon the victims of the sordid drug trafficking business. We must also learn why the young and the not so young, the rich and the poor . . . abusers from all walks of life . . . are turning to drugs as an escape from their problems.

We need more and better education, more programs, workshops and counselling centers on drug abuse prevention and control for both the youth of this Nation and for the adult population. An enlightened, informed citizenry is one of the most effective weapons against drug abuse and against the criminal drug traffickers who profit from this human misery.

In that regard, the Select Committee in its study of drug abuse in New York City schools found that more than 41 percent of the students in grades 7–12 who used drugs more serious than marihuana during the school year 1974–75 had not received any exposure to drug abuse prevention. This situation can, should, and must be corrected if our Nation is going to reduce the demand for illicit drugs.

Your help . . . the help of each and everyone of you . . . is vital and urgently needed if our Nation is going to incarcerate the drug pushers . . . the traffickers of human misery . . . and if the youth of this Nation and its adults are to learn the devastating and debilitating dangers resulting from drug abuse.

Ladies and gentlemen, I commend you for taking the time and making the effort to attend this seminar. There is so much work to be done in this field, particularly in educational and guidance programs and in more effective law enforcement.

I am pleased that joining us on this panel are John Bellizi and Arthur Grubert. John Bellizi's 35 years as a law enforcement officer has earned him a high regard among his colleagues and among the Members of Congress before whom he has frequently testified. Mr. Bellizi, who is the Director of the New York State Bureau of Narcotics Enforcement and Executive Director of the International Narcotics Enforcement Officers Association (INEAO), is a pharmacist and an attorney who 18 years ago founded the INEAO and has served on the Mayoral narcotics committees of the Wagner and Lindsay Administrations. Arthur Grubert, a dedicated law enforcement official who served the New York City Police Department for 30 years before

retiring as Chief of Inspectional Services, is the Associate Regional Director for Intelligence and Planning for DEA's New York regional office.●

ARMS SALE TO SAUDI ARABIA

HON. ELIZABETH HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Ms. HOLTZMAN. Mr. Speaker, as one who has consistently opposed the President's proposed "package sale" of war planes to Saudi Arabia, I would like to draw my colleagues attention to an important article by William Safire in the May 1 New York Times on this subject. The text follows:

WORD OF DISHONOR

(By William Safire)

WASHINGTON.—President Carter is reported to be icily furious at the Israeli Prime Minister for having the effrontery to object to the sale of the most lethal United States weaponry to Saudi Arabia. Mr. Carter suggests he is only carrying out a commitment made by his predecessor, making good America's "word of honor."

That turns both truth and honor on its head. Let's look at that secret deal:

According to an unpublished Senate Foreign Relations Committee study, in the late summer of 1976 "the Saudis received strong support in their bid for an advanced fighter aircraft from the State Department, especially from Secretary Kissinger and the Near East Bureau [Atherton] . . . President Ford accepted the State Department recommendation."

Think about that: In the midst of the United States Presidential campaign, while President Ford was publicly making new commitments to Israel's defense (since repudiated by Mr. Carter) he secretly sends word to the Saudis through Mr. Kissinger and Deputy Secretary William Clements in October 1976 that the United States will break precedent and sell the Arabs the means to destroy America's ally.

Mr. Ford said to me this weekend: "I did approve a commitment that we would favorably consider a sale to the Saudis of a fighter of their choice, with a right to veto that choice if we thought their decision was militarily wrong from our point of view."

The truth is that Gerald Ford deliberately withheld the facts from the American people about Arab arms sales in October 1976. Mr. Carter, who publicly opposed such arms sales in the campaign, has seized upon that secret agreement-in-principle and has constructed an enormous "commitment"—now quite specific and throwing away our veto right—to attribute to his predecessor.

On Friday of last week, Senator Howard Baker told Secretary Cyrus Vance to tell the President to stop claiming the Carter plan to sell 60 F–15 attack jets was a commitment made by President Ford: Instead, the Carter proposal is a vast escalation of a general promise made to the Saudis in secret, and stripped of the balancing pledges made in public to Israel.

The time is long past when any American President or Secretary of State can pledge America's "word of honor" in secret, withheld from the Congressional review and contrary to public opinion in the United States. Born in secrecy, this Carter escalation and distortion of a Kissinger bribe ought to be dishonored forthwith.

Contrast the secret deal with the open, publicly debated commitment to Israel. Withdraw from the strategic passes in the Sinai, Israel was told, and the United States will provide these aircraft to compensate for the loss to your security. The agreement was in writing, filed in the Congress. That is a commitment, a "word of honor"; and what has happened to it? Mr. Carter has now added a big "if," by linking the jets due to Israel with approval of the first lethal arms sale to the Saudis.

In coming weeks, Congress will change the Carter package around, giving some more planes to the Israelis, fewer to the Saudis, fiddling with delivery schedules. This entirely misses the point.

Selling Arabs the means to destroy Israel is a moral disaster for America. Let's stop kidding ourselves: The F–15 is the best airplane we build, and can park its missiles with uncanny accuracy in downtown Tel Aviv.

Oh, but that won't happen, we are told. The Saudis want the plan to match the planes we sell the Iranians, or to stand up to the advancing Cubans. Baloney: The United States can easily guarantee the Saudis against invasion by Cubans, without handing the Arab world the weaponry it needs to wipe out Israel.

The weakest justification is the Carter Morality-In-Arms-Sales Doctrine, which goes "if we didn't sell it to them, the French would get the business." The answer: Let them. If Frenchmen should decide to run the risk of having Israeli blood on their hands in any future war, that need not be the decision of Americans.

As long as the Saudis refuse to negotiate directly and as long as they are the financial backers of the P.L.O., it ought to be repugnant for any congressman to sell them American weapons. Israel is safe only so long as the Arab world thinks Israel cannot be beaten.

If moderate Arabs are sincerely concerned with the Soviet military threat in Africa, let them make the peace that is readily available to them with Israel. (1) Resuming the peace talks broken off by Egypt after only 36 hours; (2) expanding the talks to include Saudi Arabia and Jordan; (3) Making the agreement that both sides know is possible.

After the Congress sees that progress, after we can be assured that the weaponry would be used for self-defense, then—in public with congressional consultation, and in writing—the United States can give, and live up to, its "word of honor." ●

"OFFICER, WHAT SHOULD I DO IF . . . ?"

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. PEPPER. Mr. Speaker, I wish to call to the attention of our colleagues and all who read the CONGRESSIONAL RECORD an excellent article by an officer, Suzanne Tindall of the Dade County Public Safety Department, Miami, which appeared in the April 1978 issue of the FBI Law Enforcement Bulletin. Officer Tindall has written an outstanding article on the subject of sexual assault which I believe would be of wide interest. I include the text at this point:

"OFFICER, WHAT SHOULD I DO IF . . . ?"

(By Suzanne Tindall)

Sexual assault is a subject being addressed by professionals in law enforcement, medicine, psychology, and social work. Nonprofessionals, also, are speaking on the topic—neighborhood anticrime groups, feminist organizations, and commercial businesses promoting the sale of whistles, tear gas guns, and "quickie" self-defense courses.

In spite of great diversity in disciplines, these groups have reached general agreement on the correct proactive approach to reduce the incidence rate. To avoid an attack situation, the same measures advised for deterring robbery, burglary, and mugging are recommended for sexual assault. These precautions follow traditional "target-hardening" procedures—installing deadbolt locks and security alarms in residences; having adequate lighting in yards, parking lots, and along streets; and warning about the dangers of unlocked cars, hitchhiking, and encounters with strangers.

There is, however, great controversy regarding the correct reactive measures which should be employed in the event precautions fail and an attack is imminent or underway. Women are being told: "Scream," "No, don't show fear"; "Fight back," "No, try to talk to him"; "Be aggressive," "No, stay calm and cool."

The public is bewildered because "experts" and laymen write books, produce films, and give speeches which advocate opposing self-defense philosophies. Basically, tactics to avert an assault are considered to be "aggressive" or "passive."

Aggressive tactics are designed to frighten off the assailant. Proponents believe that a larger percentage of rapists are insecure—fearful of women and their own sexual inadequacies; that they coerce their victims by threats and intimidation; and that they are likely to flee in the face of aggressive reaction. Recommended resistance includes using karate, judo, and streetfighting techniques such as scratching, biting, kicking; carrying tear gas, hatpins, and nail files for weapons; or running, screaming, and blowing whistles. Feminists, martial arts instructors, and manufacturers of alarm devices and other paraphernalia are usually advocates of this methodology.

Passive techniques are intended to serve a dual purpose—to stall for time and to interrupt the offender's "fantasy trip" without increasing his level of anger. This philosophy is based on the premise that the attacker may be armed, that he is acting out of feelings of rage and hostility, and that aggressive reaction by the victim can escalate the violence and brutality of the assault. Examples of maneuvers in this category are: Talking and questioning, pretending to faint, urinating or vomiting, or crying and pleading. Victims' advocates medical and psychological personnel, are frequent proponents of this approach to encounter tactics.

Within law enforcement, the aggressive/passive dichotomy is especially evident. While many police officers are demonstrating streetfighting techniques to groups of women, others are telling audiences that it is far better to be a rape victim than the deceased in a homicide investigation. Departments with common jurisdictional boundaries frequently espouse contradictory tactics against sexual assault.

Police and other professionals are in general agreement on the proper procedures for investigations, evidence collection, treatment, counseling, and legislative reforms. Why, in spite of research and data collection, seminars and conferences, has argument on this one aspect of the crime not been resolved? Why do confused women continue to ask, "Officer, what *should* I do if . . . ?"

The reason is simple. While many rapists can be categorized as insecure/inadequate, many others belong to the rage/hostility group. Therefore, all tactics will work some of the time, but no tactic will work all of the time. Everyone is right and no one is wrong.

Research on the psychological motivations for sexual assault is sparse. It is frequently

based on subjective evaluation and often inconclusive. Although data indicates that approximately 2 percent are homicidal and psychopathic, no consensus has been reached on classifications for the remaining 98 percent. In addition to the insecure/inadequate and rage/hostility groups, there may be other major categories, as well as numerous subgroups.

Nonetheless, during a recent series of interviews with six convicted rapists, the men indicated that both aggressive and passive tactics had been employed against them with relatively equal success.

Each man was asked to relate the details of any specific instance in which his intended victim escaped being sexually assaulted. One said that the only time he fled rather than pursue the attack was when the woman "struggled and screamed." On the other hand, another stated that it was the victim's screaming and struggling which led to her death by strangulation.

Three of the six offenders found physical fighting to be a "turn-on," while two others were more incited by crying and pleading. One rapist ran from the scene when the woman angrily demanded, "What the hell are you doing in my car?" However, when another assailant was smilingly told, "O.K. honey, let's go," he admitted, "With that I split!"

As evidenced by this small sampling, everything and anything can deter an attacker—SOMETIMES. The same tactic will not affect two rapists in the same way. What works with one probaly will not work with another. Moreover, a specific maneuver may work for one victim but not another, even though used against the same attacker.

The ultimate conclusion to any encounter is largely determined by the circumstances and interpersonal dynamics between participants. Therefore, an attempt must be made to analyze three sets of contributory factors influencing an attack—the situation, the victim, and the assailant.

The situation. In any situation, the outcome may depend upon whether it is daytime or night; a deserted or populated area; with advance warning or a surprise attack; in a vehicle, open area, or a residence; in familiar or unknown territory; in connection with another crime or in a social context.

The victim. The victim's choice of tactics will depend upon her values and priorities, personality, age, and physical capabilities or limitations. For some women, the fear of severe physical injury is overwhelming and paramount; for others, the fear of being raped is stronger. Many women have shy, docile personalities, while others are aggressive and quick to vent anger. The elderly and children do not possess the strength and agility of young adults. For the handicapped, mentally retarded, and those under the influence of drugs or alcohol, the response range is severely limited.

The assailant. How he is perceived by the intended victim will greatly influence her reactions, and therefore, the eventual outcome of the attack. He may be a total stranger, casual acquaintance, co-worker, neighbor, or relative. He may be brandishing a weapon or be unarmed. He may be using strong-arm force, beating and striking her, or simply threatening verbally. He may be acting alone or with a companion or group.

Therefore, even though all tactics will work if employed in the right set of circumstances and conditions, attempting to determine which one should be used and when becomes an exercise of futility. The variables are too subjective and too numerous. They defy calculation.

For example: You advise a young, aggressive adult in good physical condition to put up active resistance if the assailant is unarmed. How is she to know? If awakened in the middle of the night, the intruder on top of her and tearing at her gown, will you be able to guarantee, either way, that she can make that crucial determination correctly? If face to face with the offender in broad daylight, can you assure her that he won't have a gun in his belt or a knife in his boot? Will he allow her to "frisk" him before deciding whether or not to fight?

If there are no unqualified statements that can be made about tactics to prevent sexual assault—no absolutes, no hard and fast rules to follow—then what role can law enforcement play in educating the general public? Should we simply plead ignorance, or avoid the subject of encounter tactics and stick to what we know best, the target-hardening approach to rape prevention? Certainly not!

Police officers have more credibility on this subject than any other professional group. Law enforcement agencies are the logical and proper source for crime prevention information, and moreover, may be the only viable channel for resolving the conflict. By accepting the responsibility, we can provide an invaluable service to other professionals, as well as to the general public.

Police departments can take the first step by acknowledging that at the moment of confrontation, no "expert" will be there to answer the victim's questions. She will be totally on her own, reacting within microseconds of the initial perception of danger. She will be the only person who can gage the situational factors, her own priorities, and have a sense of the attacker's level of violence. Examining and weighing these factors rapidly and under stress, her response will be selected instinctively rather than methodically. Nontheless, the intended victim is the best, and only, person who can decide which tactics to use. Although police can neither make the decision nor offer on-the-scene advice, they can aid and assist women in making appropriate choices by asking questions rather than providing answers.

The principle was established some years ago by Dr. Carl Rogers and is termed "nondirective" counseling. Based on the premise that solutions to personal problems must be formulated by the individual himself, the therapist's role is one of guiding the patient through an exploration of his options, leading him to identify and examine each alternative. According to "Rogerian" theory, the person will then evaluate the options and reach an appropriate solution. The process often requires the counselor to answer a question with another question.

When applying the theory to the question of rape prevention tactics, consider this example: Instead of asking whether or not she should fight, a woman tells you she intends to physically resist any assailant unless he has a knife or gun at her throat. However, after making this unequivocal declaration, she seeks official approval by asking, "That's all right, isn't it?"

Instead of answering the question, the nondirective approach would be to ask in return, "Since weapons are often concealed, how will you know whether or not he is armed?" Your question has served two purposes. It has given her a piece of information and also steered her into looking at the possibility previously unconsidered—the attacker's weapon might be concealed.

Even if we could present women with a set of maneuvers or guidelines to follow, there would be good reason not to do so. In spite of studying our expert advice, a woman might instinctively, automatically react contrary to the "rules," for instance, fight instead of pretending to faint, and if she were badly injured as well as raped, she might then experience unwarranted guilt and self-blame for not having "followed instructions."

Conversely, if the procedures we recommended were closely followed, but were unsuccessful in averting the assault, she might place the blame at the police department's doorstep, feeling antagonism and mistrust toward the very agency responsible for investigating her case.

Fortunately, law enforcement does not need to advocate a specific set of encounter tactics in order to educate the public. Instead, our rape prevention effort can be totally nondirective. This approach is not only logical, it is more viable and productive. In guiding audiences toward awareness of options and selection of their own appropriate alternatives, there are certain basic principles which can be outlined:

1. Fighting or verbal abuse increases one's chance of being injured or killed.

2. In any confrontation, it is easy to escalate violence but difficult to defuse it. Therefore, if passive/stalling tactics fail, a woman can try aggressive resistance. If, however, her initial reaction is one of aggression, she will not be able to resort to passive techniques if fighting fails.

3. Forceful resistance is relatively less dangerous if initiated during a preliminary period of interaction between victim and assailant, prior to the actual physical attack. Whereas, if an attack is launched without prior visual or verbal exchange, a physical counterattack will be more likely to increase her injuries without increasing her chance of escaping rape.

4. If the victim and assailant know each other, aggressive resistance is usually safer than if they are total strangers or have just met in a bar or other social situation involving drug or alcohol consumption. Behavior of total strangers and new acquaintances is the least predictable.

5. Overt demonstrations of fear can increase an assailant's anger. Many offenders indicate that screaming, running, crying, and pleading incite violence. It is interesting to note that the first two reactions are categorized as aggressive, the last two as passive.

6. Actions which increase the attacker's fear of being apprehended or identified can lead to a panic reaction wherein unintended, unwarranted violence is inflicted on the victim.

Police officers should share with the general public any data and information that may help women formulate their own tactical philosophy. For example, a 1975 Dade County sexual assault study indicated: (1) 55 percent occurred in residences; (2) 50 percent were perpetrated by someone known to the victim; (3) 50 percent involved the use of weapons; and (4) 15 percent occurred in vehicles. These are facts that may help women make decisions; there are others.

The vast majority of rapists do not intend, nor want to inflict, serious injury. Only one-fourth of rape victims suffer physical trauma and less than 2 percent face a life-threatening situation.

In 1976, Dade County victims ranged in age from 2 months to 91 years and included significant numbers of young boys and young men. The public needs to know that no one is immune—young or old, male or female.

It is necessary for law enforcement to "tell it like it is" on some aspects of the crime that are not warmly received by the younger female audiences. Primarily, there are three:

1. Hitchhikers and scantily clad women are prime targets, at least to most of the offenders interviewed by this writer. It may not be "right" or "fair," but it is a fact.

2. Some women send out conflicting messages and some men hear what they want to hear. Therefore, women should be told to say what they mean and mean what they say. Furthermore, they should be warned not to send out "body language" messages that conflict with either their words or true intentions.

3. If a woman knows the offender, passive tactics combined with no physical injuries are likely to jeopardize a court case. Women must know this in order to determine whether or not they want to fight.

Reluctance to emphasize facts which tend to offend feminists can have serious consequences in the courtroom and be self-defeating to the criminal justice system. Two recent cases illustrate this point.

Case A: In the spring of 1977, a Dade County judge directed a verdict of acquittal after a young woman admitted that she offered little resistance when a guidance counselor took her to his apartment and began making advances.

According to the girl's mother in a post-trial statement, "The week before this happened they showed a film at school telling the students . . . don't fight it, your chances of getting out with your life are so much better."

However, the defense attorney, in his successful bid for the directed acquittal, stated, "She made no protestation . . . there's got to be some lack of consent on the part of the victim. She didn't say anything."

An important point is illustrated: Even though a course of action is outlined as a possible alternative rather than a recommended choice, the probable results of that action must also be clearly stated. In this particular case, the victim and her mother had failed to realize that total lack of physical and verbal resistance might be interpreted in a court as being total acquiescence. Had she known this, she might have elected to refuse more aggressively. At least, she would have been more aware of the ramifications of her decision.

Case B: In Los Angeles, a court of appeal reversed a rape conviction in August 1977 on the technical ground of faulty jury instruction. In its opinion, however, the court stated that: "A lone female hitchhiker . . . advises all who pass by that she is willing to enter the vehicle with anyone who stops and, in so doing, advertises that she has less concern for the consequences than the average female. Under such circumstances, it would not be unreasonable for a man . . . to believe that the female would consent to sexual relations."

In her own testimony, the victim admitted that she cooperated in and initiated sexual acts after the driver became sexually suggestive. The defendant did not resort to physical force nor did he expressly threaten bodily harm.

Consequently, even though the victim might have feared that he would kill her, and the prosecution based its case upon implied threats from the situation in which she found herself, the court concluded that by entering the car willingly, she was responsible for making her lack of consent manifest.

This case illustrates the importance for: (1) Honesty about the probable consequences of exercising the "right" to hitchhike; and (2) frankness in telling women that convictions often hinge upon proving that lack of consent was clear, unequivocal, and adamant.

Many of the realities of rape prevention and prosecution do not seem "fair" to some women, and therefore, generate controversy. Nonetheless, police will be avoiding their responsibility if they do not provide these same women with candid, factual information.

To summarize, rape/sexual assault crime prevention programs can be handled most effectively by taking a dual approach—dividing the subject into two distinct segments—precautions and tactics.

In outlining precautionary measures, law enforcement can be directive and specific when recommending proactive measures to prevent being selected as a target for victimization. However, tactics to employ in the event precautions fail and an attack is imminent cannot be specifically outlined.

Even though no one can answer the question of what anyone else should do in a case of attempted rape, the public is floundering in a sea of conflicting advice, and it is only proper that police departments use their credibility and knowledge to resolve the confusion and endless debate.

To accomplish this, law enforcement can be the first professional group to:

1. Acknowledge that the intended victim is the *only* person who can know and weigh the elements of an attack situation;

2. Adopt the Rogerian nondirective approach which will allow, encourage, and even insist that each woman reach her own conclusion; and

3. Assist and guide women toward appropriate decisions through education and information about basic principles and data, including facts they may not want to hear.

Women who are knowledgeable and aware, women who have been encouraged to develop and act upon their perceptions and instincts, each according to her own needs and priorities, will no longer need to ask, "Officer, what *should* I do if . . .? ●

TRIBUTE TO HUGO BOSCHETTI

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. MILLER of California. Mr. Speaker, it is with great pleasure that I rise to call the attention of the House to honor the very distinguished career of a long-time personal and family friend, Hugo Boschetti. I had the pleasure, like so many other people, of calling him "Bosc" and coach when I played football under him at Diablo Valley College. It is with mixed emotions that I learn of his retirement from teaching. Those students who will not have the benefit of his guidance will be poorer for the lack of it.

Hugo Boschetti is a man with vision and a commitment to excellence in the education of America's youth. He has given this country a lifetime of service and is deserving of recognition.

Born in San Francisco on May 5, 1913, Hugo and his Italian immigrant parents quickly made Contra Costa County their permanent home. "Bosc," who excelled in the competition of football, basketball, track and baseball, graduated from Richmond schools in 1931. Undergraduate study began at Marin Junior College, where Mr. Boschetti further developed his achievements in football and basketball. Committed to health, self-discipline and athletics, "Bosc" decided to major in physical education and completed college at San Jose State. Before graduating in 1937, he began to teach physical education and coach football at San Jose High School.

Between 1938 and 1942, Hugh continued his studies at the University of California, while teaching physical education and science at Long Fellow Junior High School in Richmond, Calif. In 1942 "Bosc" was commissioned as an ensign in the U.S. Navy, where he attained the rank of lieutenant commander. He continued to expand his expertise in coaching at the Naval Air Station, Pensacola, Fla., and completed his tour of duty as athletic officer for the Naval Station of Enewich Atoll in the Marshall Islands of Micronesia.

Once again a civilian, Mr. Boschetti returned to teaching physical education and coaching at Alhambra High School in Martinez. While on the teaching staff of Alhambra, and later the community college, "Bosc" utilized his knowledge of athletics and education for the betterment of the community. He served as a distinguished member of the Martinez Recreation Commission.

After working for Contra Costa College to assist in the expansion of their football program, "Bosc" transferred to Diablo Valley College, where his knowledge of basketball and baseball was put into use. He initiated a very successful baseball program during the spring of 1951—and guided its achievement for 10 years. Mr. Boschetti was given the title, director of physical education and athletics in 1952. Using his understanding and experience of education, sports and people, "Bosc" built an entire department, from program offering to locker room. When he accepted the position of director, the college lacked all facilities necessary to teach athletics effectively. Due to this man's leadership, insight, determination and guidance, Diablo Valley has acquired a comprehensive program in physical education and athletics. He has not only been an excellent physical education teacher, coach, and athletic director, but his ability and desire to communicate with students has made him the "dean of students" in the athletic department, for athletes and nonathletes alike. Concern for the future prompted Mr. Boschetti to promote closer relations with the high schools in central and eastern Contra Costa County. His efforts have created an outstanding athletic climate.

Coach Boschetti is retiring from teaching this year. His achievements in the field of education and athletics are outstanding and far reaching. Hugo Boschetti has helped his community develop and grow towards its potential, and it is our duty to honor this man and his work.●

CIRCLE OF DEATH

HON. WYCHE FOWLER, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. FOWLER. Mr. Speaker, as a cosponsor of H.R. 12107, the bill to regulate the trapping of mammals and birds on Federal lands, I am deeply concerned about the many animals, birds, and even children that suffer injury from steel jaw traps. My decision to cosponsor this bill was in part influenced by a story written by Ms. Jeanie Franco Hallem for Atlanta magazine. The article, "Circle of Death," is an objective and fair examination of the pros and cons of the steel jaw trap, an issue that was recently raised in the State of Georgia, but a proposal to ban the traps was defeated by the State house of representatives. As the bill introduced by Mr. ANDERSON of California is now before the Committees on Merchant Marine and Fisheries, Interstate and Foreign

Commerce, and the Judiciary, I would like to extend my remarks in the RECORD to include the text of Ms. Hallem's article from Atlanta magazine:

CIRCLE OF DEATH

(By Jeanie Franco Hallem)

Sam's a cripple. He lost a leg to a steel trap. A prize-winning foxhound, Sam no longer competes for blue ribbons.

His plight is not singular. Thousands of animals, birds and, occasionally, even children, are unintended victims of powerful steel trap jaws in the United States every year. Some like Sam survive. Occasionally pain and panic are so intense animals chew away trapped limbs to free themselves. Others die of gangrene or shock or starvation. Some, lacking valuable pelts, are "trashed" by trappers.

Such suffering has prompted legislative proposals to make Georgia the ninth American state restricting use of steel traps. The bill was killed in a House committee earlier this year.

Opponents of the bill contend that tales of suffering distort an accurate perspective. Trapping, they argue, is necessary to eradicate destructive animals, regulate wildlife population and eliminate carriers of rabies and other diseases. Professional trapping procedures significantly reduce instances of maiming and unintended deaths.

Derry Stockbridge, an Atlanta environmental consultant, moonlights as a trapper. His sideline has developed into Wildlife Specialists Inc., which serves private citizens, timber companies, farmers and other businesses plagued by "nuisance" animals. The 29-year-old forester with a graduate degree in wildlife management says he's the only person in Georgia licensed to trap year-round.

"Folks pay me to trap pests: If I trap a dog or cat, I'll lose my job," he declares. His clients have bats in chimneys, raccoons in garbage cans, snakes in unlikely places. Timber companies employ him to trap wood-gnawing beavers, and farmers ask him to destroy foxes terrorizing hen houses.

Like most trappers, Stockbridge uses steel-jawed leghold traps 90 percent of the time. They're lightweight, inexpensive, and not easily lost or stolen. A steel trap (for a fox) sells for $3.25 and weighs two pounds. A Conibear or "kill" trap, which is used primarily in water, weighs three pounds and costs $6. The trap considered least likely to harm an animal weighs 32 pounds and costs $55; it's known as a cage, box or "live" trap. (Traps are routinely baited with game musk or urine.)

But not everyone is knowledgeable about steel-jawed traps. "Very few people trap the animal they're after," admits Stockbridge. Remember that famous Charles Pugh photograph of the Gwinnett County cat? The trap bit into its neck and the cat died of gangrene.

Stockbridge insists that an experienced, law-abiding trapper will prevent gangrene, half-eaten legs, starvation and death through proper trapping and procedures. "I check my traps daily, and I've never caught a fox that couldn't use all four legs."

But what about illegal trapping? The Atlanta Humane Society has been brought dozens of animals in traps in the last year. Only one trap was tagged—as required by law. The Society believes this lack of tagging is widespread.

Current Georgia law requires: That traps be checked every 24 hours; that traps be tagged with trapper's name; That the trapper obtain written permission to operate on private property; that he carry a "choke" stick (to release a trapped animal safely) and a .22-caliber weapon (to dispatch the victim) and that he have a valid trapper's license. It forbids trapping on public road or highway right-of-way and sale of cat or dog hide or fur.

Stockbridge reasons that the seasoned trapper is conscientious if he likes profits: "If you let the animal stay in a trap he'll escape or die."

And there's no market for rotten fur—even muskrat fur. J. W. "Bill" Murphree a Newman resident and Eastern Airlines pilot, found a muskrat that had been trapped at least 10 days.

Jim Morrison, Executive Director of the Georgia Wildlife Federation, believes that "humaneness applies only to domestic animals." Morrison and other opponents recently helped defeat Senate Bill 79, which would have restricted use of steel-jawed leghold traps to farmers for rodent control and use against "dangerous and destructive animals." They claim that only nonendangered species are trapped.

"That's ridiculous," says Bill Garrett, Humane Society Director. "There are photographs of everything from eagles to deer dragging traps around!"

There's no limit on the number of traps one can set, observes one fox hunter. "We have a bag limit; trappers don't." Mrs. Dorothy Gooch in a 1976 newspaper interview said that she had set out more than 500 steel traps within a 70-mile radius of her home. She said she could check all traps every three days or 200 per day. Leave an animal in a trap more than three days, she said, and it might chew its leg and escape!

Pain caused by trap pressure is said to be intense: Trapped dogs have been known to chew tree bark, says Sen. Floyd Hudgins of Columbus, who authored several bills to ban steel traps. "You put your hand in a car door for 24 hours," he challenges.

Dying in a trap takes "hours upon hours," adds trapping authority Frank Conibear.

"If the unfortunate animal is still alive when the trapper returns, the usual method of killing it is to stun the animal by hitting it on the nose with an object and then stand on its chest until it suffocates, or to use a 'strangle' stick, or to simply club the animal to death," reports the Women's auxiliary of the Atlanta Humane Society. (The animal is rarely shot since a bullet would damage its fur and decrease its value.)

An estimated 11 million wild animals are trapped in the United States annually, more than a half million in Georgia alone. Two out of three trapped animals are "trash" animals which are discarded by trappers for lack of commercial value, the report continues.

"The Humane Society people think I love the smell of blood," complains one trapper. "They think I'm a beast." His motivation is money: "Most folks trap for money, not sport."

The Georgia Game and Fish Commission reports that "only a handful" of trappers make annual incomes of $10,000 to $30,000. Terry Kile, Chief of Game Management, says trapping attracts students, foresters, "pulpwooders" (whose work is seasonal), young boys and the elderly. (One trapper is 86.) Most of these individuals trap for recreation and supplemental income. "If you catch nothing, you still feel good being with nature—not chained to an assembly line," explains a parttime trapper. "It's a chance to be Dan'l Boone on weekends."

Except in the hunting season. That's when many experienced trappers refuse to trap because they're more likely to trap a hound. And they fear retribution from hunters. One trapper warns, "You can kick their kids and kiss their wives, but don't hurt their dogs."

It's quite a dilemma. Full-time trappers "can't make a living 'cause they're 'hurting Bambi'," laments a Georgia outdoorsman sarcastically. "They're upset because people with no knowledge of trapping are telling them what to do."

Statistics on "Bambi" and friends are disturbing: In the Winter of 1972–73, 2,500 eagles were caught in leghold traps in Nevada. A four-year survey of trapping injuries made at Alabama's Wheeler National Wildlife Refuge disclosed that animals escaped by chewing off a paw, or pulling out a stake and escaping with the trap. Seventy-nine of 209 mink got away with crippling injuries; 137 of 429 raccoons; and 69 of 106 foxes. A three-year University of Minnesota study showed 54 birds of prey (including six bald eagles), 231 dogs and 89 cats were caught in leghold traps set for wild animals.

Because the steel-jawed leghold trap is nonselective—it cannot discriminate victims—it can just as easily catch a household pet or a small child.

In 1976 Dr. John Beary testified at a Canadian Conference on Trapping that one of his patients, a four-year-old girl, received a "crush injury to her right hand from a leghold trap; it disrupted tendons and required surgical repair."

Georgia Wildlife's Jim Morrison, who does not trap, says such reports are "greatly exaggerated. I let my kids play with a No. 2 trap," he says. "A dog can stay in a trap two or three days without serious injury."

Not according to Bill Murphree: His own dog Albert was badly hurt after less than 24 hours in an illegally set steel trap. Murphree had let Albert outside, as he did regularly. When the animal failed to return and his master's whistle brought no response—"You can hear me whistle five miles!"—Murphree knew Albert was trapped.

Gloved and booted, Murphree searched alone all night—in a 1976 ice storm. He found nothing. The next morning a neighbor joined him and by noon they found the animal—trapped, chained to a tree, mute with shock. "I had been within 30 feet of Albert three times" but never heard him bark or whimper. (After a long struggle an animal is frequently too exhausted to fight.) "His foot was cut through and the bone was exposed. The icestorm saved Albert's leg; the cold slowed his circulation and prevented gangrene."

They released the dog by covering his face with a jacket and holding him down. Like use of a "choke" stick, this procedure prevents a trapped and angry animal from attacking his rescuers. Albert was hospitalized at a vet's for one week; he wore a cast for one month. Total cost of treatment: $150.

Because of Albert, Bill Murphree became a "crusader" against steel traps. That's why he devotedly attended hearings on Senate Bill 79. At a recent Dalton hearing, the pilot was publicly threatened by a trapper against whom he had testified. (Murphree had caught him setting traps on property without permission; the traps were even tagged with the trapper's name.)

"He threatened to burn my house, beat me up and poison my dogs." Now the Murphrees keep their animals in the center of their 23-acre farm.

"Trappers try to catch anything they can sell. They're vicious!" charges Murphree. At one time eight dogs belonging to his neighbors were missing. After consulting the property owner, Murphree found three traps. The game warden found 11 more, but claimed: "I can't make a case against it; these people see trapping as a heritage."

It's also big business—for the trapper and the fur dealer.

Chris and Q. C. Plott co-own the 59-year-old Plott Hide & Fur Company in Griffin, Ga. Chris Plott says he grossed $4–$5 million regionally last year. The Plott's fur operation is the Southeast's largest. They ship to cities all over Europe and Asia.

The Game and Fish Division, Georgia Department of Natural Resources, reports that in 1976–77 Georgia did a $2 million business in furs, based on available statistics and fur dealers' reports, including the Plotts.' Accuracy of that figure is questioned: There may be "hundreds of furs no one knows about," says an Atlanta Humane Society representative.

A typical fine for trespassing and trapping without permission or name tags is about $25. A trapper can get $40–$60 for one fox pelt. Consequently, breaking the law is no great financial risk.

It's virtually impossible to check on trappers daily when a game warden is understaffed, underpaid and overworked in a high-risk job. "Everyone he comes in contact with is armed", says trapper Stockbridge. In fact the law requires a trapper to be armed (to kill the animal). Law enforcement for the game warden, on call 24 hours daily, is frustrating and dangerous work.

One trapper accuses some colleagues of irresponsibility: "They don't care if they catch dogs; they're giving us a bad name."

Dogs are not all they're catching:

A Game and Fish Commission source discloses that until this year, cat fur was sold for $3 per pelt. Frequently these cats were not trap victims but strays.

When a trapper was convicted of trapping a black bear, which is illegal game in Georgia, the judge fined him only $5.

Game authority Kile says "1,200 trappers are taking less than 10 per cent of the fur-bearing population on 32 million acres of wildlife habitat. That's not a drop in the bucket." Kile favors increased control of the beaver population. Although it has reached "critical" proportions, he would "never advocate beaver extermination," however.

While beavers chomp away at Georgia timber, bobcats and foxes terrorize chicken coops. Enter the professional trapper. In exchange for free pest control—most trappers are not paid a fee—he is permitted to keep valuable pelts.

The trapping issue has humanitarian, environmental, political, economic and emotional facets.

Trappers contend they eradicate destructive animals, regulate wildlife population, and eliminate carriers of rabies and other diseases. The modern trapper in this light is Orkin's rustic, outdoor counterpart—unlike the American pioneer, for whom trapping spelled survival. In early America furs and meat satisfied basic needs.

Today trapping is a lucrative sport that's "extraordinarily cruel and unnecessary," argues the Committee for Humane Legislation. "Little if any meat from trapped animals is eaten, and we no longer depend on furs and skins for protection and warmth. Fur garments are a luxury."

"We've outgrown trapping for survival," adds Sen. Hudgins. "With as much pain as there is, to inflict pain on animals is beyond my understanding. If we continue to allow a few people to rape the land of our animals, in 15–20 years those animals will be extinct."

The steel-jawed trap almost annihilated the American beaver population in the 19th Century, when trapping was unrestricted. This trap, the source of most of today's controversy, was invented in the early 1800s and has been modified little since. Here's how the Committee for Humane Legislation describes its action: "A ring of steel, hinged in the middle, rests on a powerful spring. When an animal trips the trap, the steel semicircles crash together to grab and hold the animal by a limb. The trap rarely kills. It cripples and imprisons until the trapper gets around to visiting his traps."

Trappers say that without steel-jawed leghold traps, rabies will be rampant. Some experts disagree. A National Academy of Sciences study found that "persistent trapping and poisoning campaigns as a means to rabies control should be abolished. There is no evidence that these costly and politically attractive programs reduce either wildlife reservoirs or rabies incidence."

Dr. William Winkler, Chief of Rabies Control at the Center for Disease Control in Atlanta, states that "shortly after rabies control programs were initiated, the outbreaks did stop. Retrospectively examined, these appear to be instances of good timing rather than good control programs; the epizootics (epidemics) probably would have stopped without any control measures being applied."

In states where traps have been banned, there have been no problems of predator overpopulation or rabies.

If Georgia trapping laws are revised, tightened, and enforced, it will be due largely to Sen. Hudgins, supporters in the Humane Society, various hunting groups and animal lovers. It took the Senator almost five years to pass a bill in the General Assembly regulating traps. Previously, two bills had been passed by the Senate and defeated by the House. Sen. Hudgins later introduced a bill restricting the steel-jawed leghold trap to farmers for rodent control. This bill was passed by the Senate and defeated earlier this year by the House Game and Fish Committee. It never got to the floor for a final vote.

The Atlanta Humane Society's Garrett polled members of the House on restriction of steel traps. "Seventy-five percent favor this bill," he says. "It irks me that my representative was not allowed to vote on it."

Those who favor the bill include fox hunters who have lost numerous hounds. To them trappers are competition. And a menace. Scott Roberts, Sheriff of Haralson County and President of the Five-Star Fox Hunters Club, reports having lost seven hounds to traps: Five disappeared, one died of gangrene, and one may have a permanent foot injury. To avoid such incidents, proponents of trap legislation suggest stiffer fines, more effective and less primitive traps and strict law enforcement.

Today steel traps are banned or strongly restricted in 34 countries and eight states.

U.S. Senate Bill 818 would outlaw interstate and foreign commerce in both steel traps and fur product. It's being studied by the Subcommittee on Resource Protection under the Senate Environmental and Public Works Committee. Senator John Culver (Iowa) is chairman of the subcommittee. H.R. 3516, cosponsored by 75 congressmen, prohibits interstate and foreign commerce on the fur product only; there would be no ban on commerce in traps themselves. Rep. Paul Rogers (Florida) chairs this subcommittee.

What are alternatives to the steel trap?

"Live" or cage traps are probably the least damaging, but they are costly and cumbersome. Also they're easily stolen, since they must be set above ground. Conibear or "kill" traps are usually put in water and can be washed away with rain, unlike steel traps which are buried in the earth. Padded leghold traps have rubber-coated jaws which decrease chances of mutilation. (They have been used by the City of Los Angeles, Department of Animal Regulation, for large wild animals—trap size No. 3.)

Tranquilizer tabs, which are wired to the trap, are still another method of injury prevention. The tranquilized animal will not struggle and harm itself.

The American Humane Association has offered a $10,000 prize for the past 40 years for a humane trap.

No one has won the award.●

NUCLEAR REPROCESSING IN THE UNITED KINGDOM

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. TEAGUE. Mr. Speaker, nuclear power is recognized by many nations as being essential to economic stability. Progress in the development of nuclear power in the United Kingdom is presently focused on reprocessing, a step in the fuel cycle which our administration has opposed. The British Secretary of State for Foreign and Commonwealth and the Secretary of State for the Environment have both issued press releases concerning the new reprocessing plant. The essential points of each press release are presented here for consideration:

HIGHLIGHTS OF DR. OWENS, UNITED KINGDOM SECRETARY FOR FOREIGN AND COMMONWEALTH AFFAIRS, MARCH 22, 1978, PRESS RELEASE

Nuclear power is required even though its misuse adds to the danger of destroying life once and for all.

The U.K. should reprocess fuel rather than store spent fuel.

The U.K. can best minimize the danger of nuclear proliferation by offering a spent fuel reprocessing service.

The U.K., through INFCE, hopes to "convert" the Carter Administration to their viewpoint on nonproliferation grounds.

The U.K. is not the center for spent fuel reprocessing; for example, France is contracting to reprocess spent fuel for Japan.

Reprocessing, where possible, should be restricted to nuclear weapon states.

Storage of plutonium is not new. BNFL stores plutonium belonging to foreign countries until those customers demonstrate the legitimate need for useful purposes.

"Nobody believes the present safeguards system is perfect." Efforts are being made through IAEA to strengthen and improve the system.

Storing of spent fuel will result in the growth of irradiated fuel volumes containing unrecovered plutonium which will become more accessible.

HIGHLIGHTS OF MR. SHORE, U.K. SECRETARY OF STATE FOR THE ENVIRONMENT, MARCH 22, 1978 PRESS RELEASE

Nuclear power is an essential component to the U. K. energy mix.

Reprocessing of spent nuclear fuel is not necessarily linked to fast breeder reactors.

BNFL would achieve its objective of limiting routine discharges to the environment from the reprocessing plant; a major accidental release of radioactivity is remote; and no significant risk exists from the transport of nuclear materials.

The verification process offers a promising solution to radioactive waste storage.

The plutonium and uranium contained in spent fuel represents too important an indigenous energy source to waste.

The U.K. recognizes the danger of terrorists' obtaining nuclear materials and cannot absolutely guarantee against this factor. However, the U.K. believes proven security measures will minimize this potential.

Reprocessing spent fuel from non-nuclear weapon states would reinforce nonproliferation.

Under INFCE there is no obligation under terms of participation (40 governments) to defer a decision on nuclear projects.

The immediate expectation, for the U.K. using conventional nuclear plants, is for a reprocessing plant of 600 tonnes per year.

Reprocessing can be carried out without any significant increase in radiological risks, environmentally it offers a better option than storing spent fuel, and the security risks can be contained in ways compatible with the democratic way of life.●

FINANCIAL DISCLOSURE STATEMENT

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1978

● Mr. BRADEMAS. Mr. Speaker, I am inserting in the RECORD today a copy of the financial disclosure statement I filed last week with the Clerk of the House as required by rule XLIV of the House of Representatives.

I also include here a supplemental statement covering my personal residence. This information is not required by rule XLIV but I include the information so that the public record may fully reflect my personal financial condition:

Asset: residence, Washington, D.C.
(assessed value)..... $141,749

Liability: mortgage, American Security & Trust Co., Washington, D.C. (outstanding principal).... 60,107

Net equity..... 81,642

U.S. HOUSE OF REPRESENTATIVES: FINANCIAL DISCLOSURE STATEMENT FILED PURSUANT TO HOUSE RULE XLIV

Name: John Brademas.

Office address: H-107, The Capitol.

Member of Congress: 3d District, Indiana.

Coverage Dates: October 1, 1977 to December 31, 1977.

Due Date: Not later than April 30, 1978.

PART I

A. Income—The source and amount of each item of income aggregating over $100 from any one source.

Source:

U.S. House of Representatives (salary), $14,375.00.

United Jewish Appeal (honorarium), $750.00.

American Federation of State, County & Municipal Employees (honorarium), $1,000.00.

B. Gifts—The source, a brief description or value of gifts of transportation, lodging, food or entertainment aggregating $250 or more from one source.

Source: None.

C. Other gifts—The source, a brief description, and value of all other gifts aggregating $100 or more from one source.

Source and Description: None.

D. Reimbursements—The source, a brief description or value of reimbursements, directly or indirectly, for expenditures aggregating $250 or more from any one source.

Source: None.

Note: For Parts II–V below, indicate Category of Value: Category I—Under $5,000; Category II—$5,000–$15,000; Category III—$15,000–$50,000; Category IV—$50,000–$100,000; Category V—Over $100,000.

PART II

Holdings—The identity and category of value of any property held, directly or indirectly, in a trade or business or for investment or the production of income, and with a fair market value of at least $1,000 as of the close of the year.

Identity:

25 shares GM common stock, Category I.

Savings accounts, Friendship Savings & Loan, Chevy Chase, Md., Category I.

PART III

Liabilities—The identity and category of value of any personal liability owed, directly or indirectly, which exceeds $2,500 as of the close of the year.

Identity: None.

PART IV

Securities transactions—The identity, date, and category of value of any transaction, directly or indirectly, in securities or commodities futures during the calendar year (beginning in 1978) which exceeds $1,000. (Not required in first filing.)

PART V

Real property transactions—The identity, date, and category of value of any purchase or sale, directly or indirectly, of any interest in real property which exceeds $1,000 in value as of the date of such purchase or sale.

Identity: None.

Part I A., Friendship Savings & Loan, Acct. #1013264–5, $65.29 interest.

Part I A., Friendship Savings & Loan, Acct. #1006468–1, $9.94 interest.

Part I A., GM common stock dividends, $81.25.

Part I A., Teachers Credit Union, $2.19 interest.●
